The following Process is inserted to gratify the curious in Geography and in some degree to convey an Idea of the Labour and Precision with which this Survey has been carried on and compleated. That the true horizontal Position of all the principal objects might be accurately ascertained, two Base lines each about ten Miles in length were carefully measured, one from St. Mary's Church in Warwick to St. Michael's Church in Coventry, the other on the Walling Street Way, from which Bases with an Instrument graduated with the greatest exactness. Observations were taken to the most remarkable circumjacent Objects, whose true Situation being thereby obtained, from them a series of Triangles was propagated thro the whole Survey the most eminent Places were determined by observation of three primary Stations and the directions and measure of the Roads, the course of the Rivers and Canals, and the situations of the intermediate parts by the Theodolite and Perambulator. The annexed Diagram shews the construction of the series of great Triangles where the circles of Degrees are expressed at each Station which will at any time prove the rectitude of this Map, either to Calculators or actual Observers.
