Figure S6. DSC curve of PDPFDE in N₂ atmosphere.

Figure S7. The SEM image of the char residue of PDPFDE under nitrogen at 700°C in muffle furnace for 30 min.

The Figure S7 represents the SEM image of the char residue of PDPFDE under nitrogen at 700°C in muffle furnace for 30 min. Based on the SEM image, we can clearly see the many nanowires existing in the char residue. However, the investigation of the detailed component and structure of the nanowires needs further study in the future.
