RECORD OF WELLS IN THE RUSKIN AREA OF HILLSBOROUGH COUNTY, FLORIDA

By
Harry M. Peek

INTRODUCTION

A detailed study of the geology and ground-water resources of the Ruskin area (fig. 1) was made during the period from 1950 to 1955, by the U. S. Geological Survey in cooperation with the Florida Geological Survey and the Board of County Commissioners of Hillsborough County. The results of this study are given in a report by Harry M. Peek entitled "The artesian water of the Ruskin area of Hillsborough County, Florida" and published by the Florida Geological Survey as Report of Investigations No. 21.

This report contains tables of well records that were compiled from data collected during that investigation. The well-numbering system used in the tables is based on latitude and longitude. The Ruskin area, which lies between 27° and 28° north latitude and 82° and 83° west longitude (fig. 1), has been divided into quadrangles by a grid of 1-minute parallels of latitude and 1-minute meridians of longitude, as shown on plate 1. The wells have been assigned numbers according to their location within this grid. Each well number consists of three parts: the first part is the latitude, in minutes, of the south side of the 1-minute quadrangle in which the well is located; the second part is the longitude, in minutes, of the east side of the same 1-minute quadrangle; and the third part is the number of the well within the quadrangle. For example, the number 43-25-4 designates the fourth well in the quadrangle bounded by latitude 43' on the south and longitude 25' on the east. The degree of latitude

and longitude are not included as a part of the well number, as they are the same for all wells used in this report. Well locations are described in table 2 and are shown on the map, plate 1.

TABLE 1.--RECORDS OF WELLS IN THE RUSKIN AREA.

Well no.: See text for explanation of well numbering system.

Location: See plate 1. Distances measured from post office or principal road intersection.

Depth of well: Reported unless noted; m, measured.

Principal water-bearing formations: A, Avon Park limestone; H, Hawthorn formation; O, Ocala group; P, Pliocene and Pleistocene undifferentiated deposits; S, Suwannee limestone; T, Tampa formation.

Use: D, domestic; I, industrial; Ir, irrigation; O, observation; OT, oil test; P, public supply; S, stock; U, unused.

Remarks: C, cuttings on file with Fla. Geol. Survey; E, electric log available.
