

UNIVERSITY OF SOUTHERN QUEENSLAND

IMPLEMENTING PROBLEM-BASED LEARNING IN SOFTWARE
ENGINEERING IN A SRI LANKAN UNIVERSITY

A Dissertation submitted by

Deborah Macan Markar, B.Ed. (Hons), Grad Dip Comp, M Comp Studies,

For the award of

Doctor of Philosophy

2010

Abstract

The study aims to identify the parameters of an optimal learning environment to promote the development of graduate attributes and higher order learning skills in the context of a professional preparation course for Information Technology graduates at a public university in Sri Lanka. It employs a design-based learning approach with iterations of the design being undertaken over a four year period. The underlying pedagogy for the design was problem-based learning. As students were unused to being challenged to apply their knowledge to the resolution of problems, a primary focus of the design was on scaffolding the learning experience. Significant use was made of eLearning tools available through the Moodle content management system for this purpose. In addition to this, course lectures were supplemented with tutorial sessions which provided lecturers with an opportunity to work through a series of skills building activities with the students. A key initiative was to enhance student exposure to industry through the use of videos, chat and discussion forums as well as through face-to-face meetings. As many students in the public university system come from the rural hinterland of Sri Lanka their experience of the industry they aspire to join is often minimal. One consequence of this is a lack of awareness of the importance of soft skills or graduate attributes to industry employers and a consequent lack of motivation to participate in learning activities directed toward building such skills. The study also identified a fundamental need to address the issues of general and cognitive academic language proficiency in English – the language of instruction. While a range of tools and approaches were used successfully to help students develop teamwork, communication, independent learning and problem-solving skills, it became clear that it was not realistic to target development of such skills within a single subject and without addressing the issue of English language proficiency first. As the approach to study was a departure from largely didactic teaching-learning styles to which students had previously been exposed, opportunities for them to reflect on their learning were essential. These were built into the course in the form of assessable assignments. The study concludes by recommending a whole-of-curriculum approach in the form of a framework for a further and more extensive trial of the approach.

CERTIFICATION OF DISSERTATION

I certify that the ideas, experimental work, results, analyses, software and conclusions reported in this dissertation are entirely my own effort, except where otherwise acknowledged. I also certify that the work is original and has not been previously submitted for any other award, except where otherwise acknowledged.

ACKNOWLEDGEMENTS

I would like to acknowledge the support of the academic and non-academic staff of the University of Moratuwa, Sri Lanka without whom this research would not have been possible. The Faculty of Information Technology generously allowed me full and unrestricted access to students and staff and supported me at every step from adopting the Moodle™ Content Management System for all courses to providing transport to allow students to attend focus group sessions. FIT have given their consent to disclose the results of this study in full in this thesis report. To the students of the Faculty of Information Technology who selflessly gave of their time and energy to provide feedback and improve their course for future students, I wish you well in all of your future endeavours and thank you for your support and cooperation.

I would also like to thank the Faculty of Engineering and Surveying at the University of Southern Queensland, Australia, for their time and support in shaping this research from its inception. In particular, I would like to acknowledge the contributions of Mrs. Lynn Brodie and Dr. Mark Porter. Similarly, I would like to acknowledge the contributions of the PBL unit at Temasek Polytechnic, Singapore.

Finally I would like to thank my supervisors, Dr. Jerry Maroulis (University of Southern Queensland) and Dr. Ajith Madurapperuma (University of Moratuwa) for their support and guidance. I would also like to thank Prof. James Cameron of the Northern Territory University for reading and providing feedback on the penultimate draft of this thesis.

Mr Gradgrind ... in Charles Dickens' book "Hard Times" saw his pupils as '...little vessels, there and then arranged in order, ready to have imperial gallons of facts poured into them until they were full to the brim' (Dixon 2000, p.38).

6.2	Results	115
6.2.1	An Explanation of the Concept Map	115
6.2.2	Year typified by high levels of student stress	116
6.2.3	Teamwork skills	118
6.2.3.1	Peer Assessment	121
6.2.4	Problem Solving skills.....	124
6.2.5	Communication skills	127
6.2.6	Independent learning skills	129
6.3	Discussion.....	134
6.3.1	Implications of the results for teamwork	134
6.3.2	Implications of the English Language Issue	135
6.3.2.1	Failure to facilitate code-switching	137
6.3.2.2	Failure to build CALP	138
6.4	Design for Phase III (2007)	140

CHAPTER 7 Analysis of Phase 3 (2007) and Implications for an Optimal Learning Environment	147
7.1 Results	147
7.1.1 Teamwork skills	151
7.1.2 Peer Assessment	153
7.1.3 Problem solving skills.....	155
7.1.4 Communication skills	157
7.1.5 Independent Learning Skills	160
7.1.6 Learning Preferences	165
7.1.6.1 Learning Styles.....	166
7.1.6.2 Preferred Learning Context.....	167
7.2 Discussion.....	168
7.2.1 Implications for developing teamwork skills.....	169
7.2.2 Implications for developing problem solving skills	172
7.2.3 Implications for communication skills	173
7.2.4 Implications for Learning	174
7.2.4.1 The need for an orientation program	174
7.2.4.2 Influence of learning styles	175
7.2.4.3 Student Pedagogical Preferences.....	177
7.3 Conclusion	178
CHAPTER 8 Conclusions – A Framework for Professional Education and Skills Training in Sri Lanka (PESTS)	179
8.1 Reflections on effective and ineffective approaches.....	179
8.2 Parameters of an optimal Learning Environment	181
8.2.1 Explanation of the Concept Map.....	184
8.3 PESTS Framework.....	186
8.3.1 Application of the Framework to FIT.....	188
8.4 Feasibility of Scaling-up the Model.....	191
8.4.1 Administrative and Management Support	192
8.4.1.1 Facilitation of team work	193
8.4.1.2 ESL Support	194
8.4.2 Curriculum and Instruction Support.....	195
8.4.3 Assessment Support Base	196
8.4.4 Policy Support Base.....	197
8.4.5 Technology Support Base.....	198
8.5 Recommendations for future study	198
