PRESENTATION SUMMARY

- General Background
- Why Rigid (Survey Accurate) Coordinate?
- Why Geocentric Datum?
- Why Least Squares Technique?
- Whole to the Part Concept Revisited
- CCS Definition, Conceptual and Implementation Models
- CCS Study Framework
- Overview of CCS Pilot Project in Melaka
- The Way Forward

ISG 2005, 27-29 September 2005, Park Royal Hotel, Penang

2

Objective of Cadastral Surveys

In Peninsular Malaysia, cadastral surveys are primarily concerned with the determination or definition of property boundaries, through their marking and description, and the preparation of associated plans and maps, for purposes of alienation and conveyancing. The system as practised is one of fixed and defined boundary whereby parcel definition is by the officially emplaced and mathematically coordinated boundary marks.

The main objectives of conducting cadastral surveys that had been promulgated in the early days of its practice have since been continually adhered to and later came to be adopted as amongst the principal functions of DSMM. They were stated in the *Survey Regulations (DSMM, 1976)* as follows:

- (a) *To provide evidence which will completely and permanently identify the land conveyed by any title issued by government.*
- (b) *To compile and make available records of alienation necessary for intelligent land administration."*

Ahmad Fauzi Nordin (2001)

ISG 2005, 27-29 September 2005, Park Royal Hotel, Penang

3

The spirit of Coordinated Cadastral Survey as described in Survey Regulation 1976

Survey Regulations Semenanjung Malaysia 1976...
APPENDIX VIII: INSTRUCTIONS FOR COMPUTERS

4. Coordinates

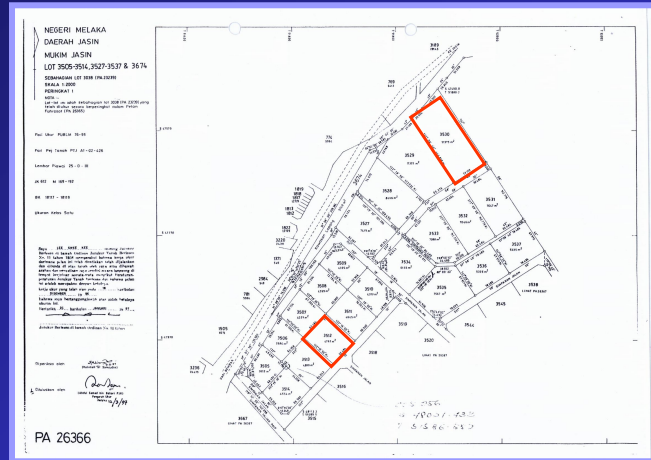

- 4.1 The general scheme of computation is based ultimately on the coordinates of trigonometrical stations and that the purpose of standard and control traverses is to confine errors and to prevent their accumulation. Coordinates must be computed and adjusted accordingly.
- 4.2 Cadastral survey coordinates are of two kinds:
 - 4.2.1 **Rigid Coordinates** required for controls and the external boundaries of new surveys extending the *coordinated area*.
 - 4.2.2 **Plotting Coordinates** used for subdivisions and in areas enclosed by rigid coordinates.

ISG 2005, 27-29 September 2005, Park Royal Hotel, Penang

4

PROBLEM STATEMENT 1: LACK OF APPROPRIATE TECHNOLOGIES PRIOR TO 1990's HINDER THE APPLICATION OF RIGID COORDINATES

- Practical implementation of cadastral survey is to avoid cadastral boundary overlapping problems rather than to enforce Survey Regulation requirements on coordinates

ISG 2005, 27-29 September 2005, Park Royal Hotel, Penang

5

CONSEQUENCES: DIFFERENT TYPES OF CADASTRAL COORDINATES

RIGID COORDINATE

Homogenous and Systematically Adjusted

PLOTTING COORDINATE

For cadastral map plotting purposes

SYSTEM COORDINATE

System/Software generated coordinate based on features location

Rigid Coordinate

Plotting Coordinate

System Coordinate

ISG 2005, 27-29 September 2005, Park Royal Hotel, Penang

6

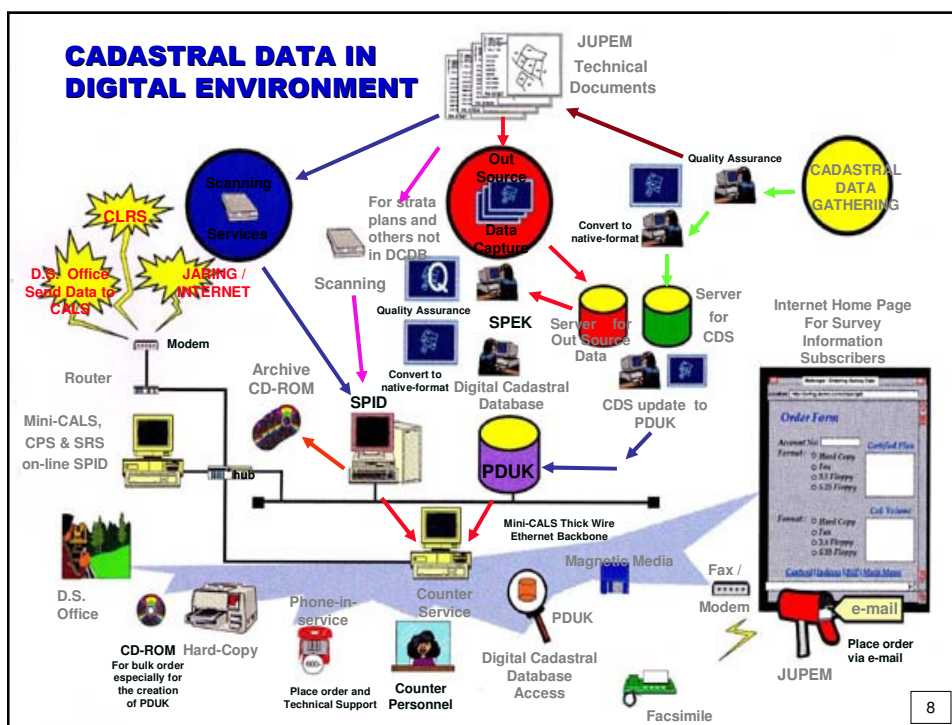

CONSEQUENCES: UNCONTROLLED ERROR PROPAGATION IN COORDINATES

Simple linear error propagation based on 1st and 2nd class cadastral survey

DISTANCE (km)	1:4,000 (0.25m/km)	1:8,000 (0.125/km)
0.1	0.025	0.010
0.5	0.125	0.063
1.0	0.250	0.125
2.0	0.500	0.250
5.0	1.250	0.625
10.0	2.500	1.250
20.0	5.000	2.500
50.0	12.500	6.250

ISG 2005, 27-29 September 2005, Park Royal Hotel, Penang

7

Boundary Mark Layer in DCDB

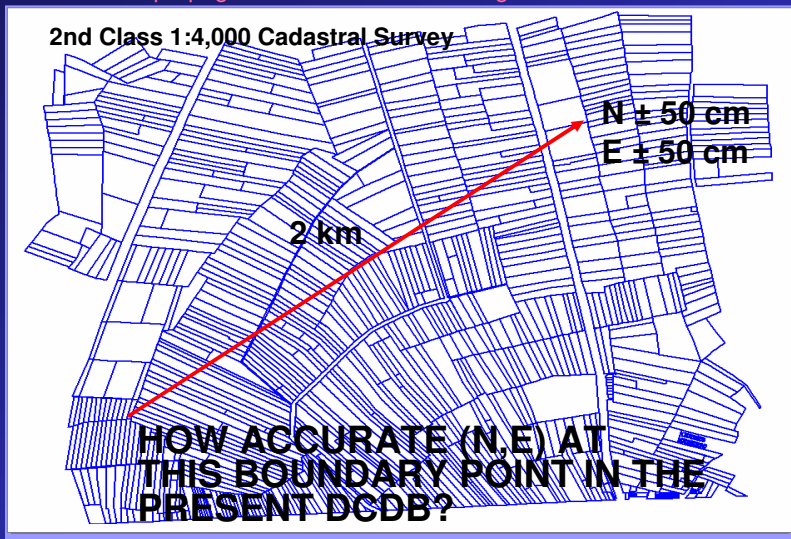

The screenshot shows the ArcView GIS interface with a map of boundary marks (red dots) and an attribute table titled "Attributes of Str.shp". A red oval highlights a row in the table corresponding to a specific point.

Shape	Pointno	Accession	Mark_desc	Serial	Current_date	X_coord	Y_coord	S_comments	Status	ID

How Accurate?
cm? m?

ERROR PROPAGATION

Effect of error propagation on coordinates in digital cadastral database

Consequences: Graphical Coordinate Error

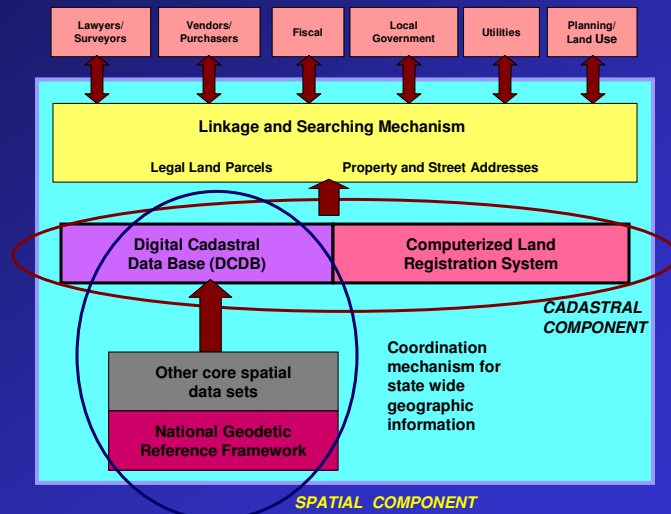

- Results in non-uniqueness of coordinates of the same boundary point

ISG 2005, 27-29 September 2005, Park Royal Hotel, Penang

11

CADASTRAL MODEL: The role of cadastre in a state's spatial data infrastructure (Source: Ian Williamson)

ISG 2005, 27-29 September 2005, Park Royal Hotel, Penang

12

Problem Statement 2: Geodetic Datum Inconsistencies

- Different Geodetic Datum Used In Cadastral System In Peninsular Malaysia

ISG 2005, 27-29 September 2005, Park Royal Hotel, Penang

13

Consequences: Hinder Integration of Spatial Data At National Level

- Multipurpose cadastre underpin a good Land Information System (LIS)

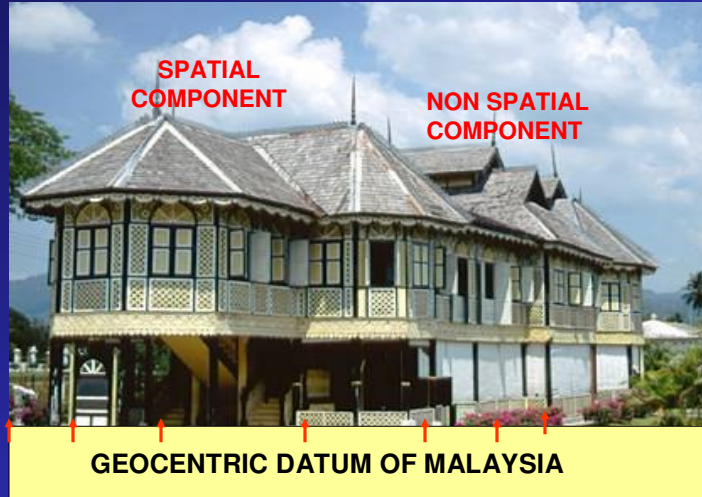

LAYER	AGENCY
A - Parcel B - Zon	Jurukur, Pejabat Tanah & Jabatan Ukur dan Pemetaan
B - Zon	Majlis Daerah
C - Saliran	Jabatan Parit dan Saliran
D - Kawasan Paya	Jabatan Parit dan Saliran , Perhutanan
E - Utiliti	Majlis Daerah, Syarikat Utiliti
F - Tanah	Pejabat Tanah dan Galian
G - Rujukan Geodetik	Jabatan Ukur dan Pemetaan
H - Tindakan Keseluruhan	Kombinesi lapisan-lapisan

ISG 2005, 27-29 September 2005, Park Royal Hotel, Penang

14

Solution: GEOCENTRIC DATUM OF MALAYSIA

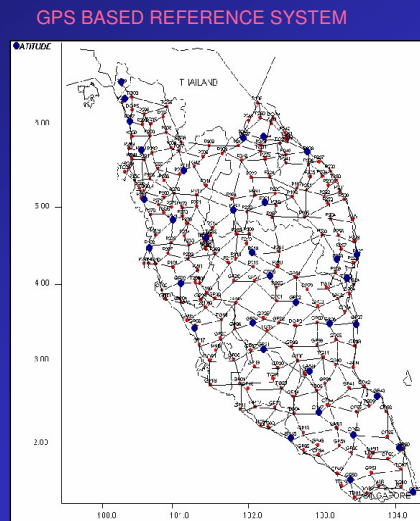

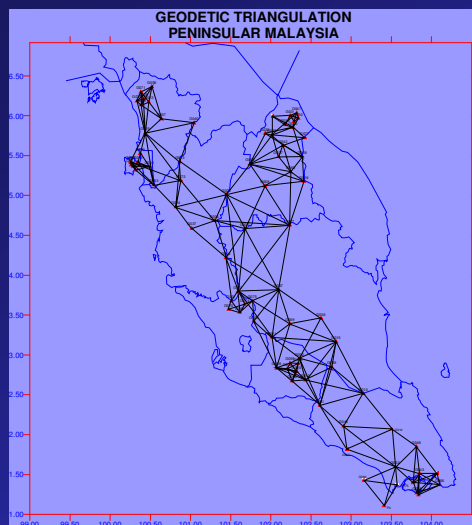

- Homogenous and accurate geodetic datum based on GPS technology

ISG 2005, 27-29 September 2005, Park Royal Hotel, Penang

15

OLD AND NEW GEODETIC INFRASTRUCTURE:

ISG 2005, 27-29 September 2005, Park Royal Hotel, Penang

16

Problem Statement 3: Non Rigorous Adjustment Technique for Coordinates Computation

Bowditch

STATION NUMBER 2 : 0.036m/ 42.01.10							

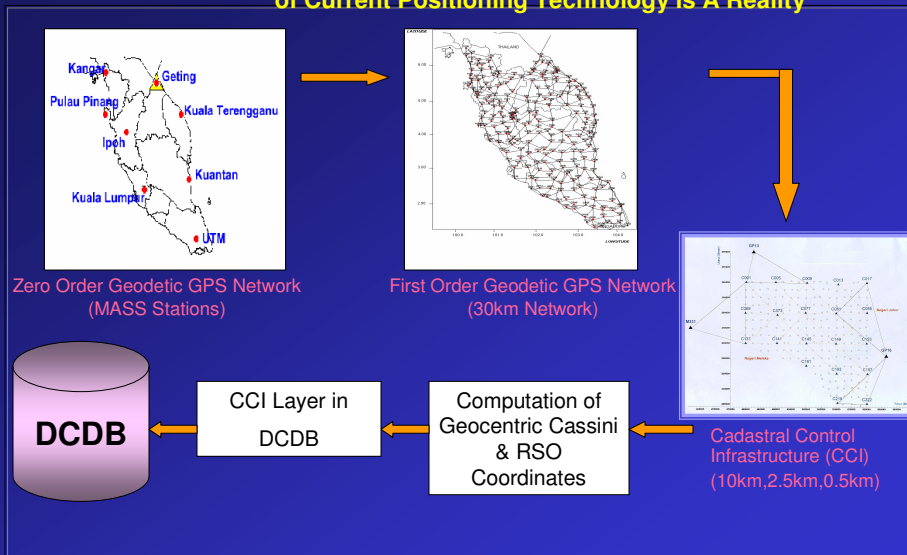

Bowditch adjustment distributes closing errors linearly but not able to provide a unique coordinates solution.

Least Squares

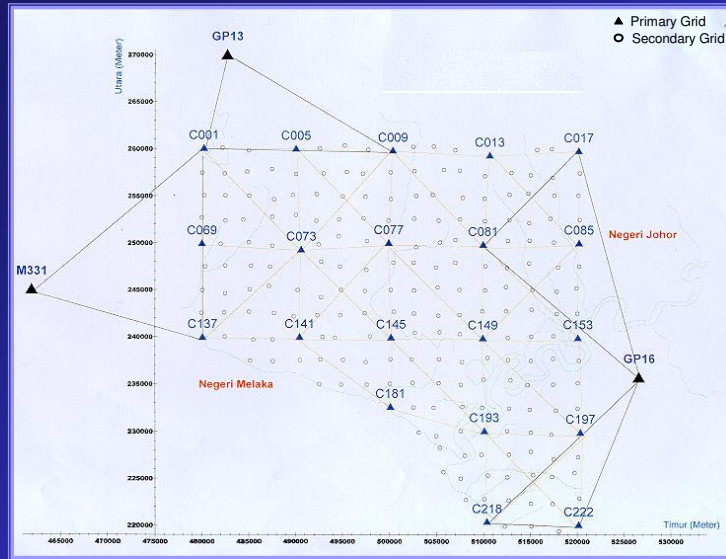

Least Squares adjustment technique determine a unique set of coordinates for each boundary mark from a set of observed values (bearings & distances).

Problem Statement 4: Whole To The Part Concept With The Aid of Current Positioning Technology Is A Reality

Solution: CADASTRAL CONTROL INFRASTRUCTURE (CCI) EMPLOYING WHOLE TO THE PART CONCEPT & GPS TECHNOLOGY

ISG 2005, 27-29 September 2005, Park Royal Hotel, Penang

19

Coordinated Cadastral Survey System: *Rigid Coordinate Revisited*

Wolfgang Effenberg (Phd Thesis, Uni. Of Melbourne, 2001)

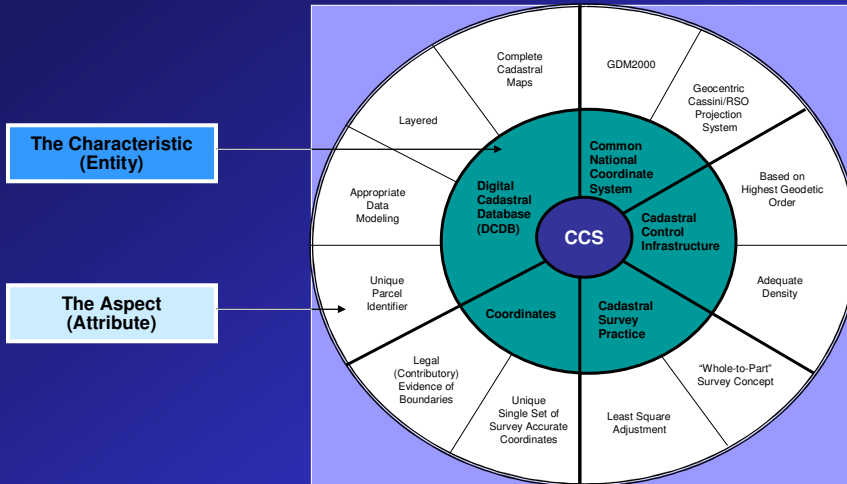

"In the survey accurate cadastral map the coordinates determined by survey are used to define the digital parcel boundaries. This requires a state coordinate system and sufficient density of control, along with the necessity of additional control as large areas are opened for subdivision. This is termed a fully coordinated cadastral survey system and is the most common understanding of coordinated cadastre.

The digital cadastral map update is tied closely to the land subdivision process and the cadastral system ensuring the continued integrity of land registration. The derivation from survey data means that the boundary coordinate accuracy, in urban areas, should be ± 0.03 meters or better, with respect to the nearest survey control; generally the level of accuracy decreases in rural areas."

ISG 2005, 27-29 September 2005, Park Royal Hotel, Penang

23

ACCURACY STATEMENT FOR CCS

The two major tasks in CCS implementation:

- REPOPULATING DCDB WITH SURVEY ACCURATE (RIGID) COORDINATES, and
- NEW COORDINATED CADASTRAL SURVEY

MUST satisfy the following boundary coordinates accuracy:

CATEGORY	$\sqrt{\left\{ \sum_{i=1}^n \Delta x_i^2 \right\}} \parallel \sqrt{\left\{ \sum_{j=1}^m \Delta y_j^2 \right\}}$	$\sqrt{\left\{ \sum_{i=1}^n \Delta x_i^2 \right\}} \parallel \sqrt{\left\{ \sum_{j=1}^m \Delta y_j^2 \right\}}$
Urban/ New Development	< ± 5 cm	< ± 5 cm
Semi Urban/Rural	< ± 10 cm	< ± 10 cm

ISG 2005, 27-29 September 2005, Park Royal Hotel, Penang

24

26

OVERVIEW OF MELAKA CCS PILOT PROJECT

PROJECT OBJECTIVES

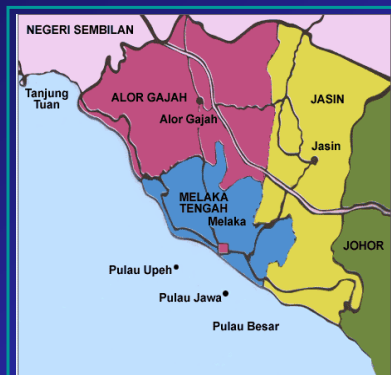

1. To enhance the methods and techniques of developing Cadastral Control Infrastructure (CCI) and to develop CCI layer In DCDB,
2. To refine the techniques, methods and prototype for the re-population and re-coordination of Digital Cadastral Database,
3. To strengthen the practice of cadastral survey in order to cope with the CCS environment,
4. To perform an assessment of the economic implications of CCS by conducting a Cost-Benefit-Analysis (CBA) study.

The Way Forward

In view of the successful implementation of the CCS Pilot Project in Melaka, we anticipate that JUPEM will address on the following issues in order for the CCS to be implemented for the whole of Peninsular Malaysia:

- Securing the budget for the implementation
- Preparation of technical and organizational implementation plan for Peninsular Malaysia
- Formation of Implementation Team
- Execution of CCS project for Peninsular Malaysia

ISG 2005, 27-29 September 2005, Park Royal Hotel, Penang

37

Acknowledgements

We gratefully acknowledged the opportunity, trust, and support given by the Y. Bhg. Dato' Ketua Pengarah Ukur dan Pemetaan Malaysia throughout the duration of the study on the implementation of Coordinated Cadastral System for Peninsular Malaysia.

Special thanks go to Tuan Dr. Abdul Kadir Bin Taib, Tuan Muhamed Kamil Bin Mat Daud, Tuan Ahmad Fauzi Bin Nordin and not forgotten the late Mr Chia Wee Tong for all the guidance, encouragement and support given.

The financial support for the study by Board of Licensed Land Surveyors Peninsular Malaysia is gratefully acknowledged.
