<b>CHAPTER</b>	<b>TITLE</b>	<b>PAGE</b>
	<b>DECLARATION</b>	<b>ii</b>
	<b>DEDICATION</b>	<b>iii</b>
	<b>ACKNOWLEDGEMENTS</b>	<b>iv</b>
	<b>ABSTRACT</b>	<b>v</b>
	<b>ABSTRAK</b>	<b>vi</b>
	<b>TABLE OF CONTENTS</b>	<b>vii</b>
	<b>LIST OF TABLES</b>	<b>x</b>
	<b>LIST OF FIGURES</b>	<b>xii</b>
	<b>LIST OF SYMBOLS</b>	<b>xv</b>
	<b>LIST OF APPENDICES</b>	<b>xvi</b>
<b>1</b>	<b>INTRODUCTION</b>	
	1.1 Background	1
	1.2 Biomass	5
	1.3 Fundamental Combustion of Biomass	8
	1.4 Densification (Briquetting)	10
	1.5 Binding Mechanism	13
	1.6 Briquetting Technology	15
	1.7 Objectives and Scopes	18
<b>2</b>	<b>PREHEATING AND PROPERTIES OF BRIQUETTES</b>	
	2.1 Effect of Preheating	19
	2.2 Factors Affecting Strength and Durability	23
	2.3 Study on Combustion Characteristics	28

<b>3</b>	<b>METHODOLOGY</b>	
3.1	Raw Materials	33
3.2	Proximate Analysis	35
	3.2.1 Determination of Moisture Content	38
	3.2.2 Determination of Volatile Matter	38
	3.2.3 Determination of Ash Content	39
	3.2.4 Determination of Fixed Carbon	39
3.3	Calorific Value	40
3.4	Preparation of Mixture	41
3.5	Briquetting Process	43
3.6	Physical Characteristics of Briquettes	44
	3.6.1 Relaxed Density	45
	3.6.2 Compressive Strength	45
3.7	Study on Characterization of Combustion Process	46
	3.7.1 Stove and Other Equipment	46
	3.7.2 Stove Settings for Combustion Study	48
	3.7.3 Determination of Combustion Characteristics	48
	3.7.3.1 Combustion Rate	48
	3.7.3.2 Heat Release	49
	3.7.3.3 Ash Content	49
	3.7.3.4 Emissions	49
3.8	Summary of Experimental Procedures	50
<b>4</b>	<b>RESULT AND DISCUSSION</b>	
4.1	Calorific Value and Proximate Analysis for Raw Materials	52
4.2	Results for Different Mixing Ratio	54
	4.2.1 Physical Characteristics	55
	4.2.2 Combustion Properties/ Characteristics	57
	4.2.2.1 Gross Calorific Value	58
	4.2.2.2 Proximate Analysis	59
4.3	Results for Different Compaction Pressure	60

4.3.1	Physical Characteristics	61
4.3.2	Combustion Properties/ Characteristics	62
4.3.2.1	Gross Calorific Value	63
4.3.2.2	Proximate Analysis	64
4.3.2.3	Combustion Rate	66
4.3.2.4	Heat Release	69
4.3.2.5	Ash Content	70
4.3.2.6	Emissions	71
<b>5</b>	<b>CONCLUSION AND FUTURE WORKS</b>	
5.1	Conclusion	73
5.2	Future Works	74
	<b>REFERENCES</b>	76
Appendices	A-E	80-121

## LIST OF TABLES

<b>TABLE NO</b>	<b>TITLE</b>	<b>PAGE</b>
1.1	Primary commercial energy supply by source	5
1.2	Comparison of densification techniques for straw	12
1.3	Advantages and disadvantages of piston press technology	15
1.4	Advantages and disadvantages of screw press technology	16
2.1	Briquetting without preheating	21
2.2	Briquetting with preheating	21
2.3	Effect of moisture contents on compressive strengths	27
2.4	Technical characteristics of rice husk briquettes	30
2.5	Palm biomass generated in year 2005	32
3.1	Palm biomass generated in year 2005	33
3.2	Ultimate analysis of solid oil palm residues	34
3.3	Standard used for proximate analysis	36
4.1	Calorific values for raw materials	53
4.2	Emissions from combustion of briquette contains mixture of mesocarp fibre and shell (60:40)	71
4.3	Emissions from combustion of briquette contains Mixture of EFB fibre and mesocarp fibre (60:40)	72
A1-A3	Results of calorific values for raw materials	81
A4-A6	Summary of calorific values for raw materials	84
A7-A10	Summary of calorific values for briquettes with different mixing ratio (compaction pressure 7 MPa)	85

A11-A15	Summary of calorific values for briquettes contains mesocarp fibre and shell (60:40)	86
A16-A20	Summary of calorific values for briquettes contains EFB fibre and mesocarp fibre (60:40)	87
B1	Proximate analysis for raw materials	89
B2	Proximate analysis for different mixing ratio of EFB fibre and mesocarp fibre	91
B3	Proximate analysis for briquette contains mesocarp fibre and shell (60:40)	93
B4	Proximate analysis for briquette contains EFB fibre and mesocarp fibre (60:40)	95
C1-C4	Summary of compressive strength for different mixing ratio	100
C5-C9	Summary of compressive strength for briquette contains Mesocarp fibre and shell (60:40)	104
C10-C14	Summary of compressive strength for briquette contains EFB fibre and mesocarp fibre (60:40)	108
D1-D5	Summary of combustion rate and heat release for briquette contains mesocarp fibre and shell (60:40)	112
D6-D10	Summary of combustion rate and heat release for briquette contains EFB fibre and mesocarp fibre (60:40)	116
E1-E5	Summary of ash content for briquette contains mesocarp fibre and shell (60:40)	119
E6-E10	Summary of ash content for briquette contains EFB fibre and mesocarp fibre (60:40)	120

## LIST OF FIGURES

FIGURE NO	TITLE	PAGE
1.1	Energy prices for 1980-2030	1
1.2	Energy consumption by fuel, 1980-2030	2
1.3	Products from thermo chemical biomass processing	8
1.4	Biomass combustion cycle	9
1.5	Baled straw	11
1.6	Wood pellet	11
1.7	Sawdust briquettes	11
1.8	Binding mechanisms	13
1.9	Pressure versus relaxed density for briquettes	17
2.1	Screw press type	20
2.2	Effect of temperature on density of briquette	22
2.3	Shatter index versus ratio of biomass	25
2.4	Compressive strength versus ratio of biomass	25
2.5	Images of briquetting failure under compression	26
2.6	Effect of polyethylene content on ignition point	30
2.7	Ignition times of coal briquettes with different moisture content and ignition temperature	31
2.8	Burning profile of palm biomass briquettes	32
3.1	Production process for fibre industry	34
3.2-3.4	Image of raw materials	35
3.5-3.7	Equipment for proximate analysis	37
3.8	Calorimeter system at UTM, Skudai	40
3.9-3.11	Grinded raw materials	41
3.12	Mould of mixture	42
3.13	YASUI hydraulic hand press	43

3.14-3.15	Die sets for making briquette	44
3.16	Instron machine	45
3.17	Stove and mechanical balance	46
3.18-3.19	Equipment for combustion study	47
3.20	Experimental Procedures	51
4.1	Proximate analysis for raw materials	54
4.2	Image for Briquette with mixing ratio 80:20	55
4.3	Graph of relaxed density for different mixing ratio	56
4.4	Image of compression test	56
4.5	Crack on briquette after compression test	56
4.6	Graph of compressive strength versus weight percentage Of EFB fibre	57
4.7	Gross calorific value versus weight percentage of EFB	58
4.8	Result of proximate analysis for case of different ratio	59
4.9-4.10	Images of briquette produced	60
4.11	Relaxed density versus compaction pressure	61
4.12	Compressive strength versus compaction pressure	62
4.13	Gross calorific values for briquettes with different compaction pressure	64
4.14	Proximate analysis for briquette contains mixture of mesocarp fibre and shell	65
4.15	Proximate analysis for briquette contains mixture of EFB fibre and mesocarp fibre	66
4.16	Images of briquette combustion	67
4.17	Effect of compaction pressure on combustion rate	68
4.18	Effect of compaction pressure on heat release	69
4.19	Ash content for briquette contains mesocarp fibre and shell	70
4.20	Ash content for briquette contains EFB fibre and mesocarp fibre	70
A1-A3	Results of calorific values for raw materials	81
C1-C4	Compressive strength for case of different mixing ratio	98
C5-C9	Compressive strength for briquette contains mesocarp fibre and shell	101

C10-C14	Compressive strength for briquette contains EFB fibre and mesocarp fibre	105
D1-D5	Combustion rate for briquette contains mesocarp fibre and shell	110
D6-D10	Combustion rate for briquette contains EFB fibre and mesocarp fibre	114

**LIST OF SYMBOLS**

$T$	-	Temperature
$\dot{m}$	-	Mass burning rate or combustion rate
wt%	-	Weight percentage
$p$	-	Compaction pressure
$\eta$	-	Efficiency
$m$	-	Mass

**LIST OF APPENDICES**

<b>APPENDIX</b>	<b>TITLE</b>	<b>PAGE</b>
A	Calorific Values	80
B	Result of Proximate Analysis	88
C	Compressive Strength	97
D	Combustion Rate and Heat Release	109
E	Ash Content	118
