

11. Conclusion and Recommendation

This section provides conclusions and suggestions of this research work.

11.1 Conclusion

The application has a number of features which is useful for operating the task in PT. Telkom Surabaya Timur. Those are as follows.

- It facilitates cooperation among users in the planning process and construction of telecommunications networks.
- In addition, the user interfaces simplify the task among users. For example, the user does not need to memorize the NIK / Item Id when inputing the employee data / item name.
- Also, the application may help management in making decisions since it is equipped with some facilities, such as price benchmarking cooperative agreement, the percentage of weekly progress, and the remaining number of days of project implementation.
- Finally, the application may simplify and speed up reporting some of the processes of planning and construction of telecommunication networks.

11.2 Suggestion

In the future, the application may be developed as a tool to analyze vendors in completion of their work.
