ABSTRACT

Science is very important in our everyday lives. That is the reason why students have to learn science since the beginning of their primary school. However, many students find difficulties in studying science. Some experts believe that the use of multimedia software can help students in learning science. In this case, the creation of science learning aid software with multimedia capabilities can be useful for both students and teachers. With the software's capability of visualizing the objects, and enhancing it with animation and sound, students are expected to have better understanding. Based on the software's evaluation performed by the students and teachers, most respondents found that the science learning aid software are really helpful in studying science.
