ABSTRACT

Healthy are a situation and quality from body which function as natural with all factor descent and area which they have, spirit, and social which enable to every body who productive life in social and economy (undang-undang nomor 23 tahun 1992) according to (Notoatmojoyo 2005; 46) the meaning about healthy behaviour is people response forward stimulus or object which interconnected with health, sick, disease, and factor which gives influence to healthy, foods, drinks, and healthy service. Another words healthy behavior is all activity or people energy which can be inspected or can not be inspected that have connection with improvement of health conditions. From the meaning above we can see how important health in our life, because individual health is an apart of the important think which can support people success. People who health it can be has good activity and can be actualization in optimal without any trouble and feel sick, they can carry out the character and responsible to their selves and another people, besides people who getting sick can not do such as like that.

Well, the purposes of this research is to know the skill and behavior test on organ reproduction in students surrounding, it can be useful in theory as conformity for another researcher or another people who need the developing of another test. This research take location in FISIP UMM, with the reason this research can represent a half students from all faculty which exist in UMM.

Kinds of research that was used of this research is descriptive with qualitative approach for the research was used Snowball Accidental sampling technic. The method for taking the data in this research was used observation, interview and documentation. Data analysis taken from Milles and Huberman that are, data collection, data reduction, data presentation and take the conclusion. The result of this research indicate that the skill of students about healthy in organ reproduction is still low it can be show that source only know in nature about healthy on organ reproduction in apart or spread disease in organ reproduction in general students healthy behavior in keep the healthy on organ reproduction had showed in right way, although there are the differences behavior between one informant which another in keeping healthy on organ reproduction. Besides the information which can get from reading newspaper or from friends in activity to keep healthy on organ reproduction in between informant more disposed to use traditional medicinal therapist with the reason that traditional therapy is therapy in natural without chemistry besides, there are another informant choosing to use modern therapy with any reason that modern therapy more practice in how to use and easy together.
