

# #brfloodsfa & #17brsfa

In the Fall semester of 2016, I was part of an advocacy project from the School of Social Work. Together, my class and I provided donations to families affected by the 2016 Louisiana flooding in Baton Rouge, working in tandem with their Young Women's Christian Association Early Head Start program.

I personally implemented Google Drive into the project, publicly sharing a document from Baton Rouge's YWCA by use of a Quick Response (QR) code and a short link.

My research focus is that Information Communications Technology (ICT) can provide for communities affected by natural disaster, as evidenced from my work on the #brfloodsfa project.

- History of natural disaster .
- Response to natural disaster .
  - Role of ICT & VGI .
  - #brfloodsfa project .
  - Accomplishment .
  - Future of project .
