# How are teachers using networked technologies?

In 2015, more than 4000 Canadian educators were surveyed about their use of networked technologies in the classroom. The teachers reported that they are not only using networked technologies to deliver content to students, but to also empower students to make content of their own.

70+% More than 70% of teachers report that their students have accessed content through online videos

46% Nearly half of teachers report that their students have accessed content through video games

33% A third of teachers report that their students have accessed content through digital comics or graphic novels

38% Almost four in 10 students have created their own videos
