Doctor of Philosophy  
at the University of Adelaide  
March 4<sup>th</sup> 2011*

## ***Table of Contents***

Abstract.....	vii
Declaration.....	ix
Acknowledgements.....	xi
List of Abbreviations .....	xiii
List of Figures.....	xv
List of Tables .....	xix
1 Introduction .....	1
1.1 History of Electron Impact Ionization.....	1
1.2 Molecular (e, 2e).....	3
1.3 Ionizing Radiation.....	10
1.4 Charged Particle Track Structure Analysis.....	12
1.5 Summary of Thesis .....	14
2 Fundamentals of Electron Collisions.....	17
2.1 Overview .....	17
2.2 Elastic Collisions.....	17
2.3 Ionization.....	20
2.4 Defining Cross Sections.....	22
2.4.1 Single Differential Cross Section.....	22
2.4.2 Double Differential Cross Section .....	24
2.4.3 Triple Differential Cross Section .....	24

3	Experimental Techniques and Apparatus.....	37
3.1	Overview.....	37
3.2	Experimental Apparatus.....	37
3.2.1	The Vacuum Chamber.....	39
3.2.2	Molecular Beam Source.....	41
3.2.3	The Electron Source.....	44
3.2.4	Analysers and Detectors.....	47
3.2.5	Fast Timing Electronics and Computer Control.....	51
3.3	Experimental Techniques.....	53
3.3.1	The Coincidence Technique.....	53
3.3.2	Coincidence Energy Resolution.....	58
3.3.3	Alignment of Spectrometer.....	58
3.4	Experimental Calibration.....	60
3.4.1	Energy Calibration.....	60
3.4.2	Angular Calibration.....	62
3.4.3	Spectrometer Consistency.....	64
4	Formic Acid.....	69
4.1	Introduction.....	69
4.2	Sample Preparation.....	71
4.3	Binding Energy Spectrum.....	71
4.4	Angular Distributions.....	74
5	Tetrahydrofuran.....	81
5.1	Introduction.....	81
5.2	Sample Preparation.....	84
5.3	Binding Energy Spectrum.....	85
5.4	Angular Distributions.....	88
6	The Pyrimidine Bases.....	97
6.1	Introduction.....	97

6.2	Physical Characteristics .....	100
6.3	Elastic Angular Distributions .....	102
6.4	Binding Energy Spectrum .....	106
6.5	Triply Differential Angular Distributions .....	110
7	Conclusion .....	117
7.1	Summary of Results .....	117
7.2	Future Directions .....	119
8	Appendix A: Experimental (e, 2e) Data .....	121
8.1	Formic Acid .....	121
8.2	Tetrahydrofuran .....	123
8.3	Thymine .....	125
9	Appendix B: Experimental Elastic Data .....	127
9.1	Cytosine .....	127
9.2	Thymine .....	129
	Bibliography .....	131

## ***Abstract***

Experimental studies of radiation damage in living tissue indicate that it is not just the primary ionizing particle responsible for the bulk of the radiation damage, but also secondary species generated by the ionizing particle. There is much interest in how these secondary particles, commonly electrons, interact with bio-molecules and in particular DNA.

In this thesis, I report relative triple differential cross section measurements for the electron impact ionization of formic acid, tetrahydrofuran and thymine. Formic acid can be considered one of the simplest building blocks for biological systems, particularly in the formation of glycine and amino acids. Tetrahydrofuran is a simple ring structure that can be used as a good approximation to the sugar component of the deoxyribose backbone. Thymine, together with cytosine, guanine and adenine, are the DNA bases and their interactions with electrons are considered to be of great importance. Single differential cross sections for elastic electron interactions with cytosine and thymine are also reported.

## ***Declaration***

This work contains no material which has been accepted for the award of any other degree or diploma in any university or other tertiary institution to Christopher J. Colyer and, to the best of my knowledge and belief, contains no material previously published or written by another person, except where reference has been made in the text.

I give consent for this copy of my thesis when deposited in the University Library, being made available for loan and photocopying, subject to the provisions of the Copyright Act 1968.

I also give permission for the digital version of my thesis to be made available on the web, via the University's digital research repository, the Library catalogue, the Australasian Digital Theses Program (ADTP) and also through web search engines, unless permission has been granted by the University to restrict access for a period of time.

## ***Acknowledgements***

There are many different organisations that have supported me during my PhD for the last four years that I would like to acknowledge. I would also like to take this opportunity to acknowledge a number of different people, who without their support and assistance this thesis would not be possible.

Firstly I would like to acknowledge the financial support of an Australian Postgraduate Award and further financial support from the Centre for Antimatter-Matter Studies. A big thank you to all the members of the Centre for Antimatter-Matter Studies for many scientific discussions, a host of different professional development opportunities and the opportunity to work with so many different, motivated people who have a common interest. I would also like to acknowledge the many people that I have collaborated with over the last four years. In no particular order, thank you to Igor Bray, Gustavo García, Friedrich Hanne, Don Madison, Ola Al-Hagan and Christophe Champion.

I would like to acknowledge the assistance of the mechanical and electronic staff at the University of Adelaide. Thanks to Blair Middlemiss, Trevor Waterhouse and Neville Wild, and a very special thank you to Peter Apoeffis who has been absolutely instrumental in the operation of the laboratory. I would personally like to acknowledge the assistance of the staff of the Flinders University electronics workshop, in particular Bill Drury, Wayne Peacock and John Pesor, for being the only people who could fix a series of very troublesome power supplies. Thank you also to Prof. Michael Brunger for helping me to skip the queue to get work done.

I would like to thank the members of the Laser Lab initially for their hospitality, and later for their friendship. I would personally like to thank Sam Wallace, Mable Fong and Alex Gentleman, all of whom are PhD students who didn't necessarily start at the same time as I but who will hopefully all finish at the same time! Thank you to my co-workers over the past

four years: Dr. Mark Stevenson, Dr. Leigh Hargreaves and Dr. Susan Bellm. Thank you for helping me, educating me and treating me as an equal. I wish you all the very best in your future endeavours.

I would like to thank my associate supervisor, Prof. Jesper Munch for providing administrative advice and support to myself and the other members of my research group, at a university to which we were all very new. Thank you to all the staff and students of the School of Chemistry and Physics for your friendship and support.

I would like to give a very special thank you to my principal supervisor, Prof. Birgit Lohmann. She has not only been a brilliant supervisor who has had to deal with challenging workloads and circumstances of her own and also those of her final student, she has also become a trusted friend. Thank you for the opportunity to work with you, which was a result of good luck rather than good planning, and for all the other opportunities that came with it. It has been a pleasure, and I hope you find success and fulfilment in your new role.

Finally, I would like to acknowledge the love and support of my family. To Kate, my wife, and Melanie, my daughter, I dedicate the publication of this thesis to you.

## ***List of Abbreviations***

1CW	One Centre Coulomb Wave
ADC	Analogue-to-Digital Convertor
BBK	Branner, Briggs and Klar
BNC	Bayonet Neill-Concelman
CEM	Channel Electron Multiplier
CF	Conflat
CFD	Constant Fraction Discriminator
CPE	Correlation, Polarization and Exchange
DAQ	Data Acquisition
DDCS	Double Differential Cross Section
DEA	Dissociative Electron Attachment
DNA	Deoxyribose Nucleic Acid
DS3C	Dynamic Screening of Three Two-Body Coulomb Interactions
DSB	Double Strand Breaks
DWBA	Distorted-Wave Born Approximation
EMS	Electron Momentum Spectroscopy
FBA	First Born Approximation
FBA-TCC	First Born Approximation-Two Centre Continuum
FWHM	Full Width at Half Maximum
HOMO	Highest Occupied Molecular Orbital
IAM	Independent Atom Method
ICS	Integral Cross Section
LUMO	Lowest Unoccupied Molecular Orbital
M3DW	Molecular Three-Body Distorted-Wave

MAC	Magnetic Angle Changer
MCP	Microchannel Plate
MTCS	Momentum Transfer Cross Section
NI	National Instruments
NIM	Nuclear Instrumentation Module
OAMO	Orientation Averaged Molecular Orbital
OFHC	Oxygen-Free High Conductivity
PCI	Post Collision Interaction
PSD	Position Sensitive Detector
PTFE	Polytetrafluoroethylene
PWIA	Plane Wave Impulse Approximation
RNA	Ribose Nucleic Acid
SBR	Signal-to-Background Ratio
SCAR	Screening Corrected Additivity Rule
SDCS	Single Differential Cross Section
SS	Stainless Steel
SSB	Single Strand Breaks
TAC	Time-to-Amplitude Convertor
TC	Thermocouple
TDCS	Triple Differential Cross Section
THF	Tetrahydrofuran
TTL	Transistor-Transistor Logic
