Taxonomy

Kingdom	Phylum	Class	Order	Family
Animalia	Chordata	Mammalia	Chiroptera	Vespertilionidae

Taxon Name: *Glischropus javanus* Chasen, 1939

Common Name(s):

- English: Javan Thick-thumbed Bat

Taxonomic Notes:

Glischropus javanus may be conspecific with *G. tylopus* (Corbet and Hill 1992, Menu 1987).

Assessment Information

Red List Category & Criteria: Data Deficient [ver 3.1](#)

Year Published: 2016

Date Assessed: December 24, 2015

Justification:

This species is assessed as Data Deficient as it is known only from two close localities and collected only twice nearly 70 years apart. There has not been much survey work focused on this species.

Previously Published Red List Assessments

2008 – Data Deficient (DD) – <http://dx.doi.org/10.2305/IUCN.UK.2008.RLTS.T9247A12971871.en>

2000 – Endangered (EN)

1996 – Lower Risk/near threatened (LR/nt)

1994 – Insufficiently Known (K)

1990 – Insufficiently Known (K)

1988 – Insufficiently Known (K)

Geographic Range

Range Description:

This species, described in 1939, is known only from two neighbouring localities on Mt Pangrango in western Java, Indonesia.

Country Occurrence:

Native: Indonesia

Distribution Map

Glischropus javanus

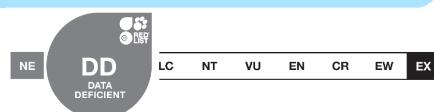

Glischropus javanus

Range

Extant (resident)

Compiled by:

IUCN (International Union for Conservation of Nature)

The boundaries and names shown and the designations used on this map do not imply any official endorsement, acceptance or opinion by IUCN.

Population

The abundance and population size of this species are not known. It has been collected only twice, seventy years apart.

Current Population Trend: Unknown

Habitat and Ecology (see Appendix for additional information)

There is no information specific to this species. Members of the genus, typically recorded in or around bamboo grooves, and often cope with cultivated habitats. A specimen was collected in bamboo by A. Suyanto (U. Sinaga pers. comm.). It is not usually dependent on water and it probably lives in small colonies. Other specimens determined as belonging to this species in the collections of RMNH and MZB proved to be represent different species (Csorba 2011).

Systems: Terrestrial

Threats

The threats to this species are not known, but habitat loss in the lowland regions could be a threat, assuming its reliant on primary habitat.

Conservation Actions (see Appendix for additional information)

This species has been collected by A. Suyato from Gunung Halimun National Park (U. Sinaga pers. comm.). Further research to determine the species' range, population status, habitats and threats is needed.

Appendix

Habitats

(<http://www.iucnredlist.org/technical-documents/classification-schemes>)

Habitat	Season	Suitability	Major Importance?
1. Forest -> 1.6. Forest - Subtropical/Tropical Moist Lowland	-	Suitable	-

Conservation Actions in Place

(<http://www.iucnredlist.org/technical-documents/classification-schemes>)

Conservation Actions in Place
In-Place Land/Water Protection and Management
Conservation sites identified: Yes, over entire range
Occur in at least one PA: Yes

Research Needed

(<http://www.iucnredlist.org/technical-documents/classification-schemes>)

Research Needed
1. Research -> 1.2. Population size, distribution & trends
1. Research -> 1.3. Life history & ecology
1. Research -> 1.5. Threats

Additional Data Fields

Distribution
Estimated extent of occurrence (EOO) (km ²): 661
Population
Population severely fragmented: No
Habitats and Ecology
Generation Length (years): 5.6
