## Corrigendum

# Phospho-epitope binding by the BRCT domains of hPTIP controls multiple aspects of the cellular response to DNA damage

Ivan M. Munoz, Paul A. Jowsey, Rachel Toth and John Rouse\*

MRC Protein Phosphorylation Unit, Sir James Black Centre, University of Dundee, Dundee DD1 5EH, Scotland, UK

Nucleic Acids Research (2007) 35(16) 5312–5322, <https://doi.org/10.1093/nar/gkm493>

The authors wish to make the following correction to their article:

Duplicated loading control lanes were noticed in Figure 1C. A new figure to correct the mistake in Figure 1C is presented here to maintain the integrity of the research record. This correction does not alter the conclusions of the article.

**Figure 1C.** HEK293 cells were co-transfected with FLAG-hPTIP and full-length HA-53BP1 bearing the indicated mutations. Cells were exposed to IR (0 Gy or 20 Gy) and after cell lysis anti-FLAG immunoprecipitates were subjected to SDS-PAGE and western blotting with the indicated antibodies. The lowest panels show HA-53BP1 and FLAG-hPTIP levels in cell extracts.
