Introduction

The CGIAR Research Program on Climate Change, Agriculture and Food Security (CCAFS) seeks to promote a food-secure world through the provision of science-based efforts that support sustainable agriculture and enhance livelihoods while adapting to climate change and conserving natural resources and environmental services.

Climate change is an unprecedented threat to the food security of hundreds of millions of people who depend on small-scale agriculture for their livelihoods. Climate change affects agriculture and food security, and likewise, agriculture and natural resource management affect the climate system.

CCAFS has initially focused on three regions; East Africa (EA), West Africa (WA) and South Asia (SA) to carry out its research. The 15 CCAFS sites in these areas represent areas that are becoming both drier and wetter, and are focal locations that will generate results that can be applied and adapted to other regions worldwide. In this year, 2013, CCAFS is expanding its portfolio to additional sites in Latin America and South-East Asia.

These sites serve as the initial focus of CCAFS partnership-building and long-term research activities falling within the following CCAFS Research Themes; Adaptation to Progressive Climate Change, Adaptation through Managing Climate Risk, Pro-Poor Climate Change Mitigation and Integration for Decision Making. At all 15 CCAFS sites, baseline surveys have been conducted, including three levels of data collection and analysis at household, village and organizational levels (see: <http://ccafs.cgiar.org/resources/baseline-surveys>).

More information on CCAFS work in all the three regions can be accessed at www.ccafs.cgiar.org

To better understand the CCAFS sites' characteristics, a list of geospatial indicators for climate variability, bio-physical characteristics and socio-economic variables have been mapped into site atlases.

This Atlas was developed for the CCAFS site at Yatenga / Tougou in Burkina Faso, in West Africa Region.

CCAFS Sites: West Africa

- Burkina Faso: Yatenga (BF01)
- Ghana: Lawra-Jirapa (GH01)
- Mali: Segou (MA01)
- Niger: Kollo (NI01)
- Senegal: Kaffrine (SE01)

Scale 1:215,000

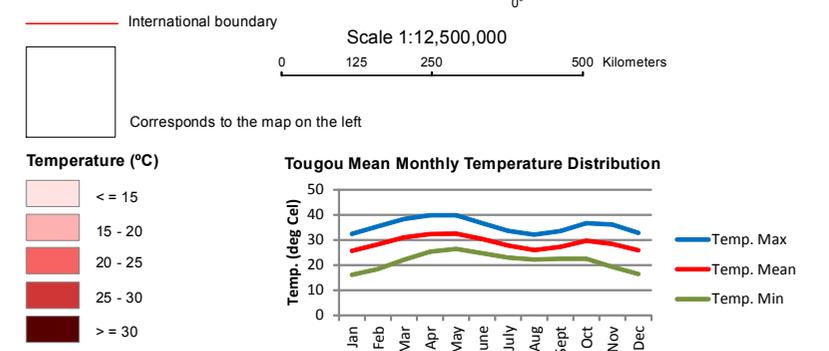

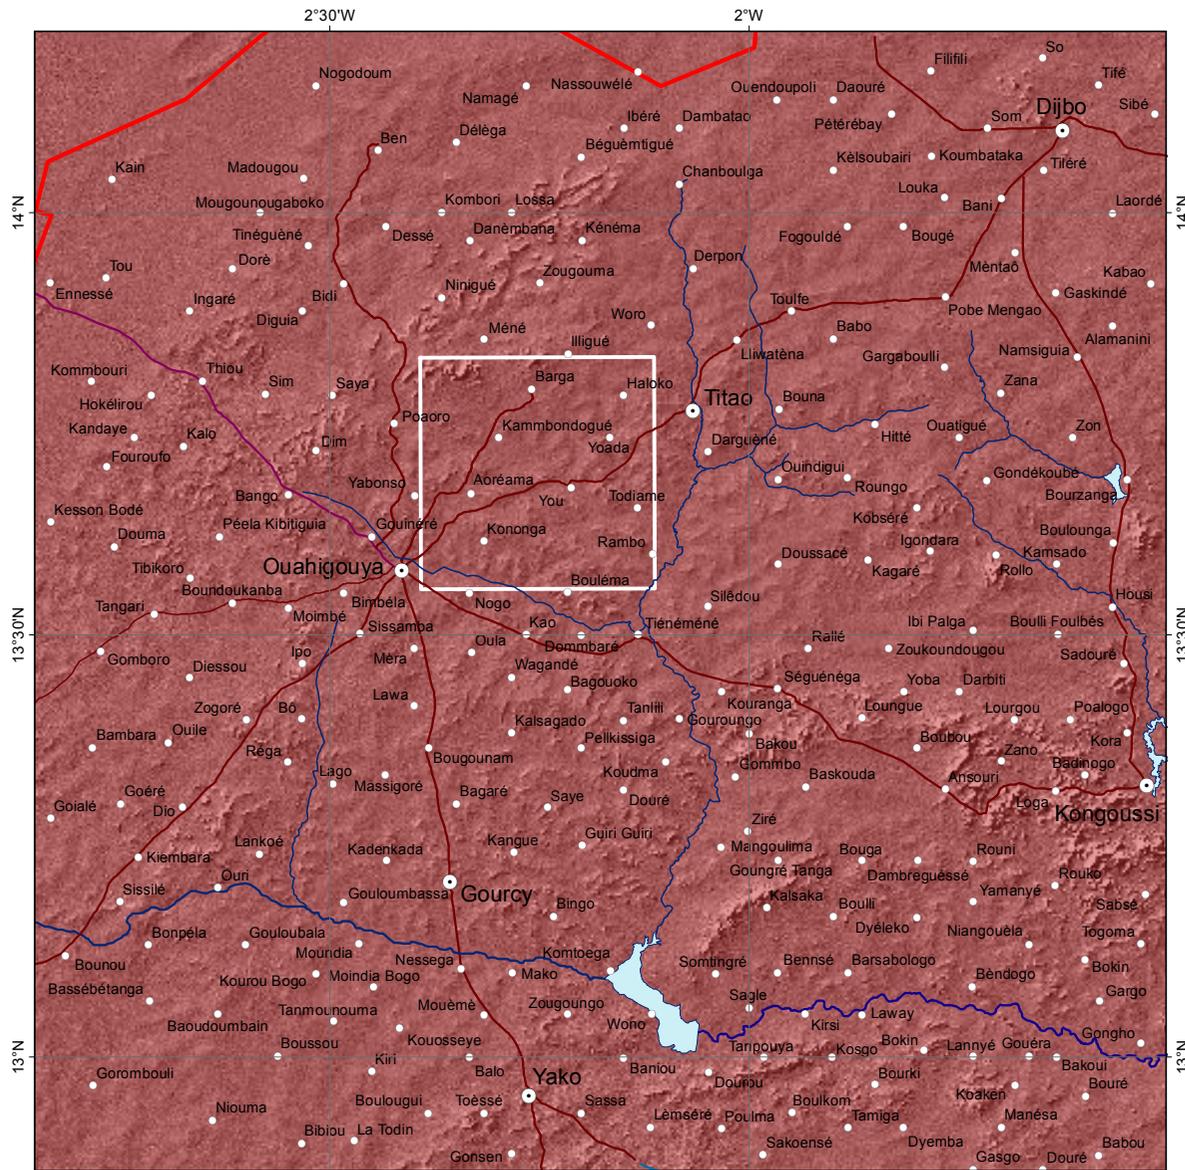

Annual Rainfall

Annual Rainfall data of current interpolations of observed data, representative of 1950 - 2000

Citation: Hijmans et al (2005)

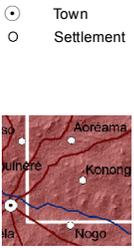

Annual Temperature

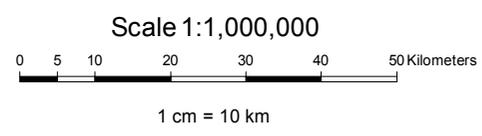

Citation: Jones et al (2002)

Citation: Hijmans et al (2005)

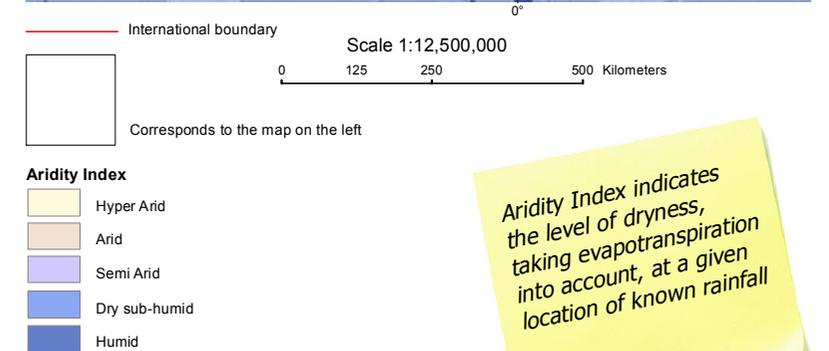

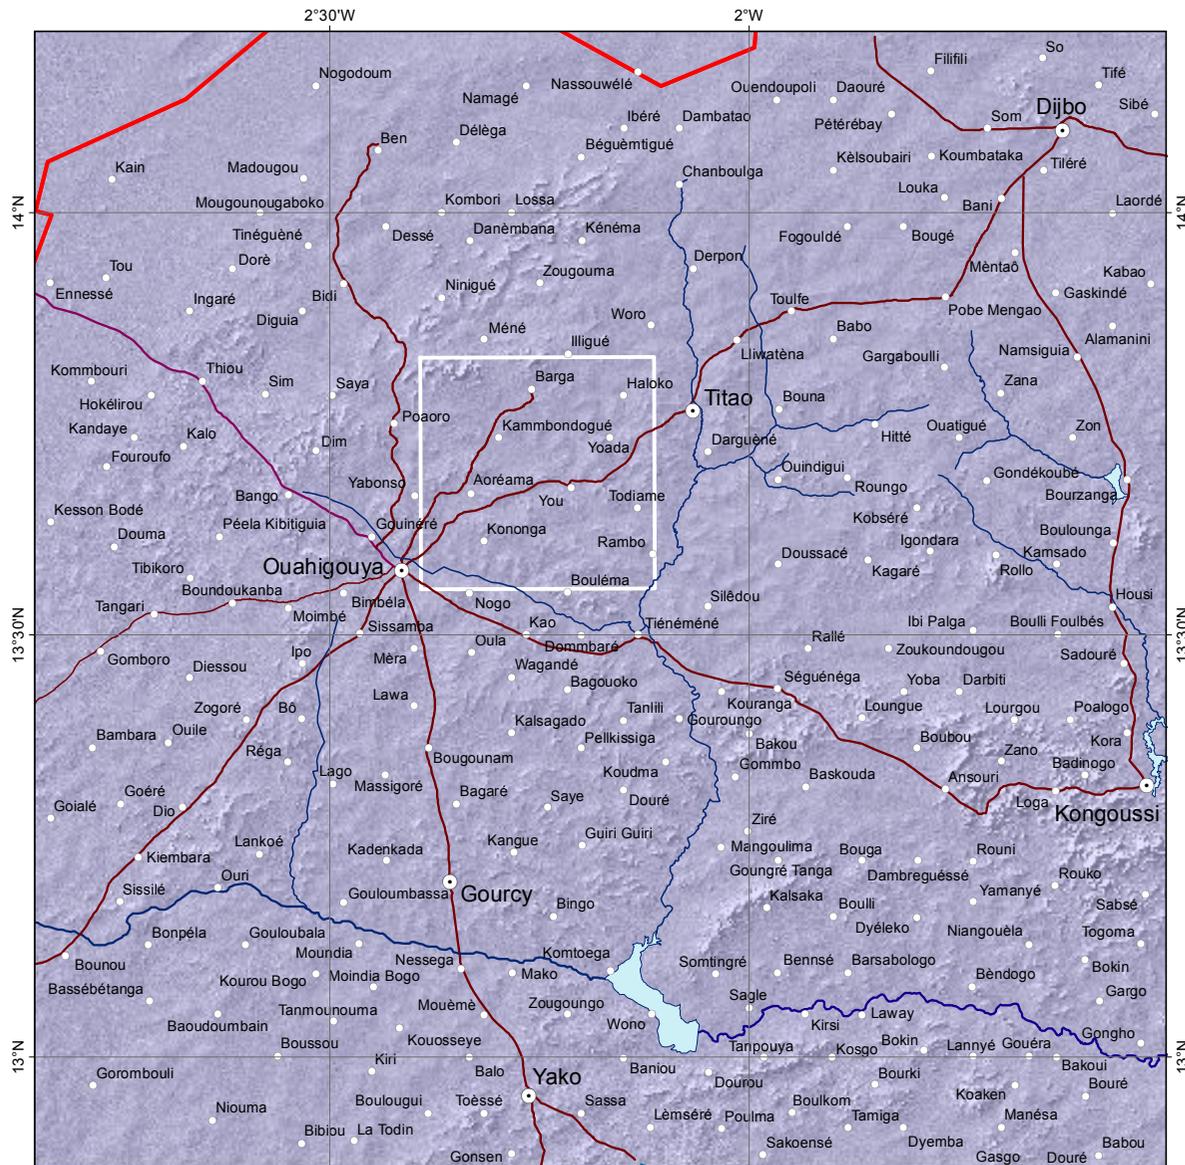

Annual Temperature represents annual temperature data of current interpolations of observed data, averaged for 1950 - 2000

- Town
- Settlement
- International Boundary
- Road
- River
- Open Water

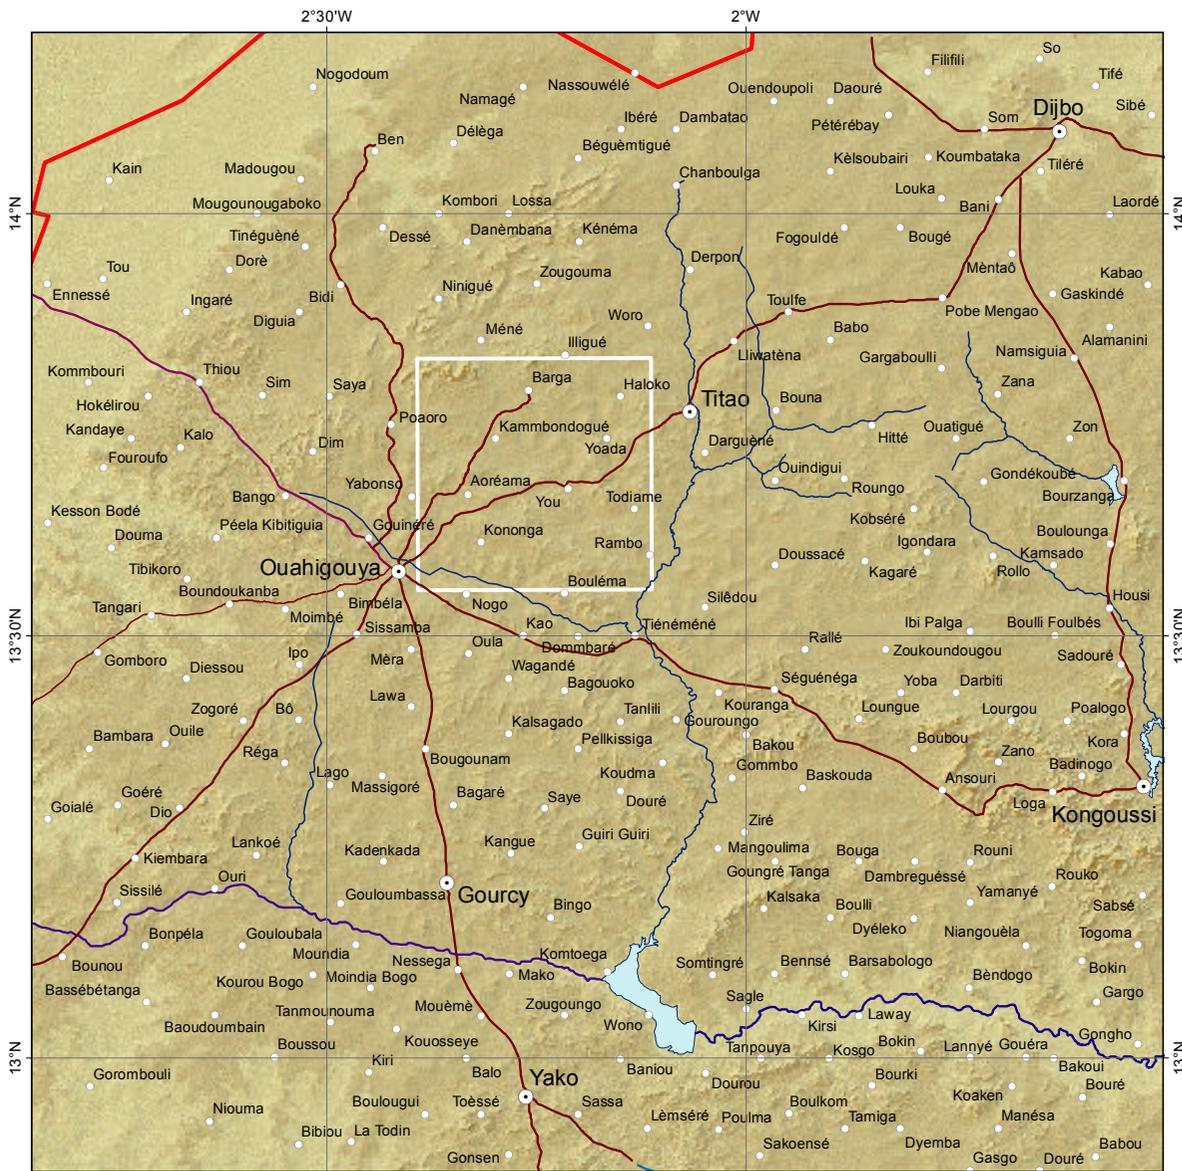

Aridity Index

Aridity Index indicates the level of dryness, taking evapotranspiration into account, at a given location of known rainfall

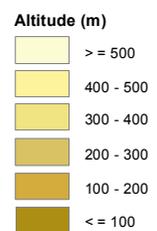

Citation: Hijmans et al (2005)

Altitude

Scale 1:12,500,000
0 125 250 500 Kilometers

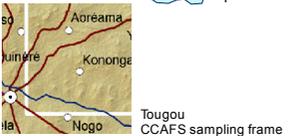

Corresponds to the map on the left

Altitude indicates the height above sea level in meters

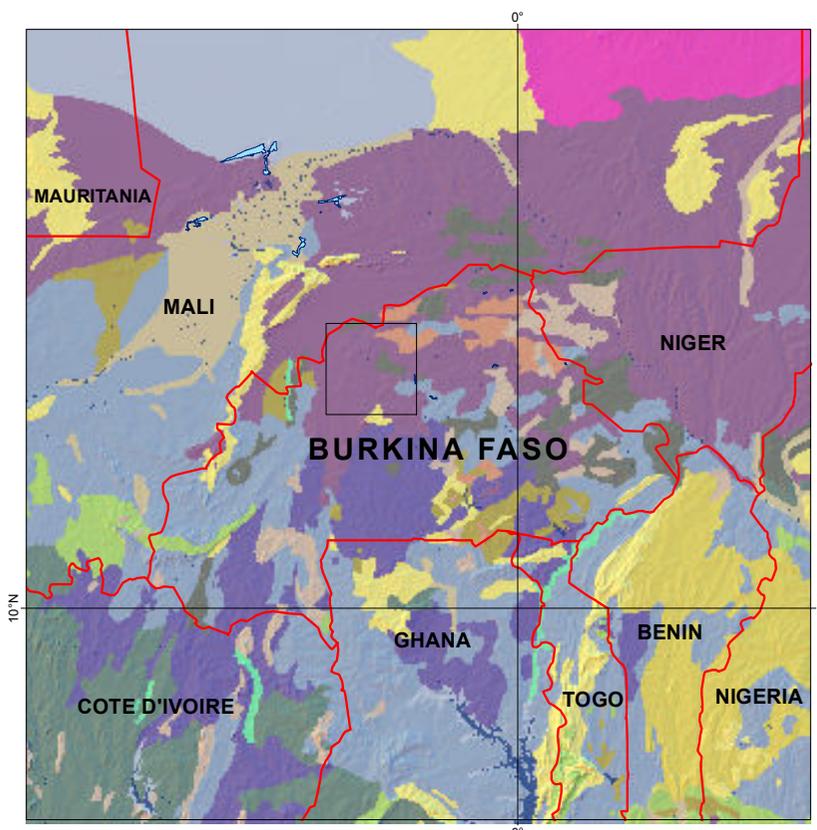

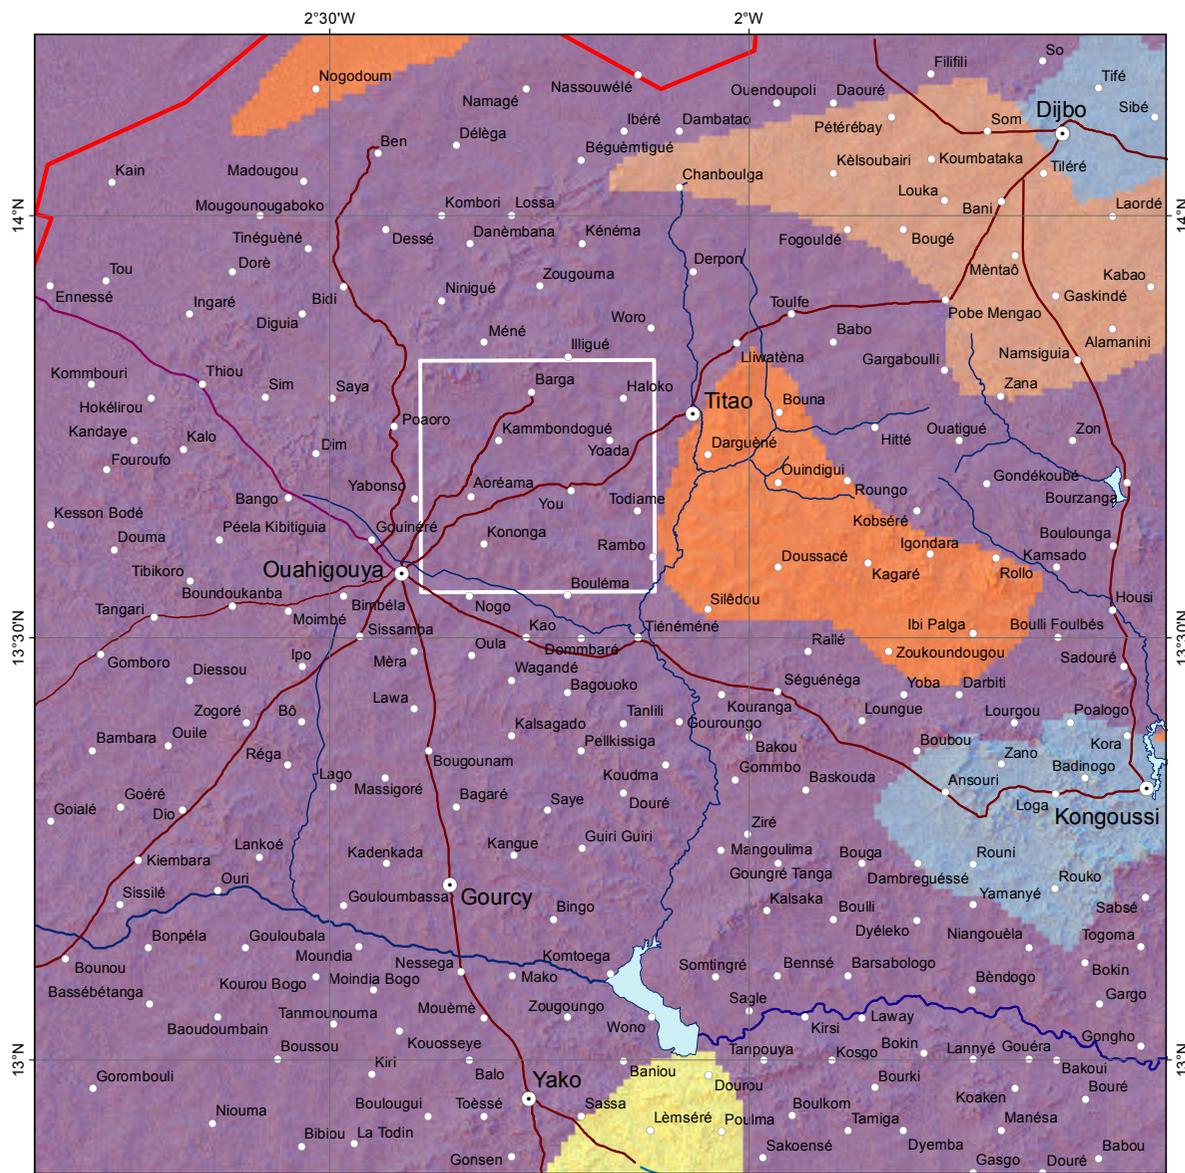

Scale 1:1,000,000
0 5 10 20 30 40 50 Kilometers
1 cm = 10 km

- Town
- Settlement
- International Boundary
- Road
- River
- Open Water

Citation: Jarvis et al (2008)

Soil Type

— International boundary
 Scale 1:12,500,000
 0 125 250 500 Kilometers

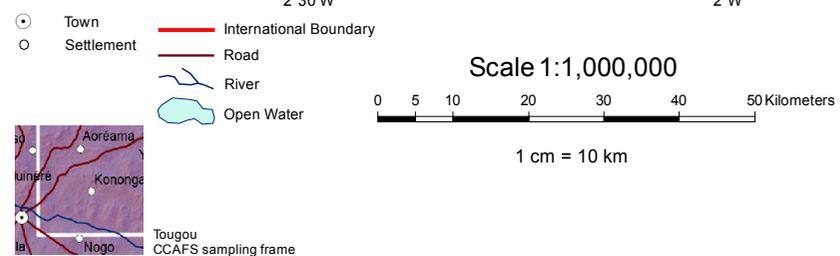

□ Corresponds to the map on the left

Soil Type *

- Arenosols
- Leptosols
- Lixisols
- Planosols
- Regosols

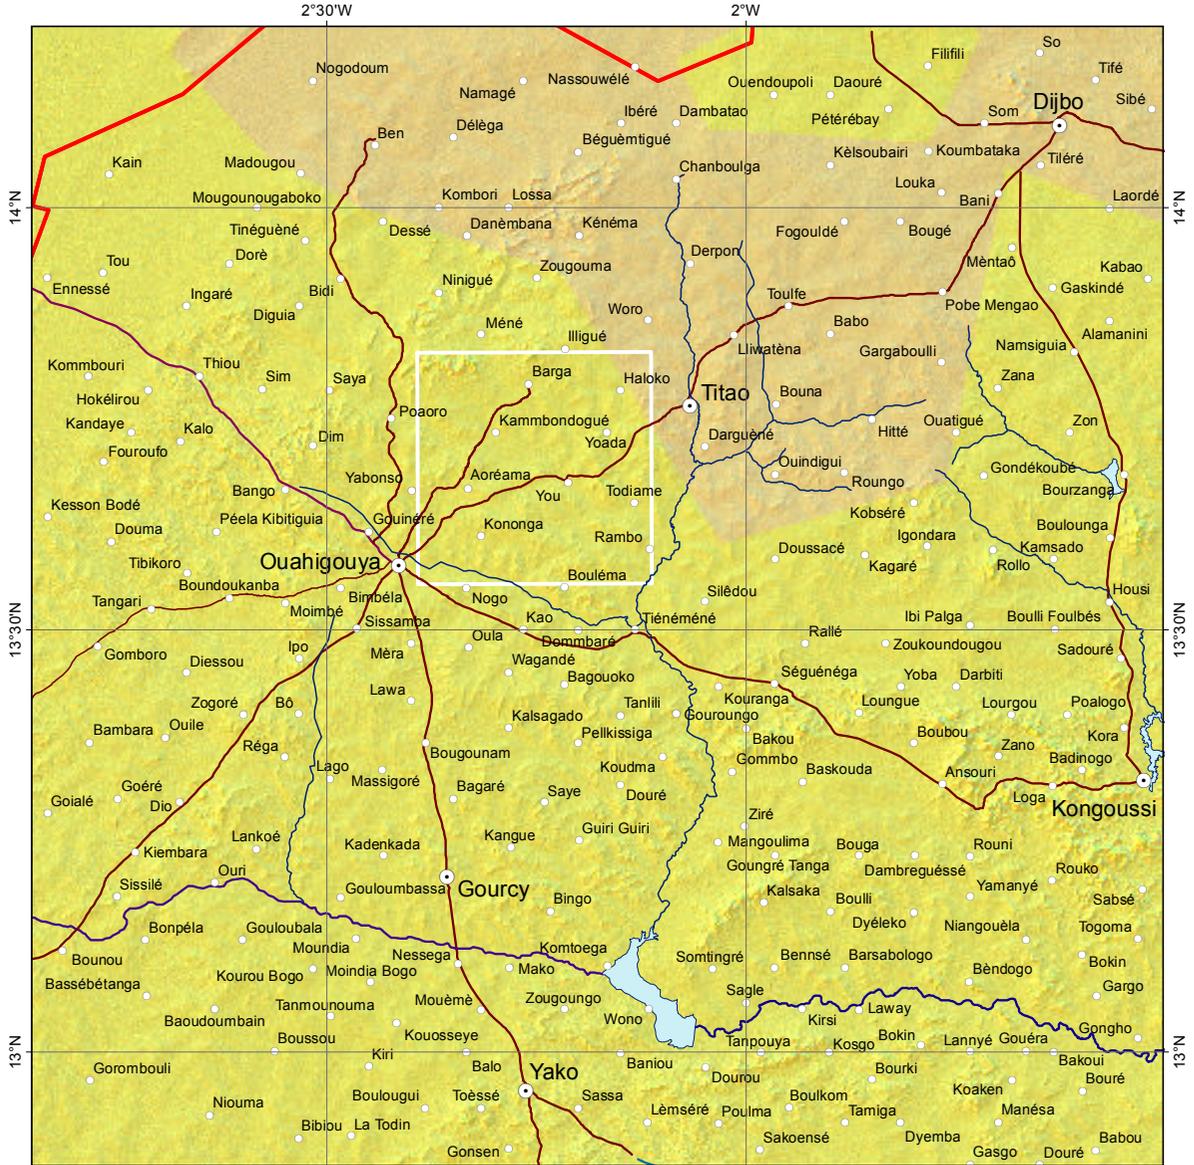

* Legend corresponds to left map

Soil Type refers to the soil group as per the FAO classification. Soil groups are defined by their parent material and morphogenetic characteristics in terms of texture (sand, silt and clay content), as well as organic matter content.

Citation: FAO et al (2009)

Agro-Ecological Zones

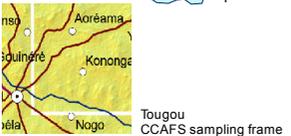

International boundary
 Scale 1:12,500,000
 0 125 250 500 Kilometers

Corresponds to the map on the left

Agro-Ecological Zones *
 Arid/Sahel Savanna
 Semi-arid/Sudan Savanna
 * Legend corresponds to left map

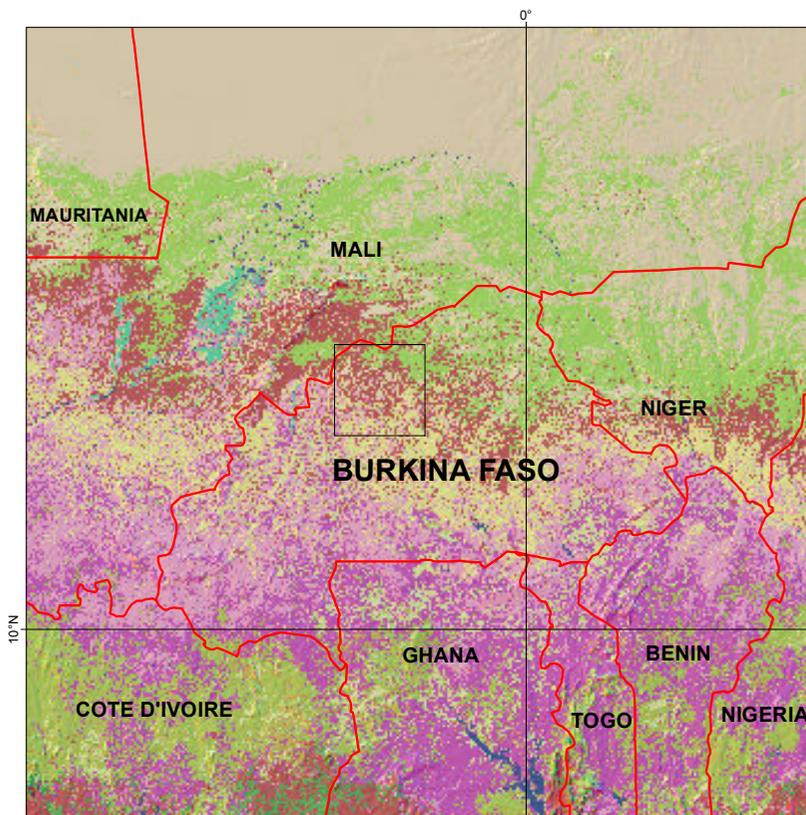

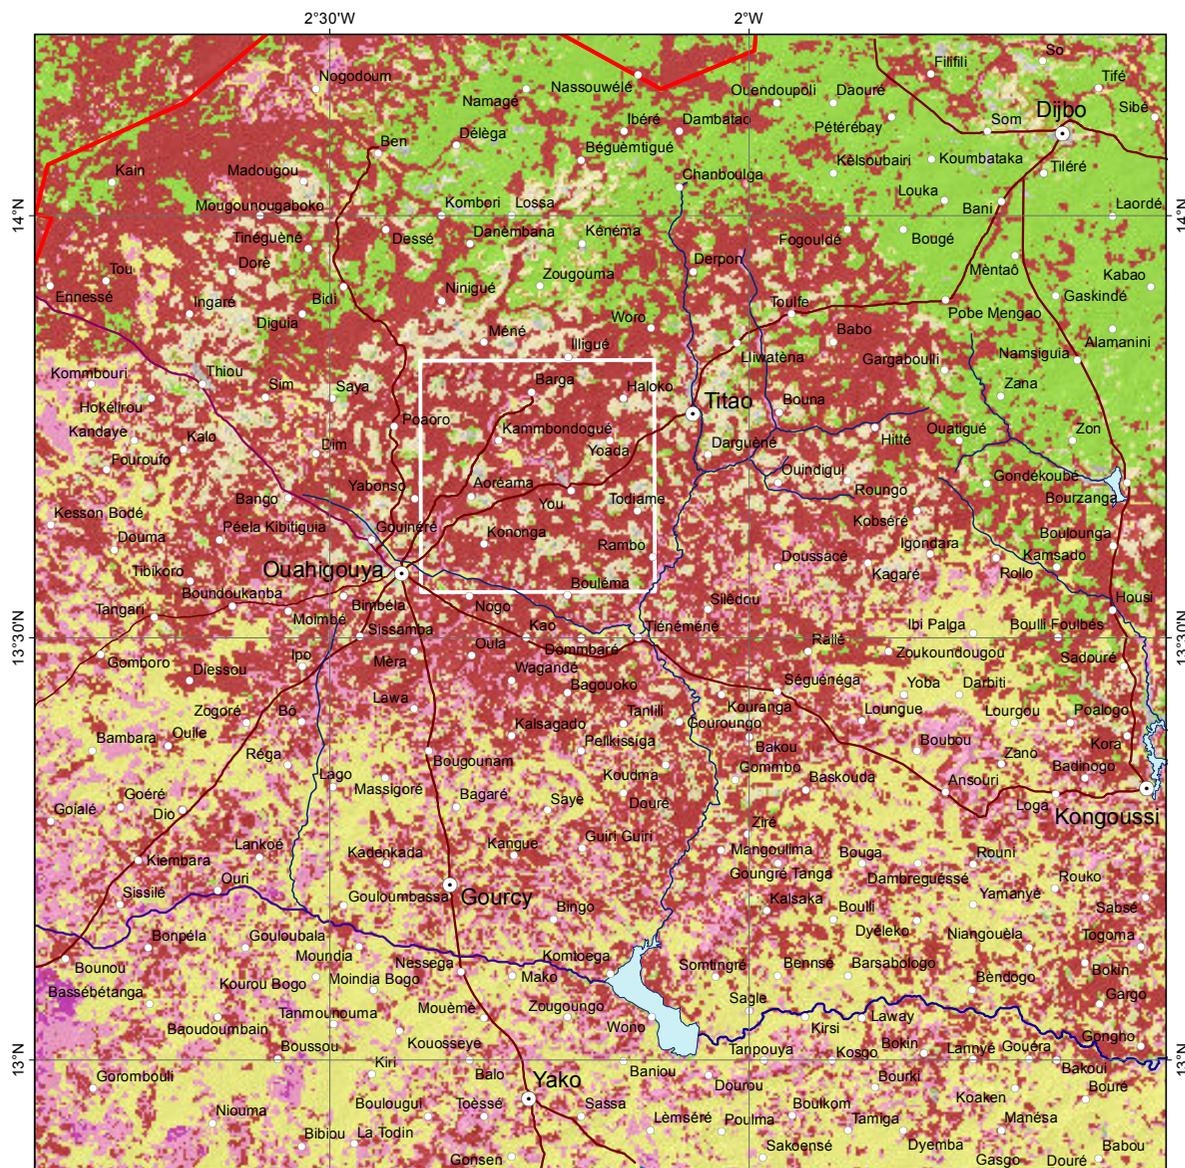

Agro-Ecological Zones indicate the division of land areas that have similar characteristics related to land suitability, potential agricultural production and environmental impact.

○ Town
 ○ Settlement

 — Road
 — River
 — Open Water
 Scale 1:1,000,000
 0 5 10 20 30 40 50 Kilometers
 1 cm = 10 km

Citation: FAO (2008)

Landcover

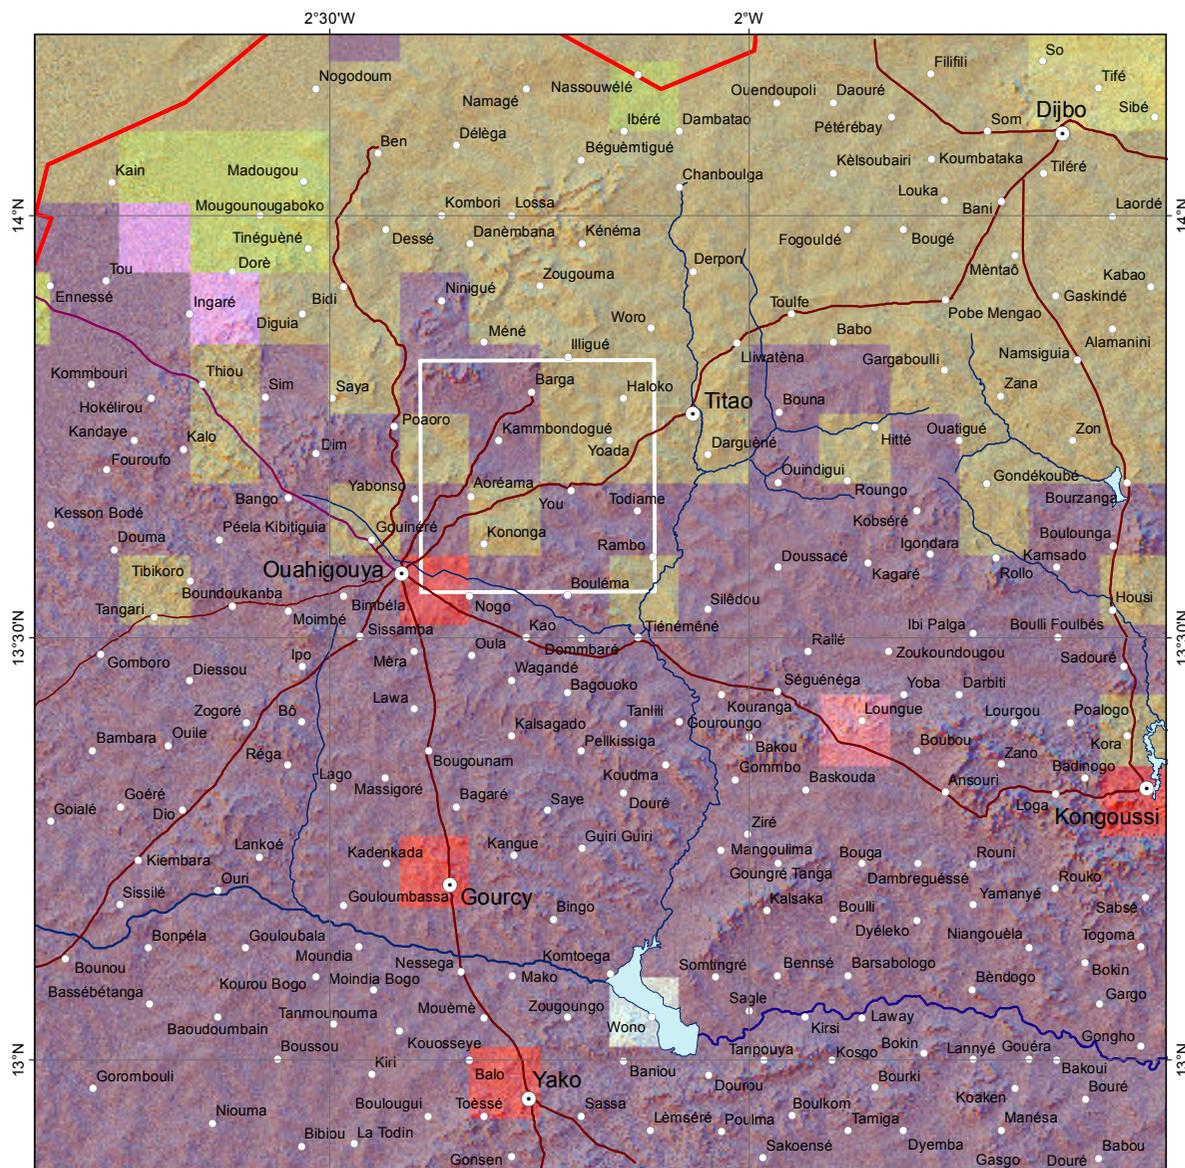

— International boundary
 Scale 1:12,500,000
 0 125 250 500 Kilometers
 [White box] Corresponds to the map on the left

- Landcover ***
- Rainfed croplands
 - Mosaic Croplands/Vegetation
 - Mosaic Vegetation/Croplands
 - Mosaic Grassland/Forest-Shrubland
 - Mosaic Forest-Shrubland/Grassland
 - Closed to open shrubland
 - Closed to open grassland
 - Sparse vegetation

* Legend corresponds to left map

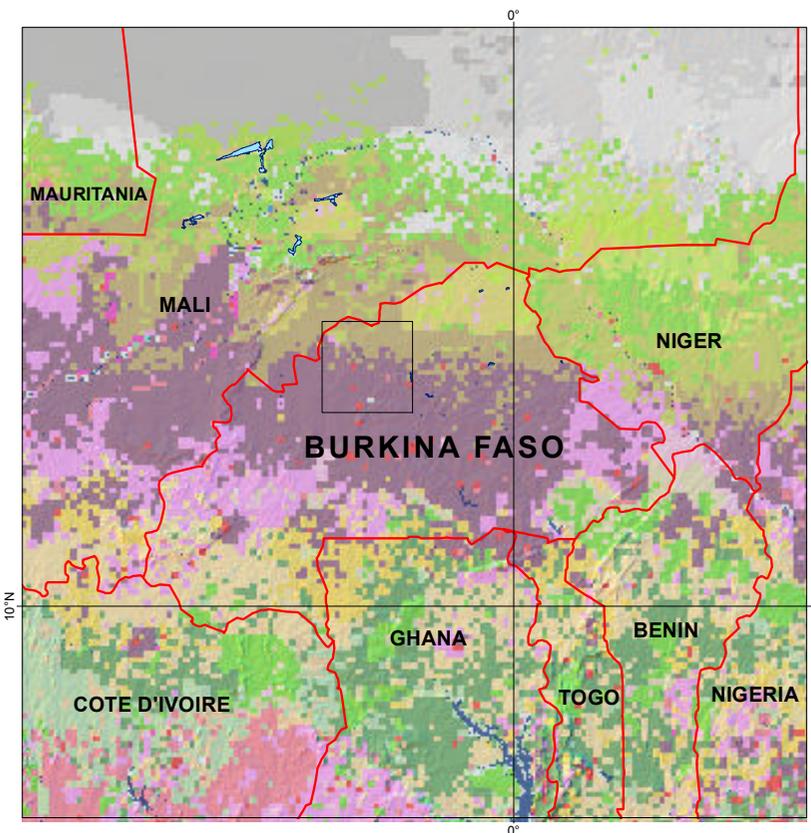

Landcover shows the observed (bio)physical cover of the earth's surface, i.e. dominant vegetation, land use and man-made features.

Scale 1:1,000,000

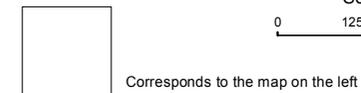

1 cm = 10 km

International boundary

Scale 1:12,500,000

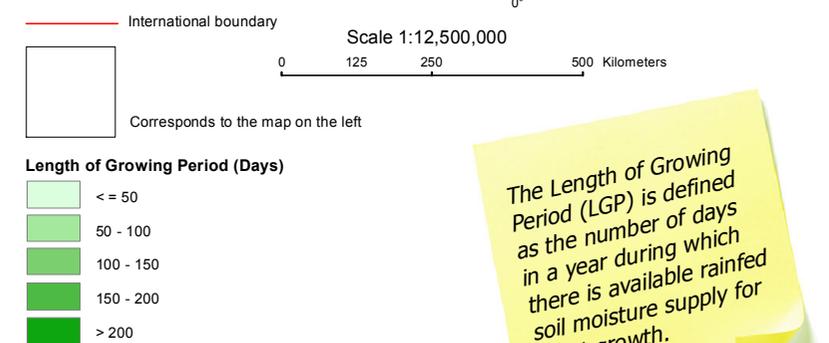

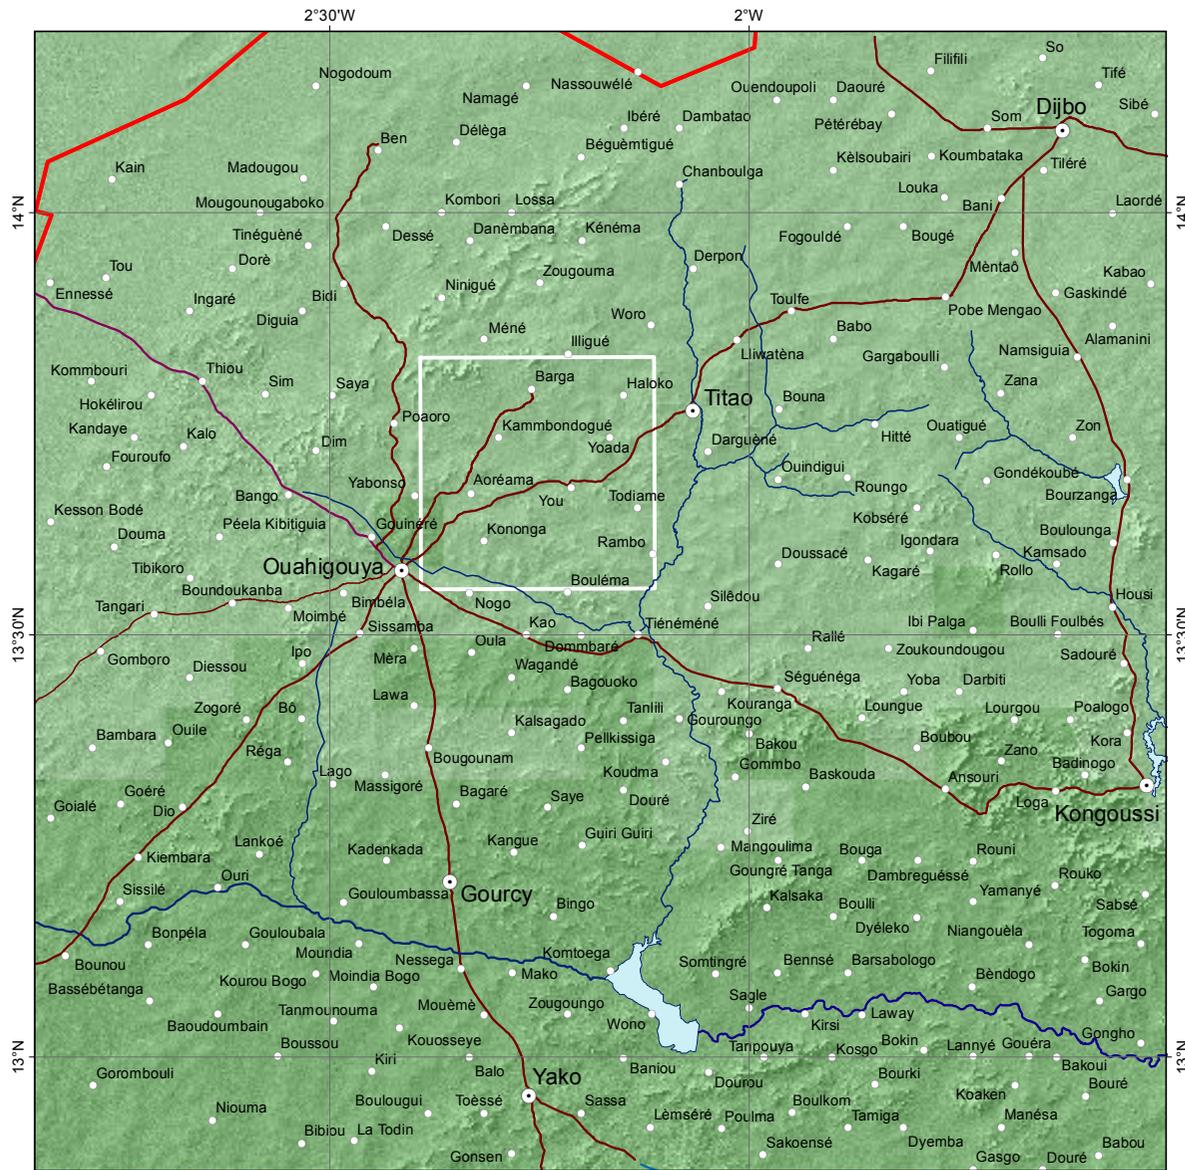

Landuse *

- Grasslands protected
- Grasslands moderate livestock density
- Grasslands high livestock density
- Rainfed crops (Subsistence/Commercial)
- Crops and moderate intensive livestock density
- Crops and high livestock density
- Urban area
- Open water inland Fisheries

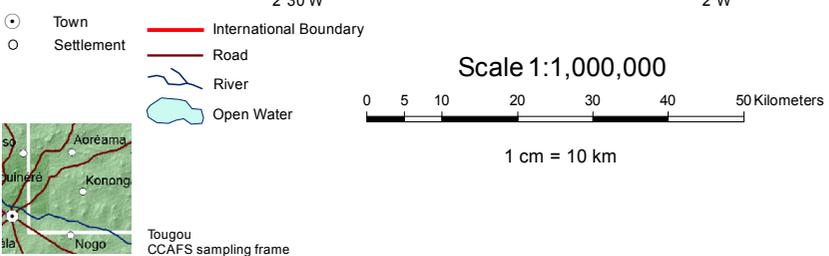

* Legend corresponds to left map

Landuse is a description of how people utilize the land. It involves socio-economic activity, i.e. the management and modification of the natural environment, such as agricultural fields and settlements. At any place, there may be multiple land uses, the dominant one is presented here.

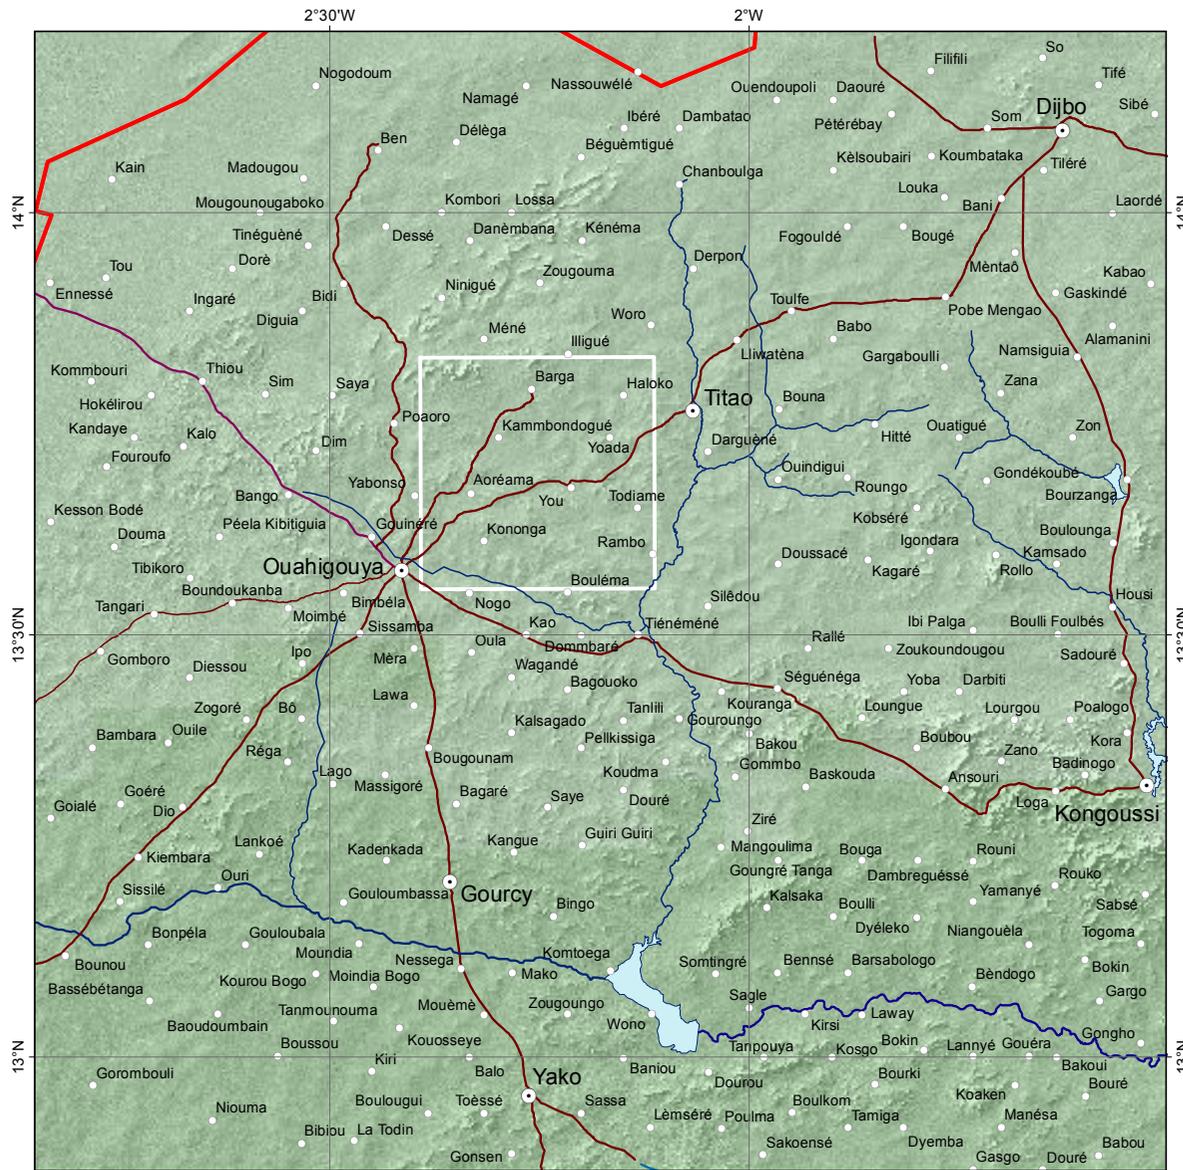

Length of Growing Period 2000

The Length of Growing Period (LGP) is defined as the number of days in a year during which there is available rainfall soil moisture supply for plant growth.

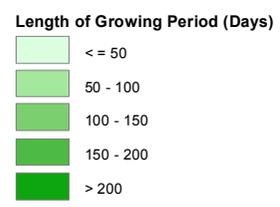

Length of Growing Period 2030

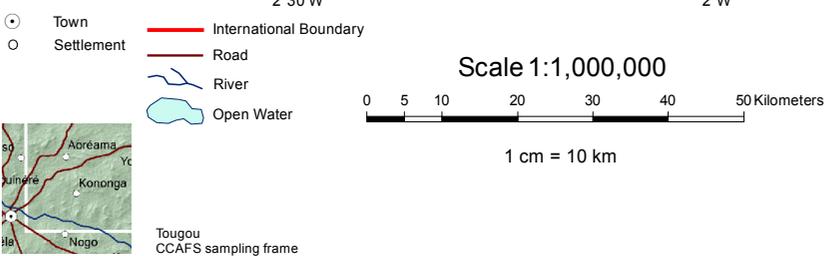

International boundary
 Scale 1:12,500,000
 0 125 250 500 Kilometers

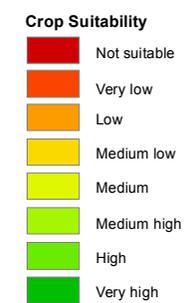

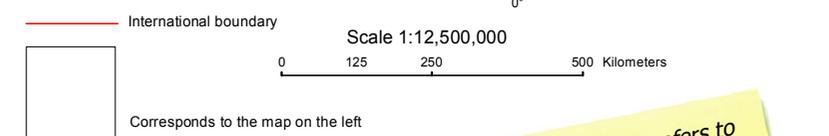

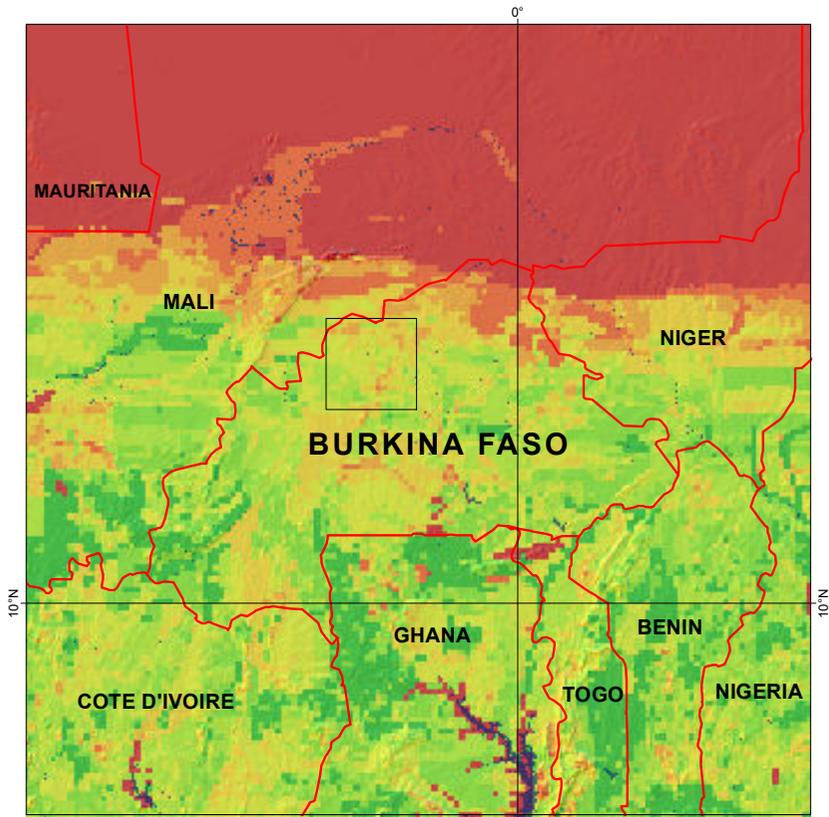

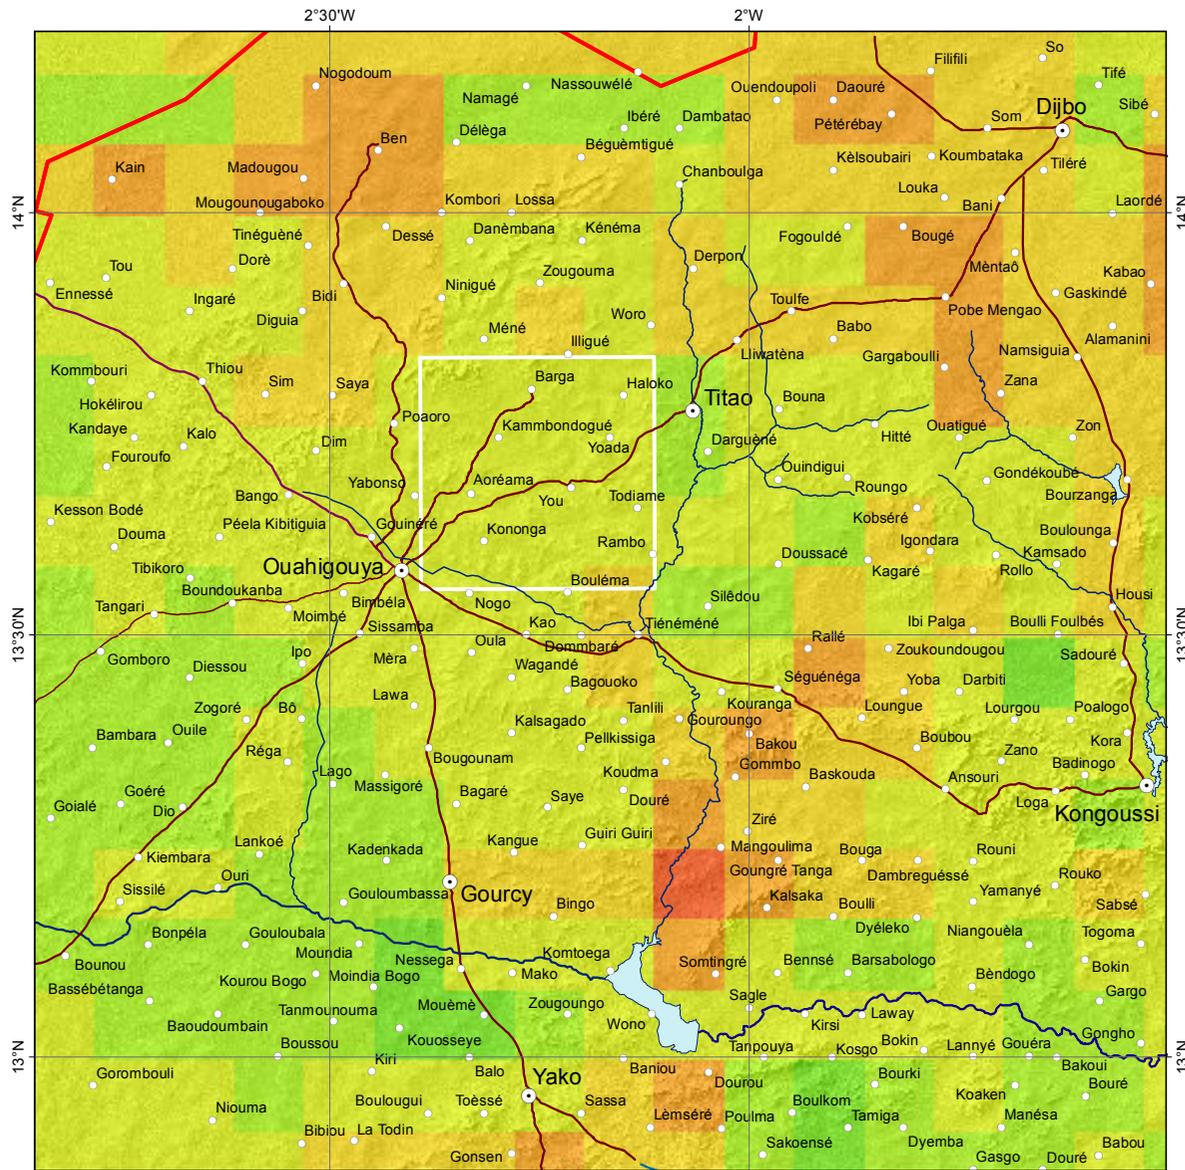

Corresponds to the map on the left

The Length of Growing Period (LGP) is defined as the number of days in a year during which there is available rainfed soil moisture supply for plant growth; here modeled for 2030

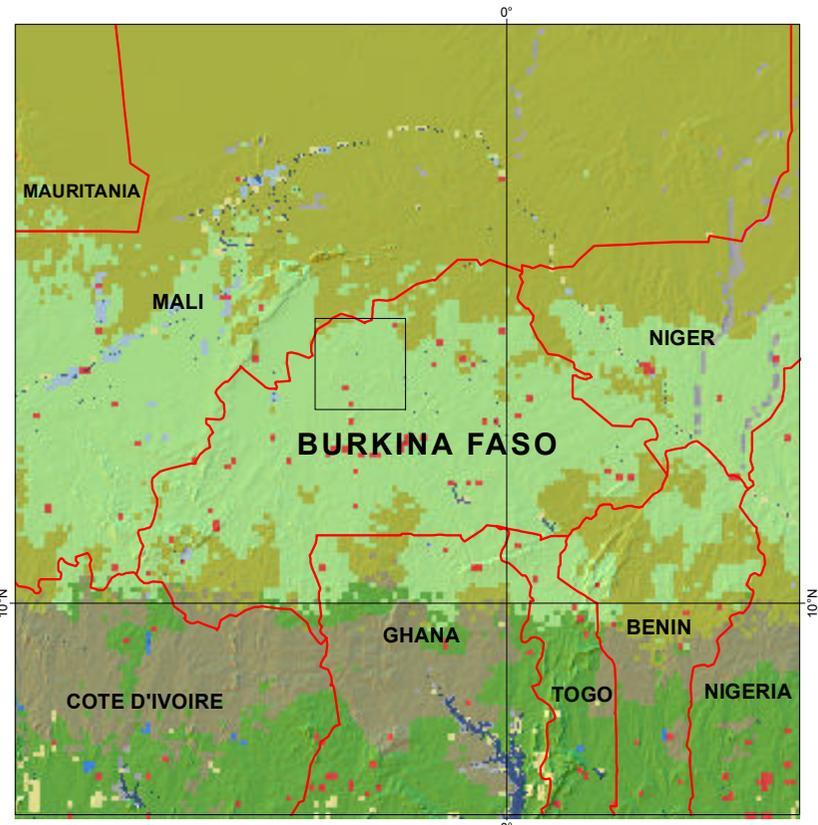

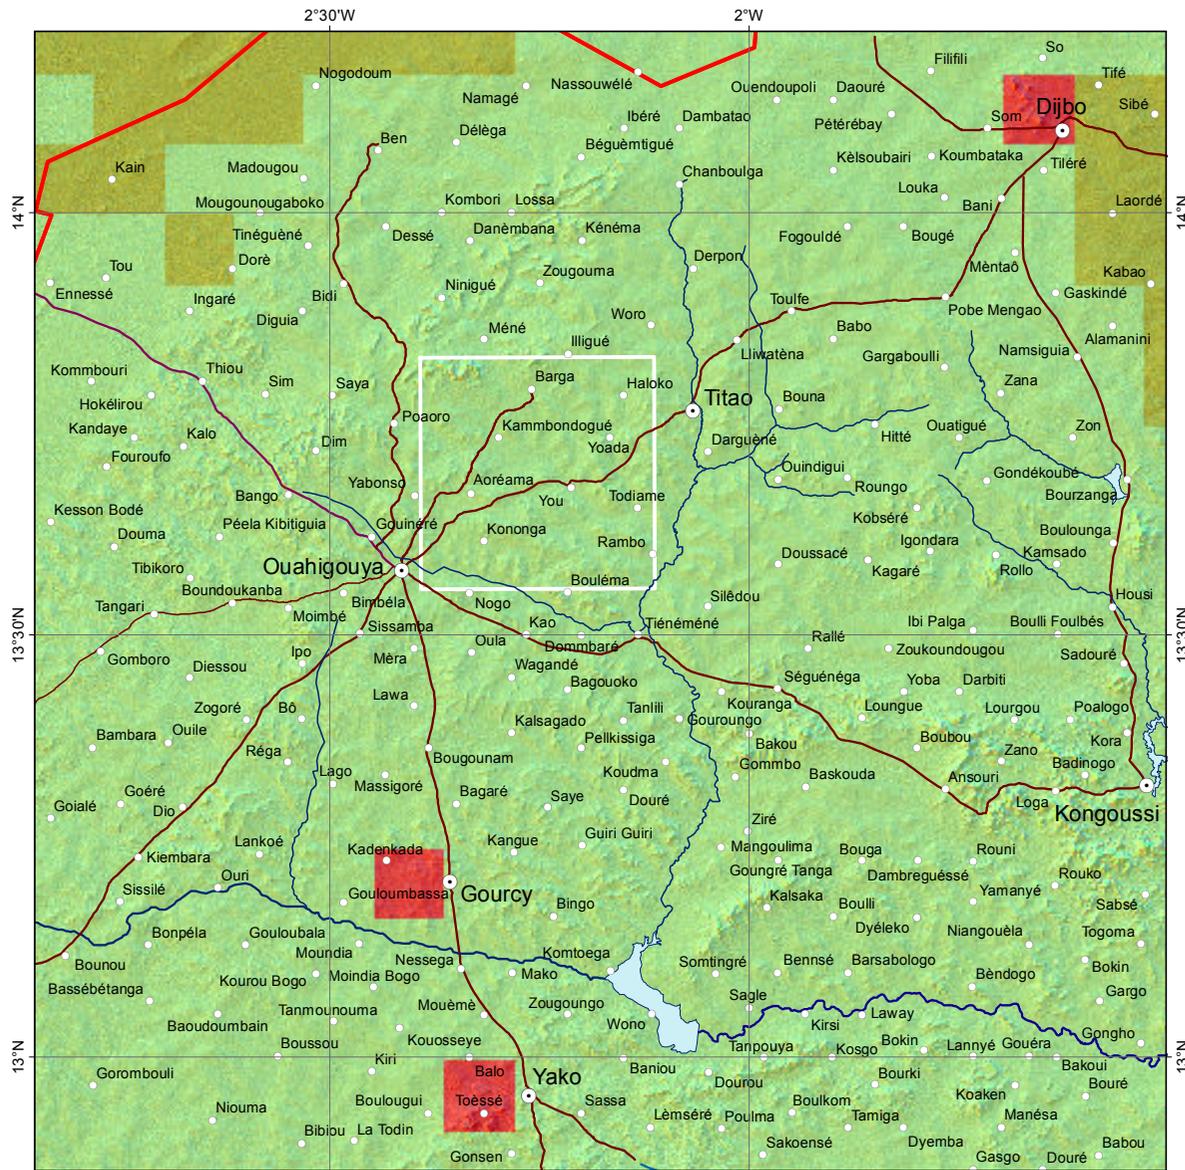

Crop Suitability

Crop Suitability refers to the land resource assessment that considers agricultural land use options with relevant agro-ecological condition to estimate expected cropping activities.

Citation: FAO and IIASA (2007)

Livestock Production Systems

International boundary
 Scale 1:12,500,000
 0 125 250 500 Kilometers

Corresponds to the map on the left

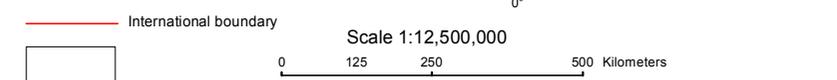

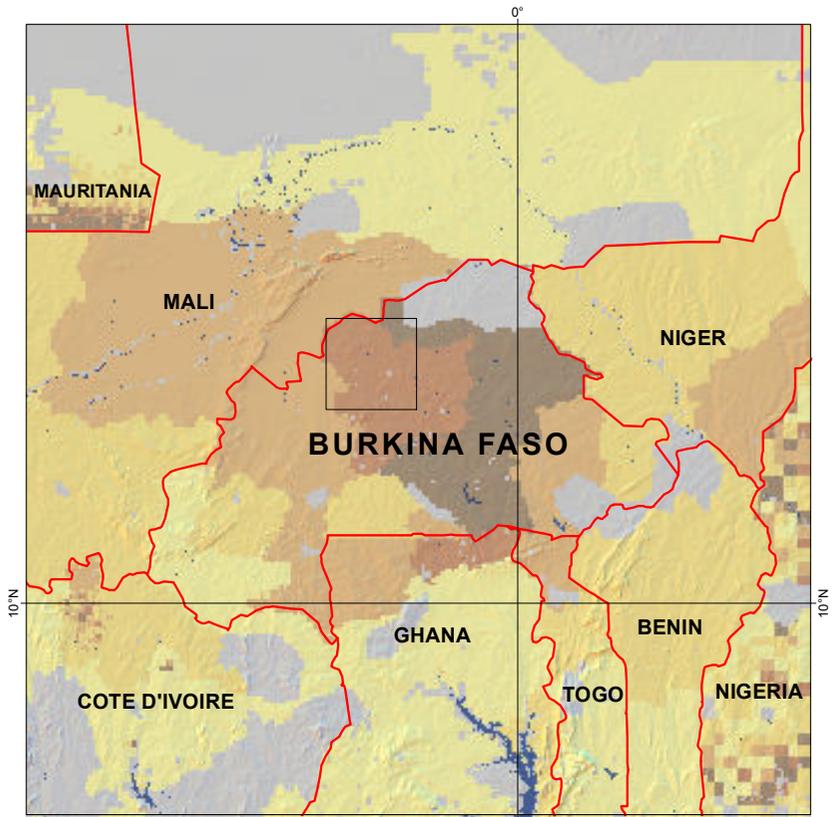

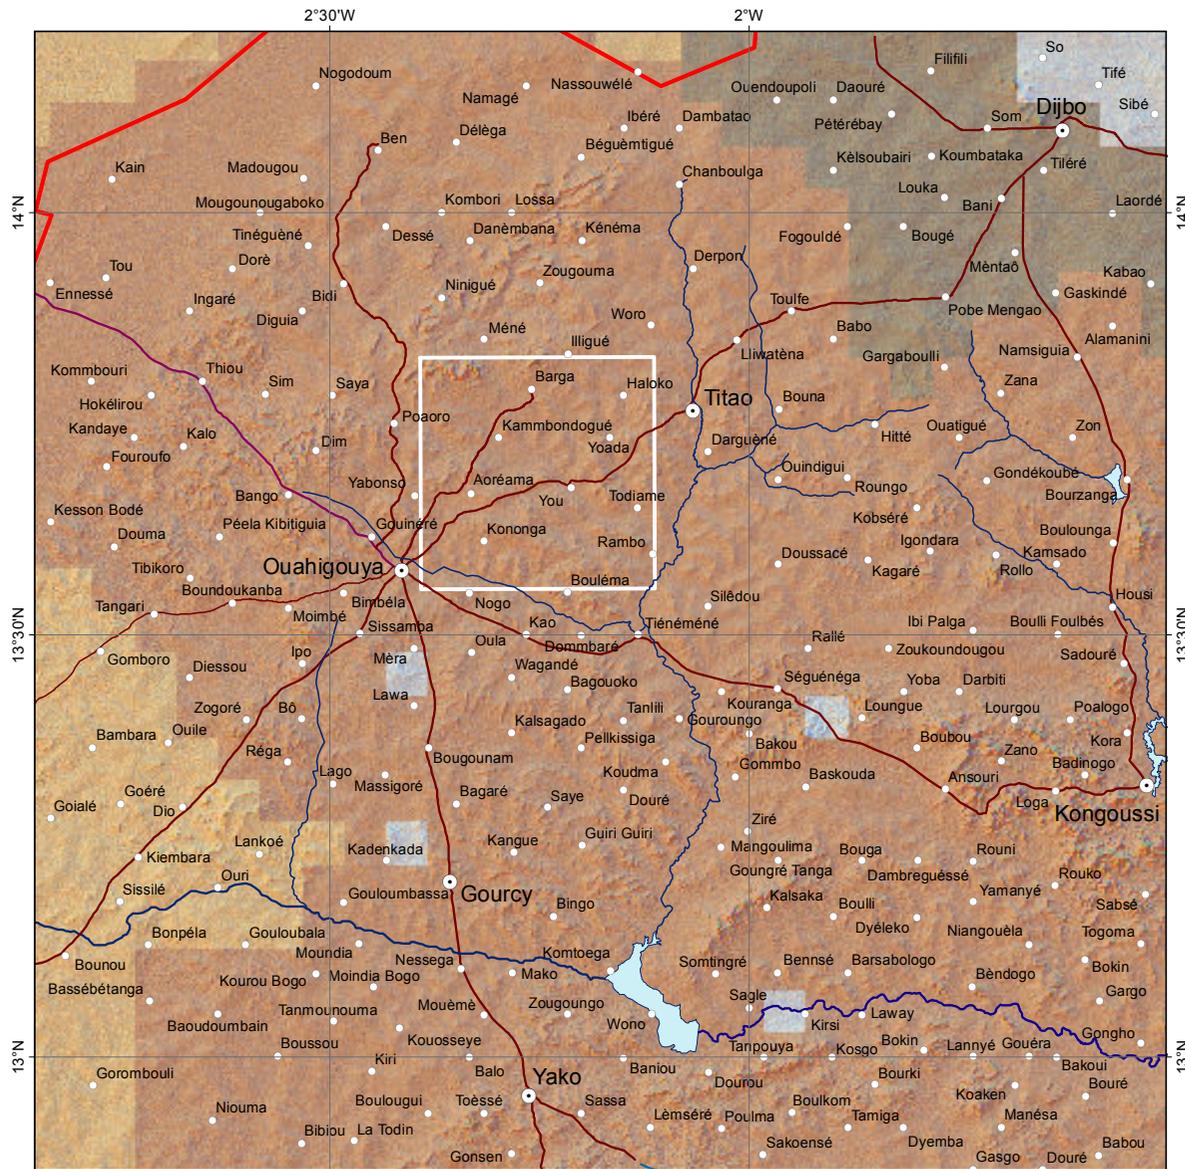

- | | |
|---|---|
| Mixed Rainfed | Livestock only |
| Arid / Semi-arid | Arid /semi-arid |
| Humid / sub-humid | Temperate / highland |
| Temperate / highland | Closed to open shrubland |
| Mixed Irrigated | Urban area |
| Arid / semi-arid | Other |
| Humid / sub-humid | |
| Temperate / highland | |

Livestock Production Systems as part of agricultural systems take agro-climatic conditions into account and are classified in terms of feed and livestock resources; livestock commodities produced; production technology; product use and livestock functions; area covered; geographic locations; and human populations supported.

Citation: FAO (2007)

Livestock Density

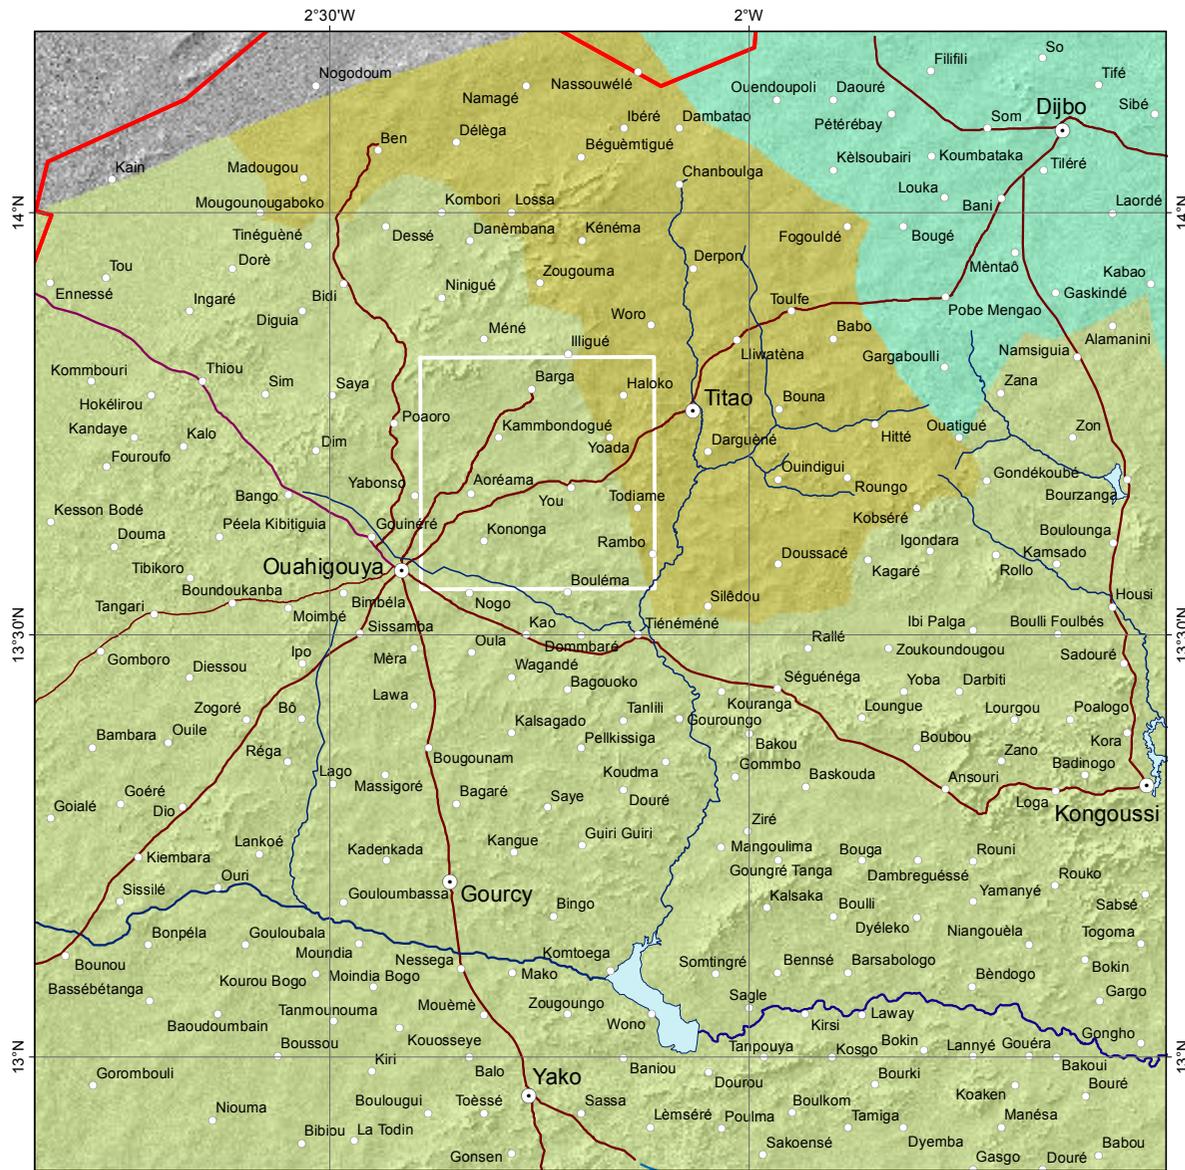

Corresponds to the map on the left

Livestock Density is measured in numbers of livestock, including cattle, goats and sheep, per km²

Citation: Wint et al (2007)

Livelihood Zones

International boundary

Scale 1:12,500,000

0 125 250 500 Kilometers

Corresponds to the map on the left

Livelihood Zones *

- Central plateau cereals and market gardening
- North and east livestock and cereals
- North transhuman pastoralism and millet

* Legend corresponds to left map

Livelihoods are complex and shaped by a variety of factors. These livelihood zone maps delineate geographic areas within which people broadly share the same livelihood patterns including access to food, income, and markets.

Human Population Density

International boundary
 Scale 1:12,500,000
 0 125 250 500 Kilometers

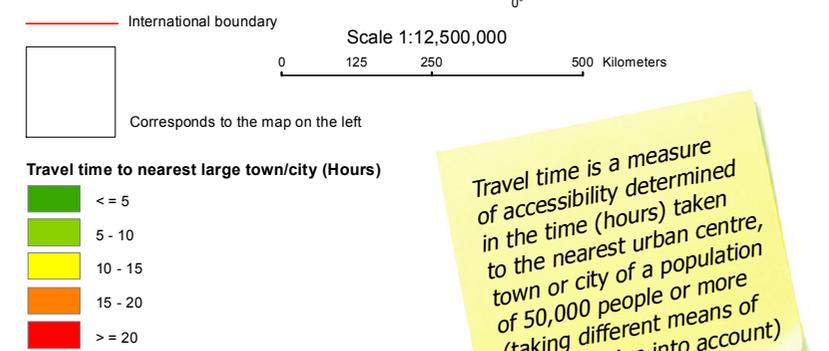

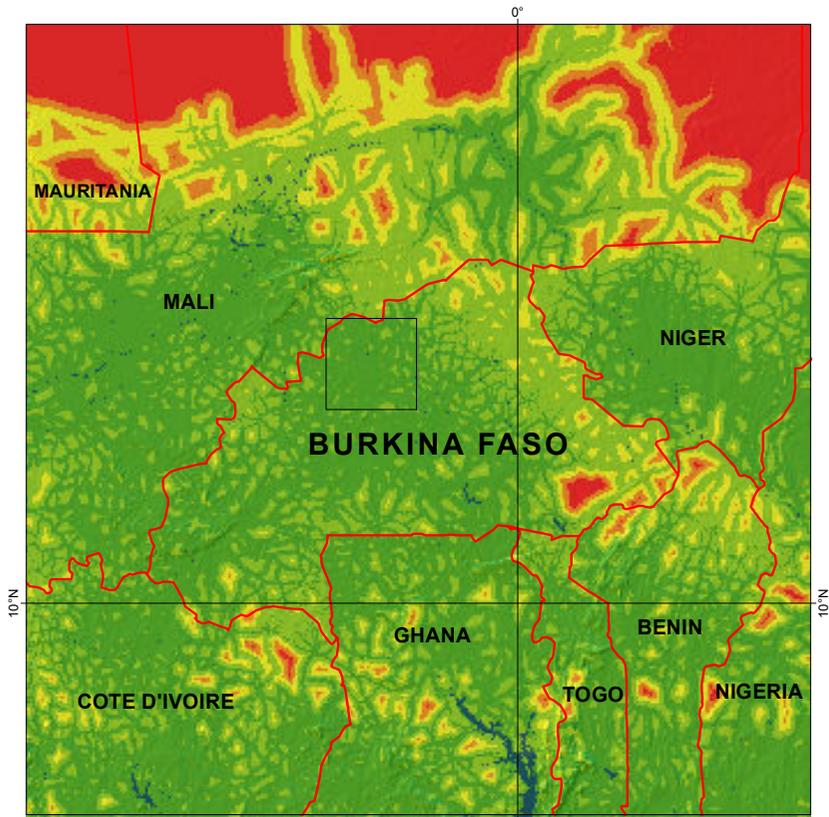

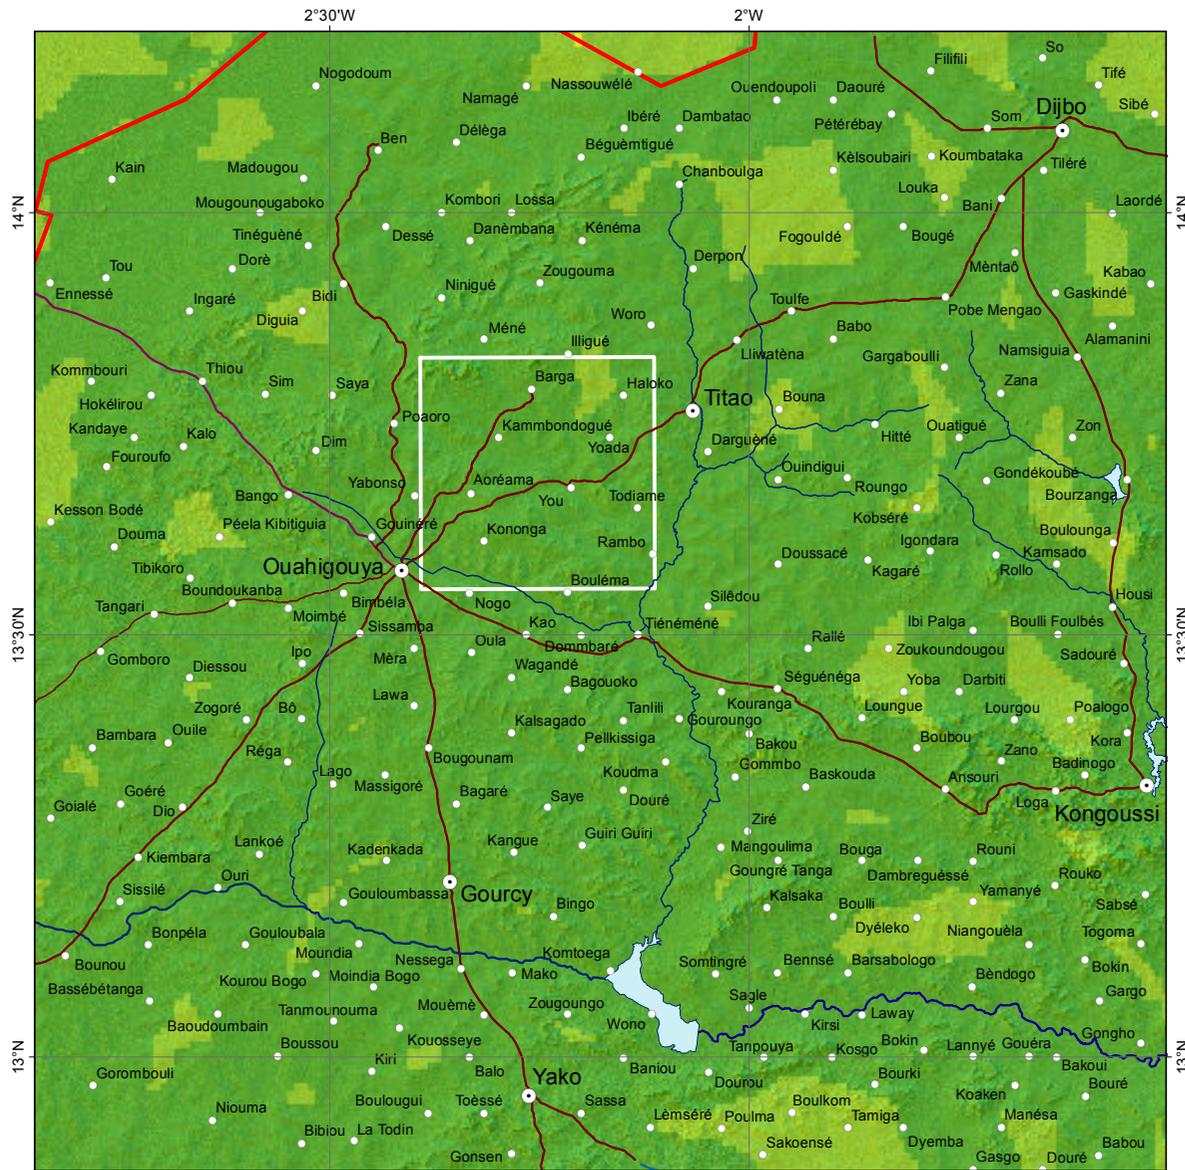

Corresponds to the map on the left

Human Population Density is the gridded number of persons per km² in 2005.

Citation: CIESIN (2005)

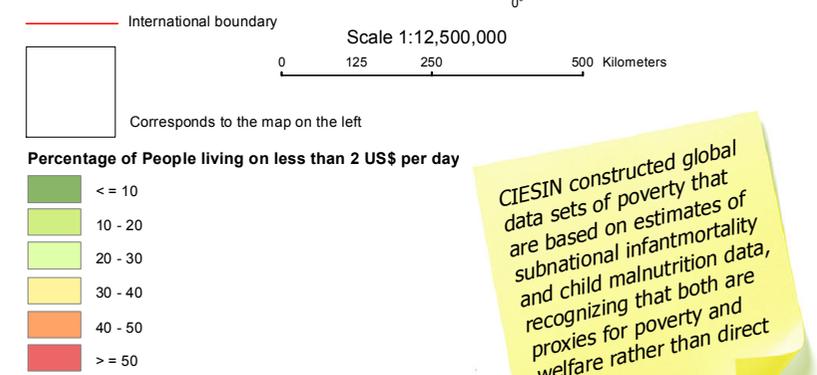

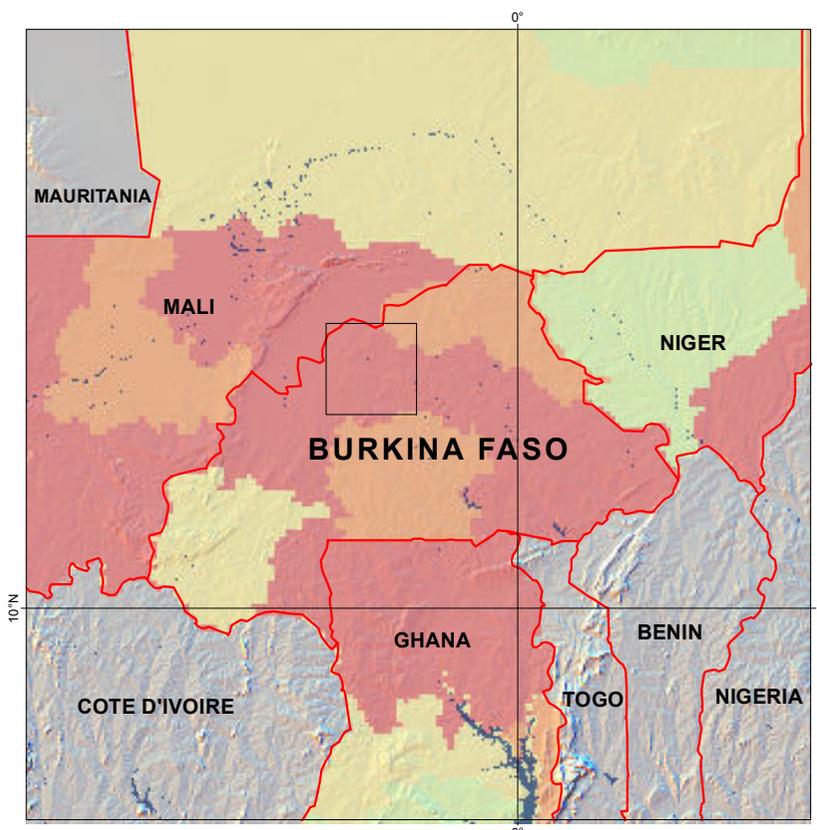

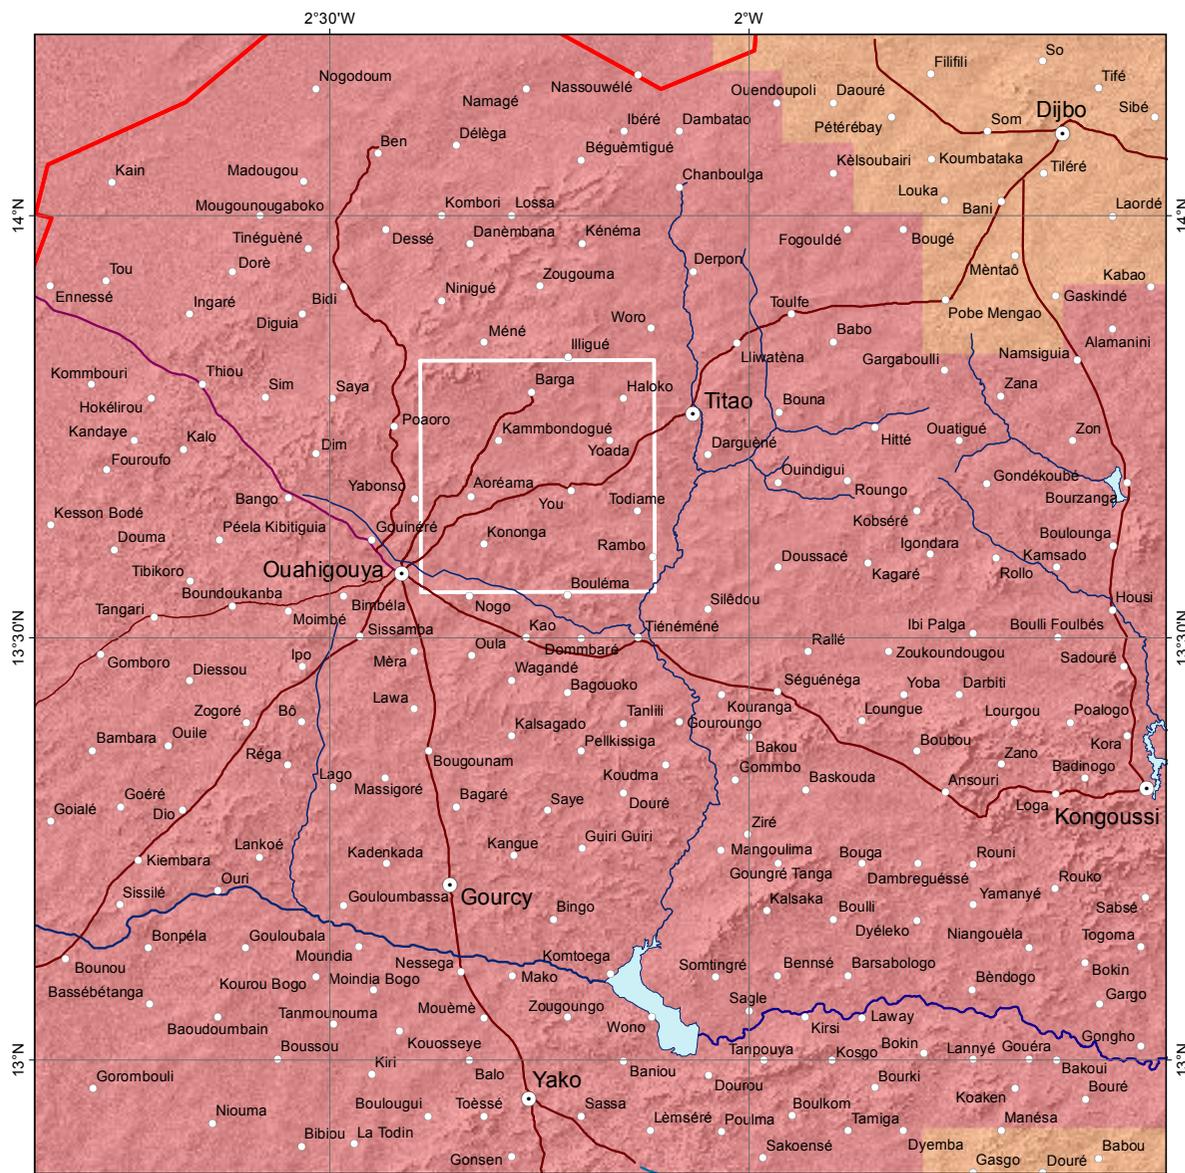

Market Access

Travel time is a measure of accessibility determined in the time (hours) taken to the nearest urban centre, of 50,000 people or more (taking different means of transportation into account)

Citation: Nelson (2008)

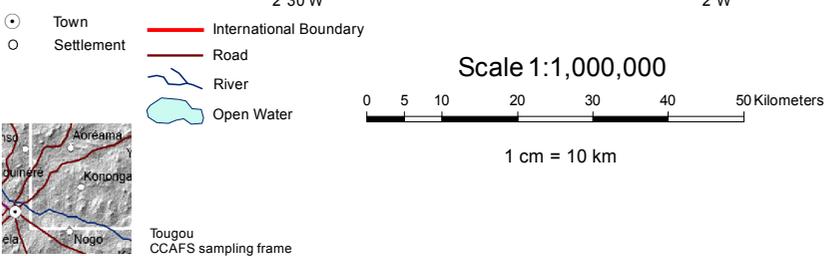

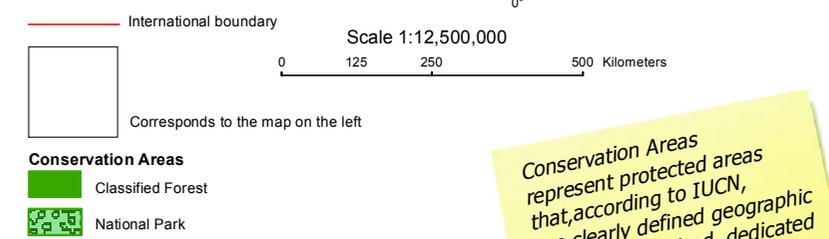

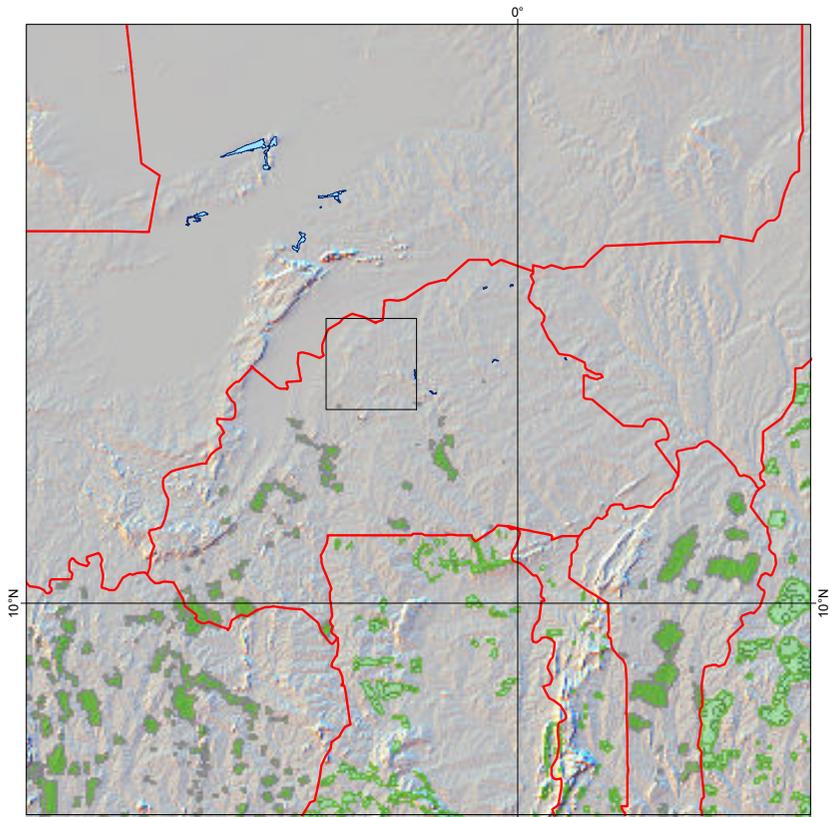

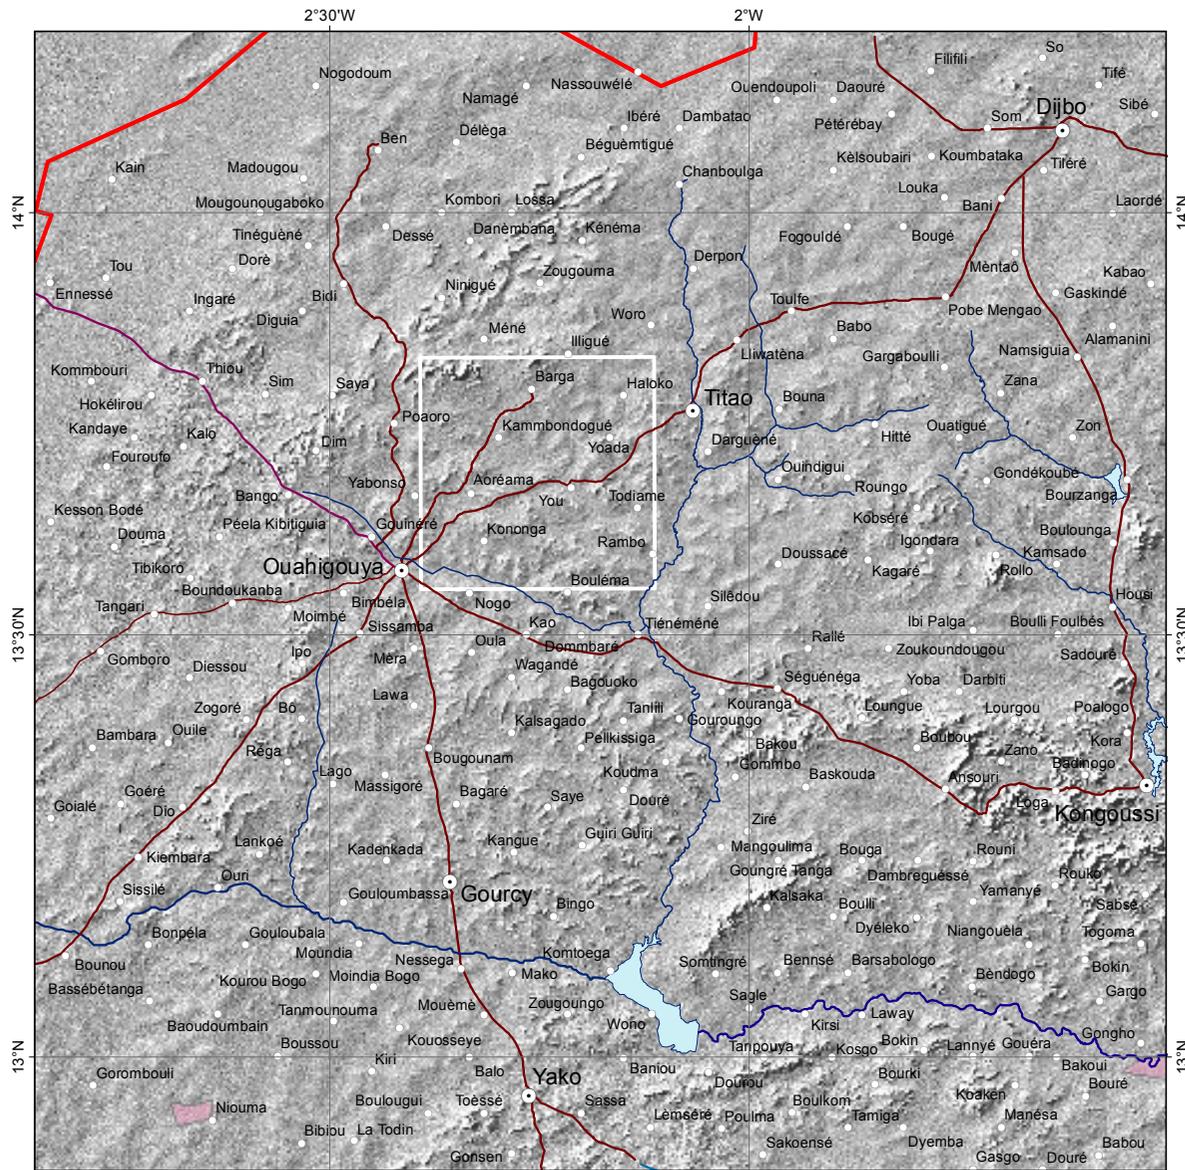

Poverty

CIESIN constructed global data sets of poverty that are based on estimates of subnational infant mortality and child malnutrition data, recognizing that both are proxies for poverty and welfare rather than direct measures.

Citation: CIESIN (2005)

Conservation Areas

Conservation Areas represent protected areas that, according to IUCN, are clearly defined geographic spaces, recognized through legal or other effective means, to achieve long-term conservation of nature with associated ecosystem services and cultural value.
