

# Development of a SOC Baseline: Experiences from Otjozondjupa, Namibia

Global Symposium on Soil Organic Carbon  
Rome, Italy

March 22, 2017

Ravic Nijbroek, Bas Kempen, John Mutua, Mats Soderstrom,  
Kristin Piikki, Simeon Hengari and Amon Andreas

# Themes

Situating the Problem

developing the baseline

Contextualizing SOC

making the baseline relevant

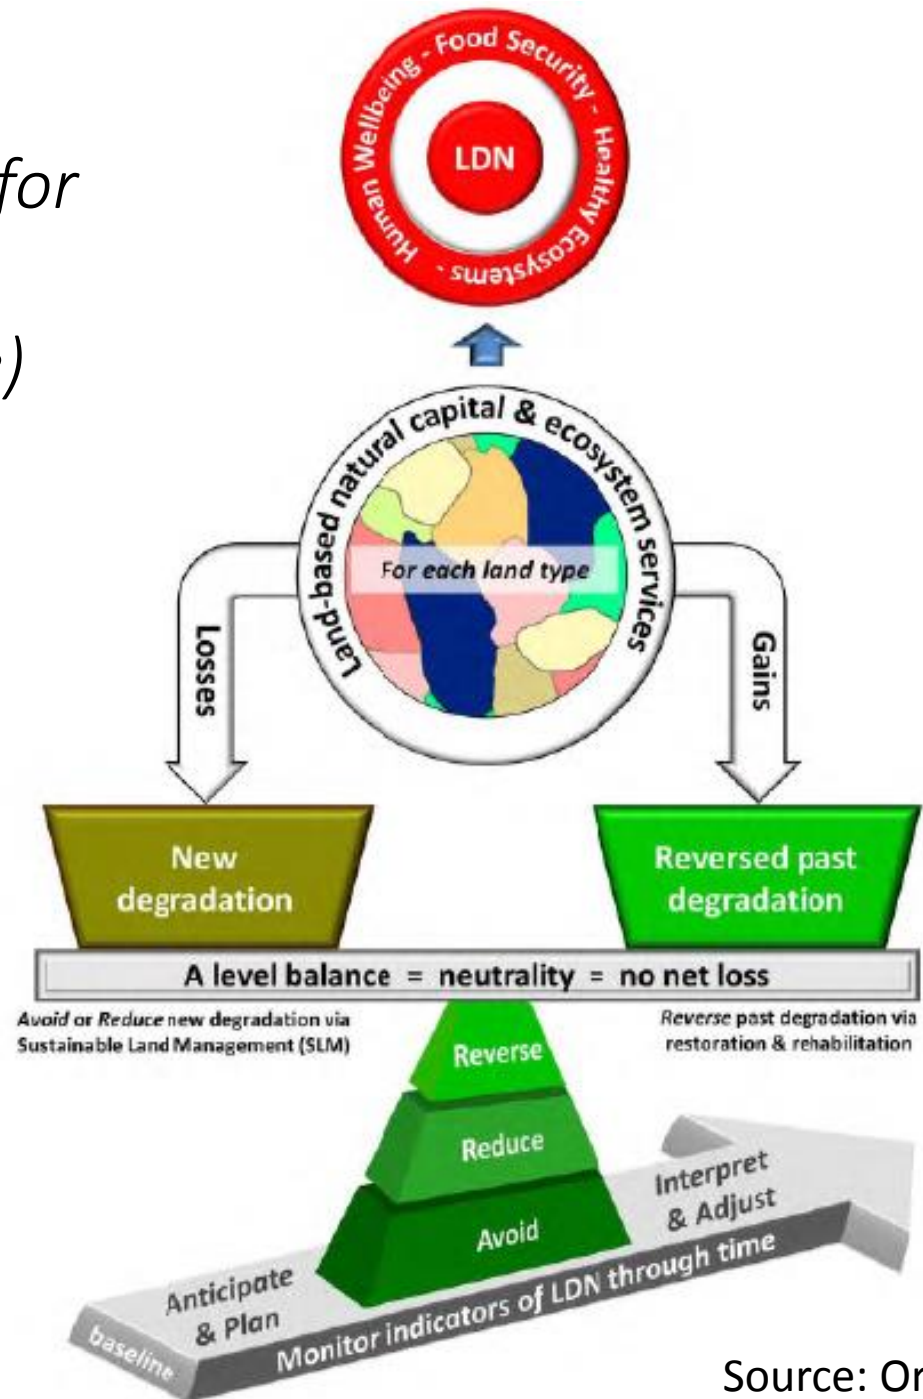

# Scientific Conceptual Framework for Land Degradation Neutrality (UNCCD Science Policy Interface)

## LDN Indicators:

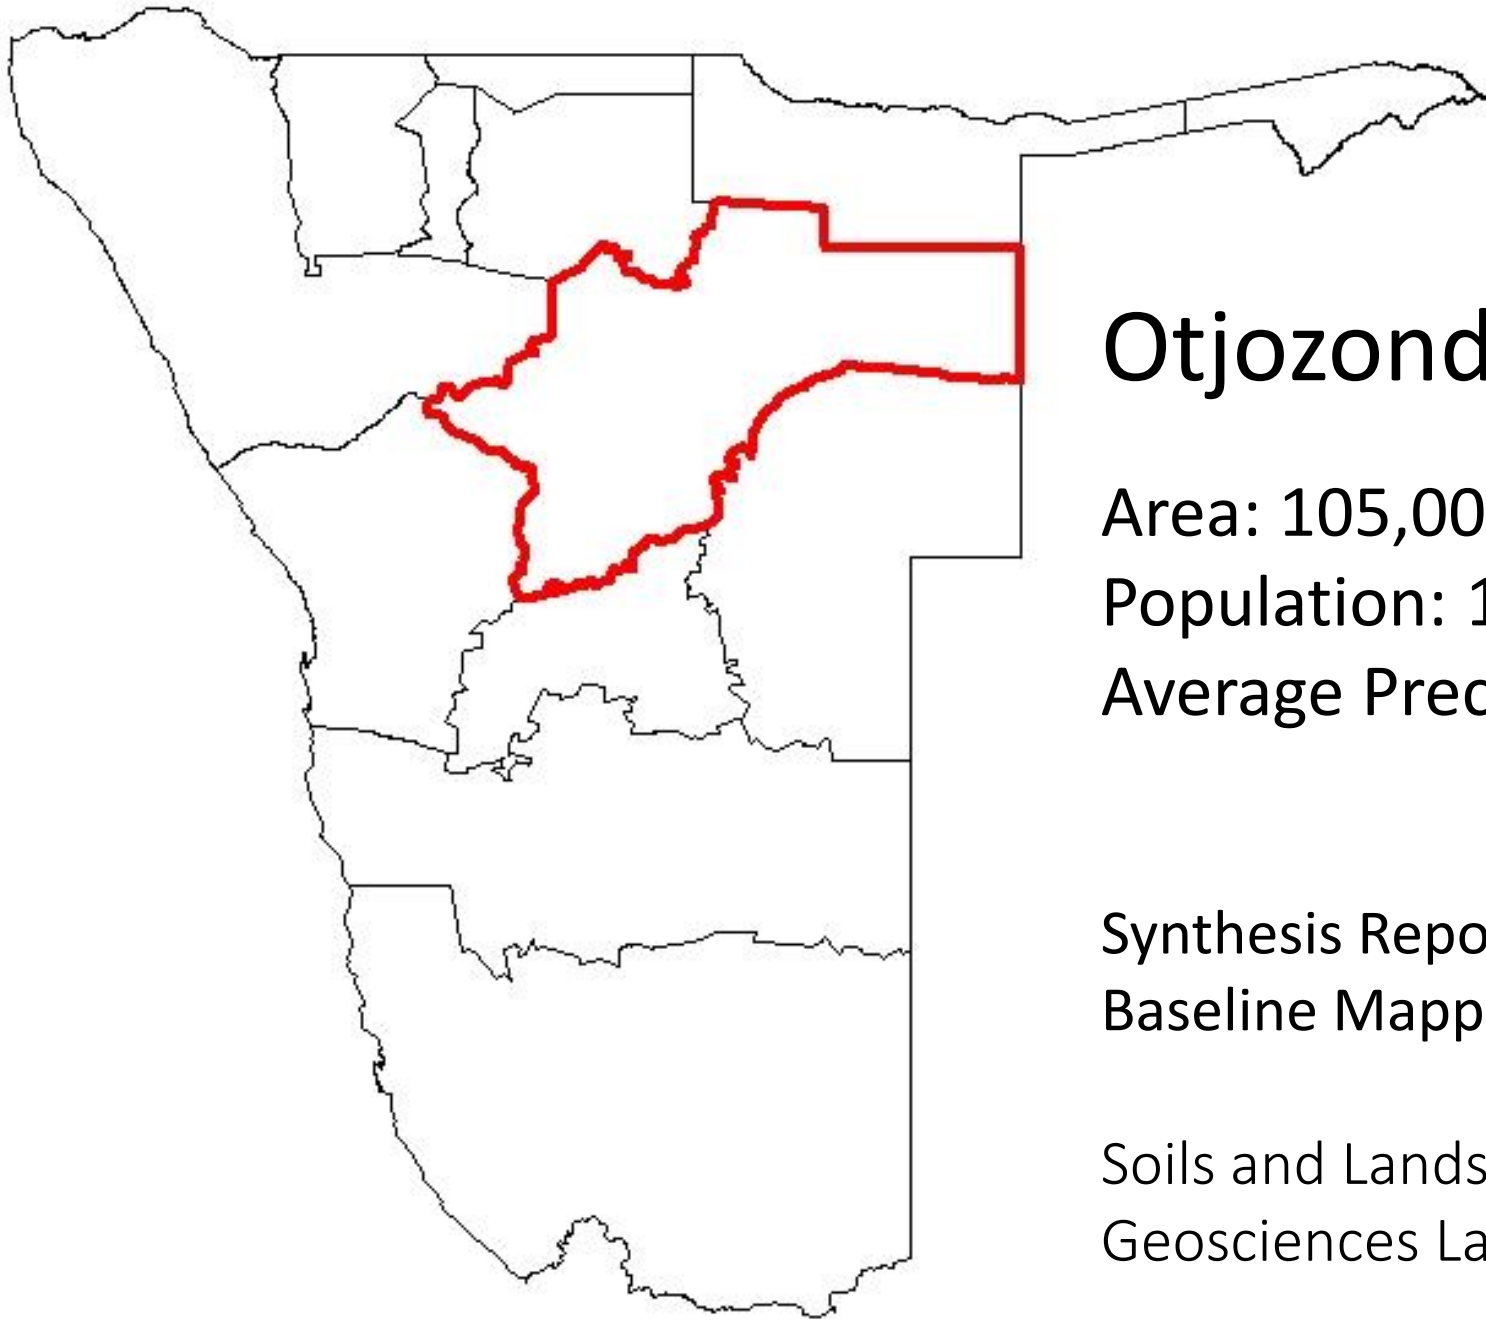

- Land Cover (land cover change)
- Land Productivity (net primary productivity)
- Carbon Stocks (soil organic carbon)
- Bush Encroachment (bush density)

## Otjozondjupa

Area: 105,000 km<sup>2</sup>

Population: 142,000 people

Average Precipitation: ~450 mm yr<sup>-1</sup>

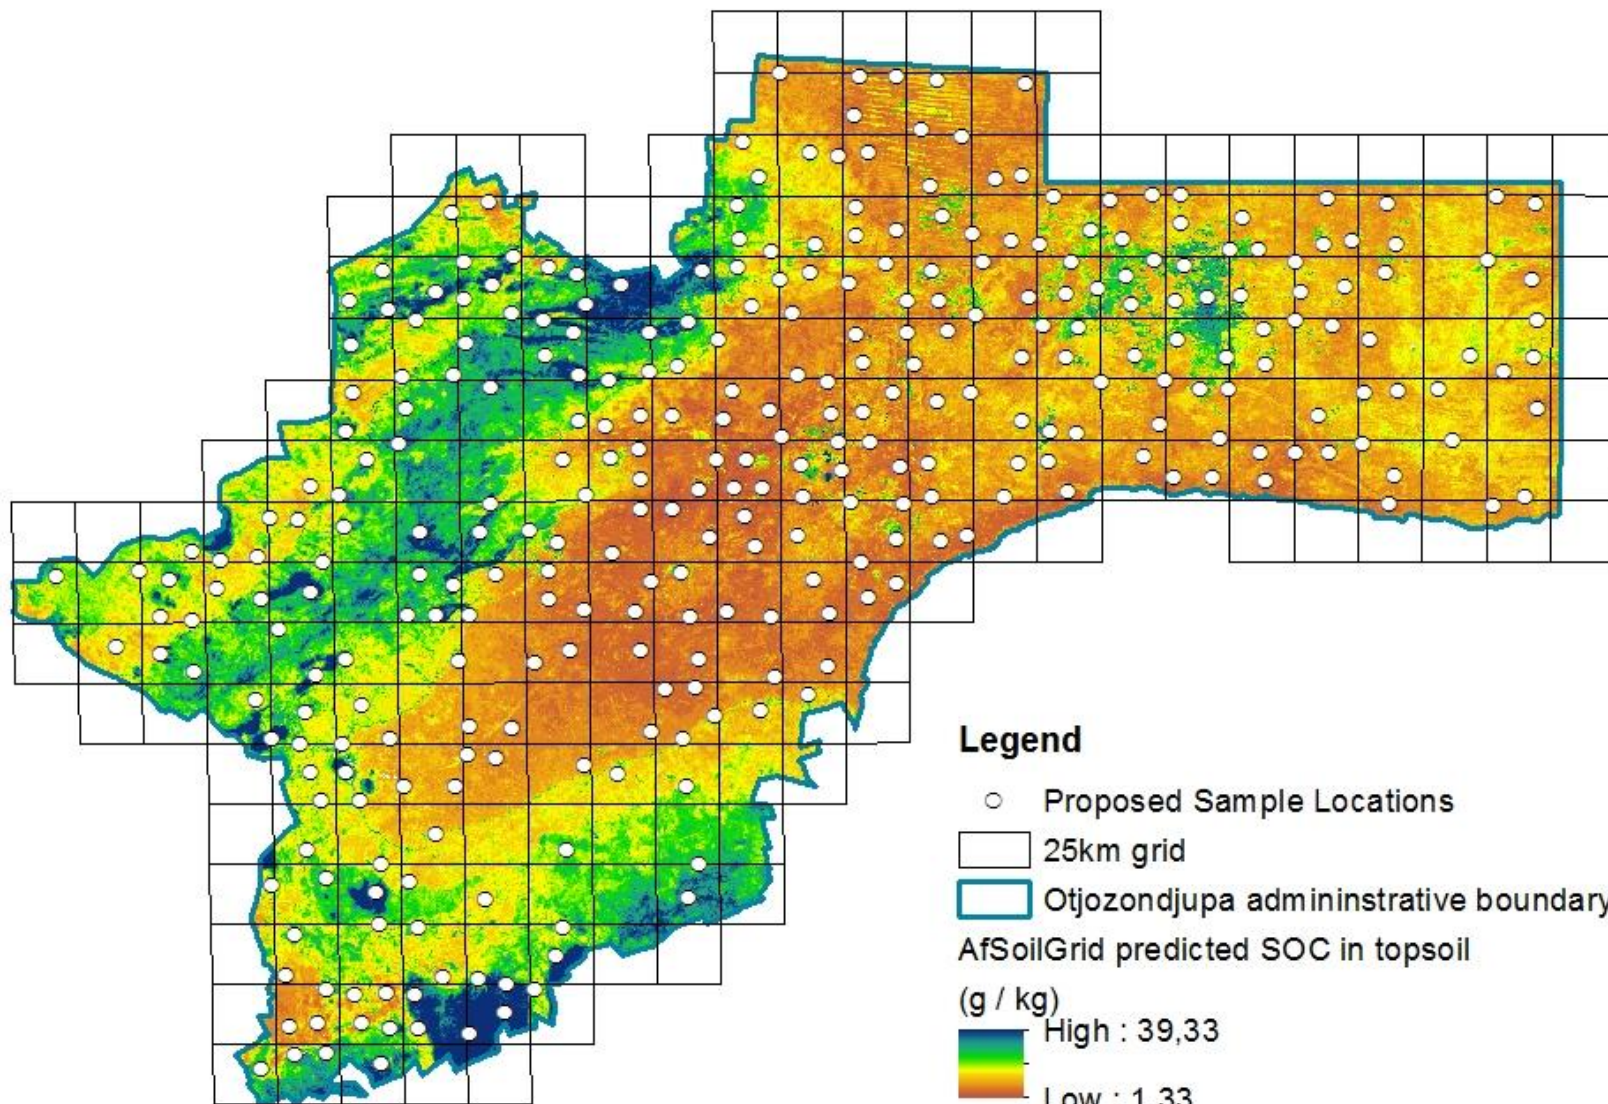

Synthesis Report of Methodologies for LDN  
Baseline Mapping (2016)

Soils and Landscapes for Sustainability (CIAT) and  
Geosciences Lab (ICRAF)

04.14.2016 11:19

**Legend**

- Proposed Sample Locations
- 25km grid
- ▭ Otjozondjupa administrative boundary
- AfSoilGrid predicted SOC in topsoil  
(g / kg)
  - High : 39,33
  - Low : 1,33

# Digital Soil Mapping

Method	Complexity
Inverse Distance Weighting (IDW)	Medium
Kriging	Medium-High
Regression Kriging with SoilGrids	High
Regression Kriging with small covariate stack	High
Random Forest with large covariate stack	Very High

Final Product:

Sample Locations

Target: 325

Reached: 237

Usable profiles: 219

# Contextualizing the SOC Baseline

# Contextualizing the SOC Baseline

1. “ ... we know the criteria for MRV.”

– Martial Bernaux

- Consistency
- Completeness
- Accuracy
- Transparency
- Comparability

Local Concerns:

1. LDN must be locally owned including data collection, data analysis, and baseline production.
2. LDN must be integrated with ongoing policies and activities.

# Contextualizing the SOC Baseline

2. “ ... the approach embraces integrated landuse planning.”  
– Barron Orr

Two ongoing national projects and policies:

1. Integrated Regional Landuse Planning (IRLUP)
2. Debushing Program

# Land Degradation Neutrality in Otjozondjupa, Namibia

Land cover 2000

Land cover 2016

Soil Organic Carbon stock (0-30cm)

Soil Organic Carbon (0-30cm)

Soil Organic Carbon (30-100cm)

Density of shrubs (<1.5m)

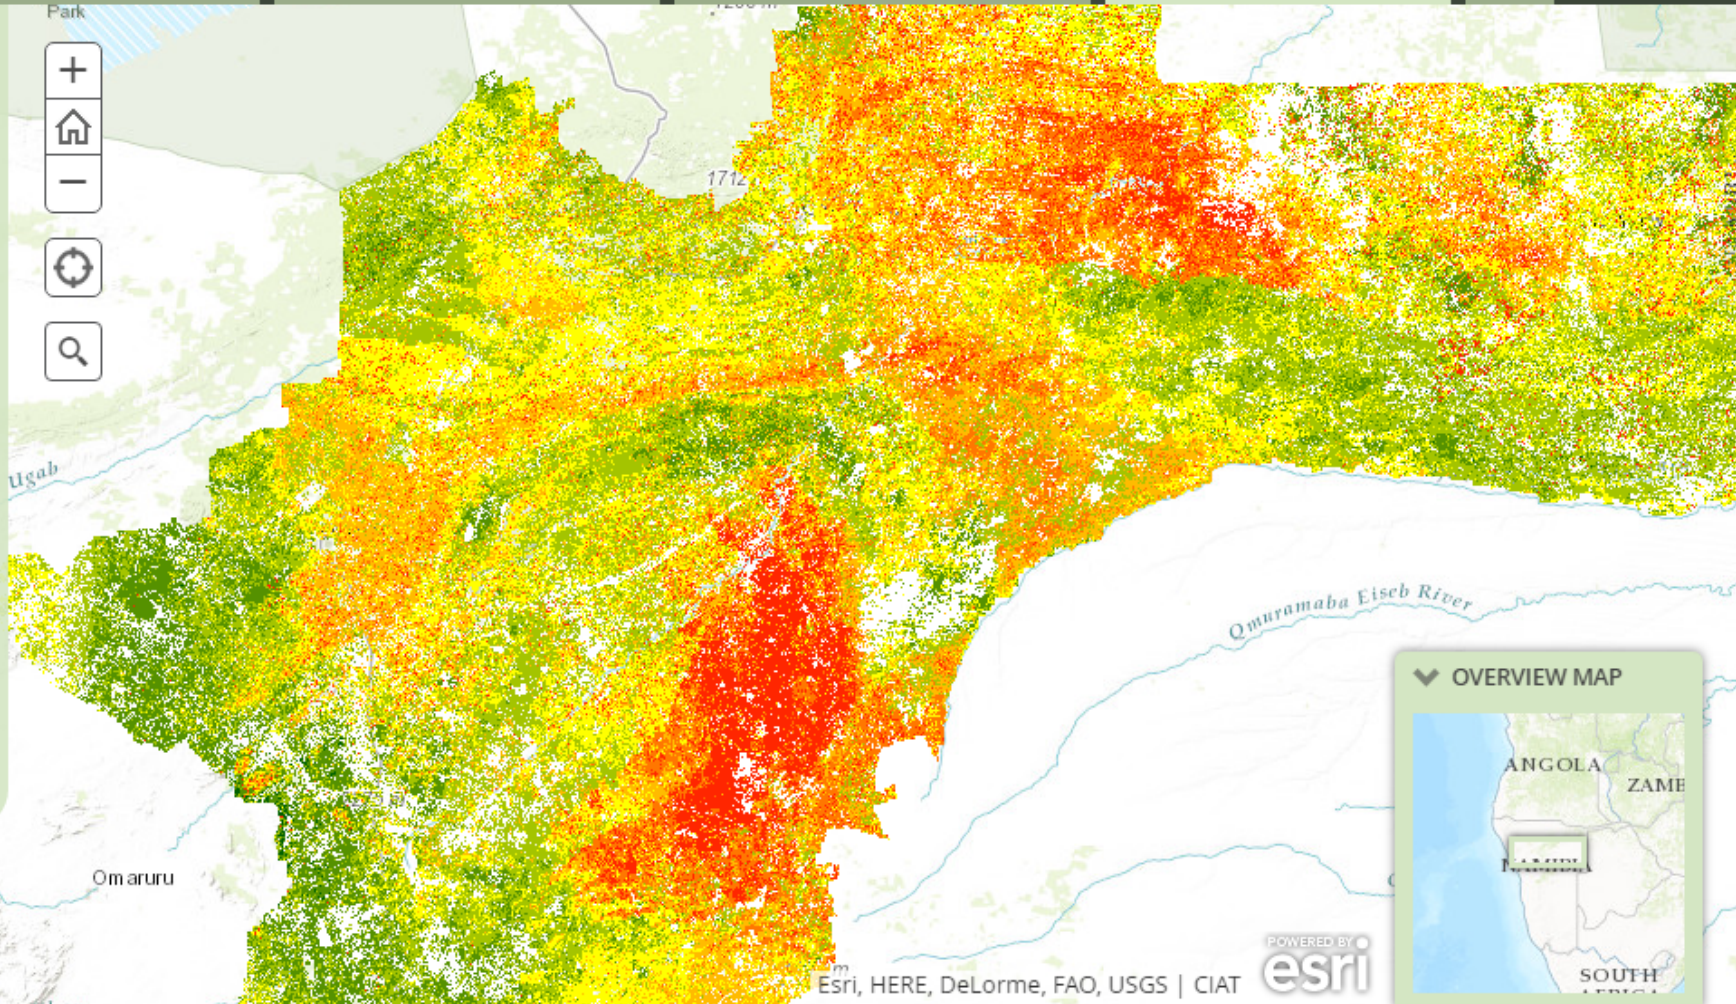

Density map of shrubs (*height < 1.5m*) in Otjozondjupa region, Namibia. It is derived from satellite images (Landsat 8 OLI/TIRS) and field data collected in April-May 2016. The maps are available for download as [GeoTIFF](#) files from this [link](#).

Date of release: August 2016

## Density of shrubs (less than 1.5m)

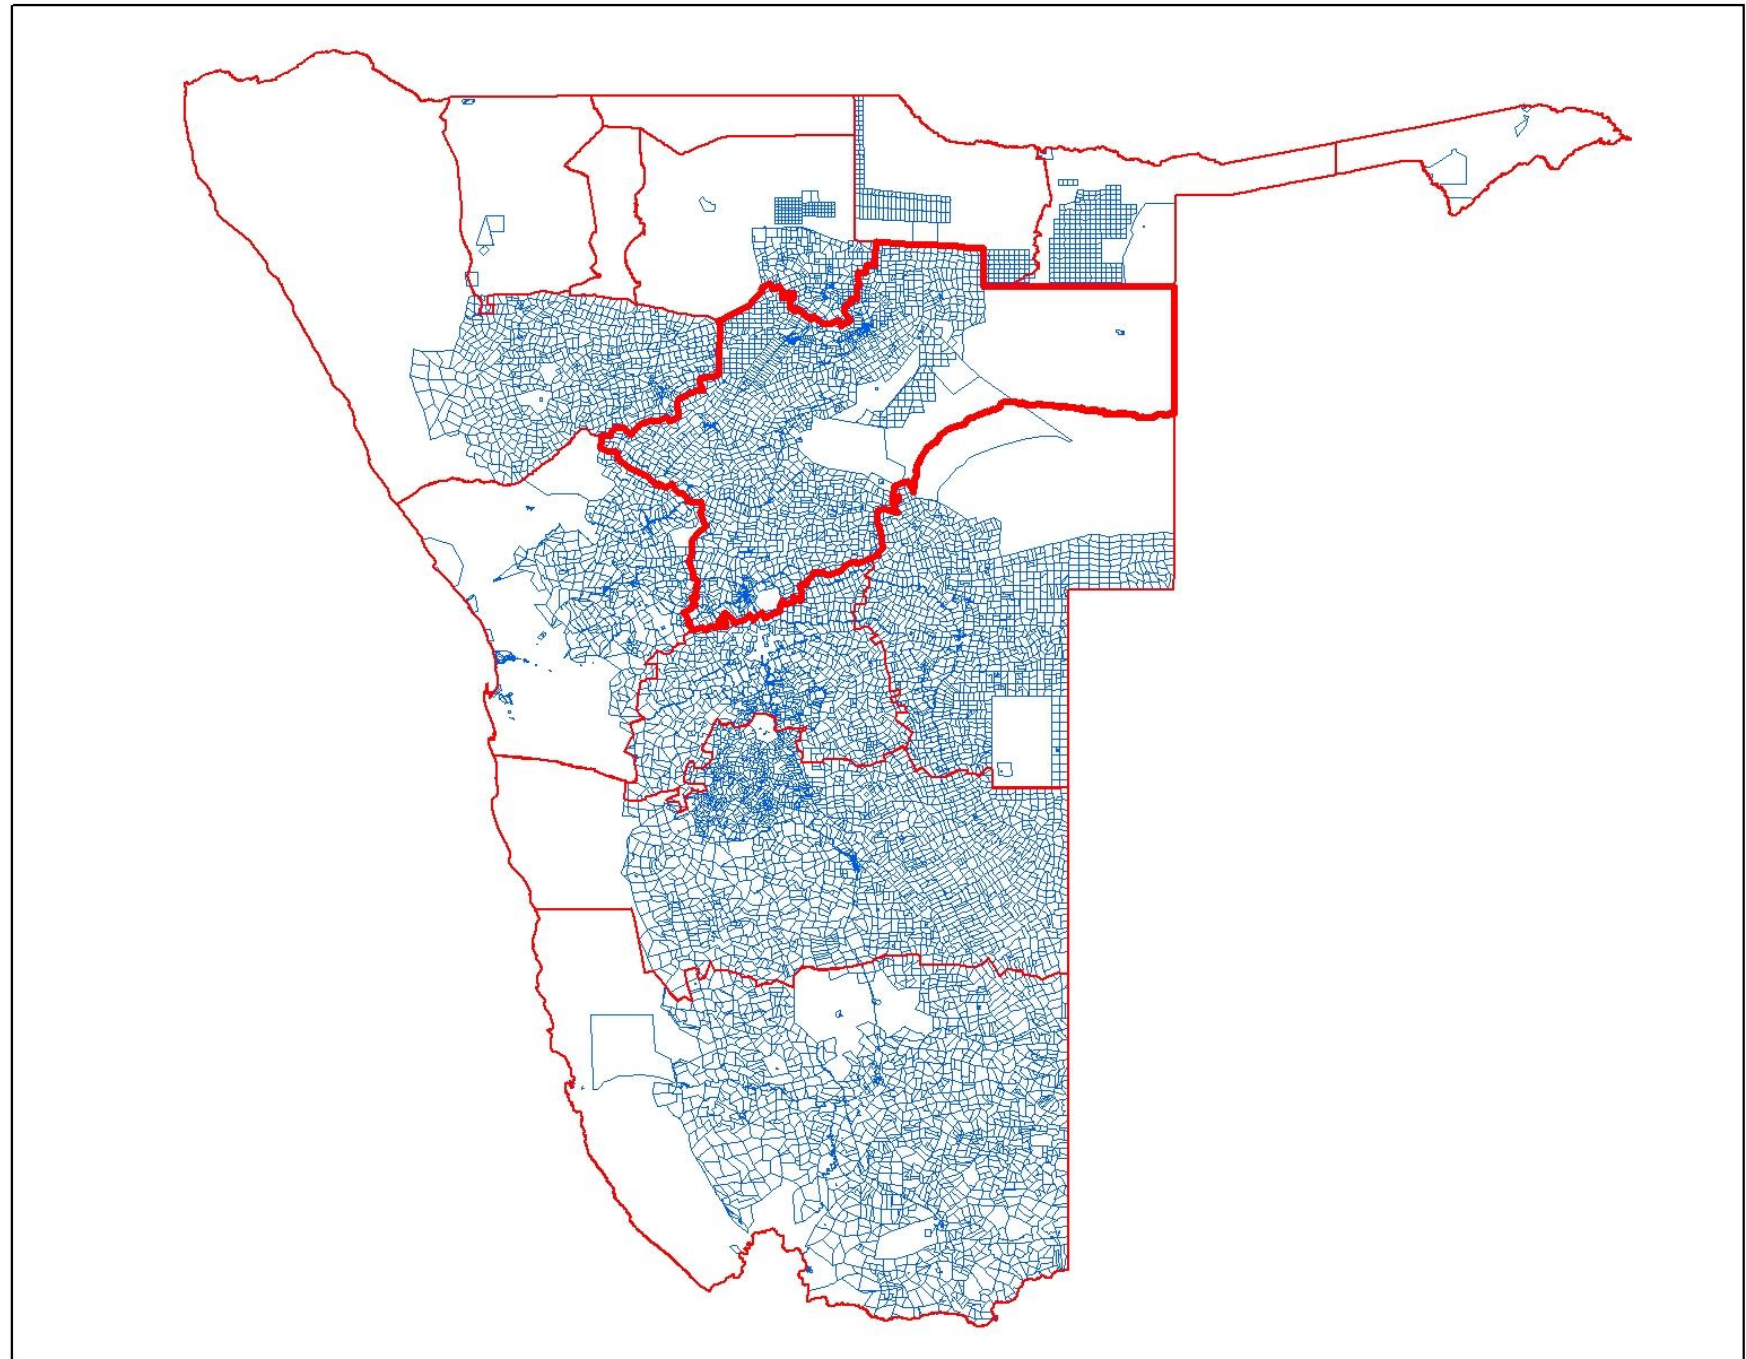

Shrubs per hectare:

Land cover change type 2000 to 2016	Total SOC stock (kg)	Average SOC stock (kg/m <sup>2</sup> )
Bush land to Grassland	224,835	1.59
Grassland to Bush land	152,676	1.28
Grassland to Grassland	55,817	1.67

We have Land Cover,  
what about **Land Use**?

# Contextualizing the SOC Baseline

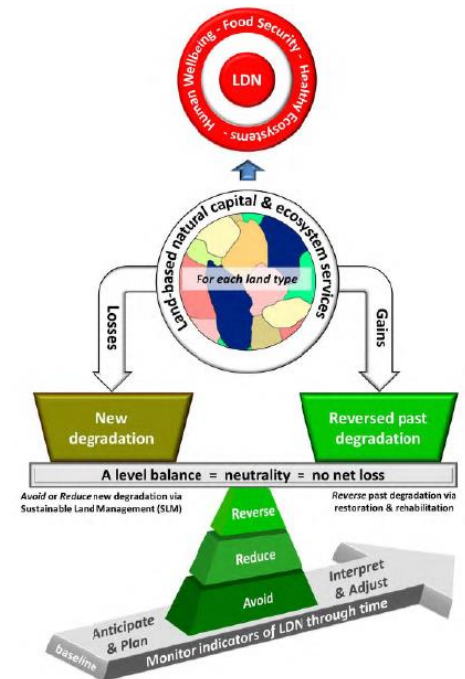

3. “Socio-economics was the main driver”  
- Johan Six

“... until a theoretical explanation – based on human choice – for **self-organized and self-governed** enterprises is fully developed and accepted, **major policy decisions** will continue to be undertaken with a presumption that individuals cannot organize themselves and always **need to be organized by external authorities.**”

— Elinor Ostrom, *Governing the Commons*, p.25

# Section 6.7.5: The role of stakeholder engagement

- “For any LDN project to be effective, **governments must:**
  - Develop inclusive, participatory consultation and outreach programmes
  - to engage stakeholders in the co-production of knowledge and mutual learning
  - at both the national and local levels, ... accomplished through
  - the establishment or leveraging of multi-stakeholder platforms
  - at each relevant scale, with established links across scales” (p. 67).

# Conclusions

- We have enough tools to develop SOC baselines
  - Build on existing freely available data such as SoilGrids
- Contextualize SOC - make the data relevant!
  - Integrated Landuse Planning

Understanding how farmers and communities transition to self-governance (as opposed to centralized control and management) requires more attention by the SOC community in order to achieve soil carbon sequestration.

“Time is the natural resource in shortest supply.”

— Elinor Ostrom
