The Archway Investment Fund

Bryant University

First Quarter 2017 Report

Fund Objectives

The Archway Investment Fund's (AIF) objective is to give students real world experience in investing as well as seeking to make quality long-term value investments while considering Environmental, Social, and Governance (ESG) factors.

Fund Overview

The AIF had an initial funding of \$200,000 in September 2005. Since its inception, the AIF has received an additional \$500,000 through cash infusions. This invested capital has allowed the Fund to invest in individual stocks as well as sector ETFs. As of the end of Q1 2017, the Fund has a market value of \$1,340,818.

The AIF gives students experience in creating a diversified portfolio by investing in companies for their long-term value. The Fund is managed by student Security Analysts and Portfolio Managers. Students who manage the AIF take two courses while managing the Fund to gain insight into the security selection and portfolio management process. In the first class, AIF Security Analysts learn how to research and analyze different companies through the use of various valuation models, ratio analysis, and financial statement analysis. In the second course, AIF Portfolio Managers apply the knowledge that they learned in the first course to managing the Fund while also learning more about running the Fund as a whole. In this class, student Portfolio Managers are divided into market sector teams and actively manage each sector's holdings. Students also stay updated on financial markets, conduct research on companies of interest, and give stock presentations to students from both courses.

Sustainability in the Fund

The Fund has taken a recent interest in the inclusion of ESG factors to the Fund's investment approach. Both Portfolio Managers and Security Analysts have been conducting independent research as well as receiving first hand insight from industry leaders about ESG investing. The Fund is interested in ESG investing because it helps identify risk factors and may aid in generating excess returns after adjusting for risk. Currently, Security Analysts and Portfolio Managers are working to find possible ways to formally incorporate ESG investing into the Fund's investment approach.

Investment Strategy

The Fund's strategy is to purchase stocks for less than their intrinsic value based on both value and growth considerations to achieve risk adjusted returns that equal or exceed benchmark returns. The overall benchmark used in the Fund's performance evaluation is the State Street SPDR S&P500 Exchange Traded Fund (SPY), while benchmarks used for individual sectors are the corresponding sector SPDR. Each sector is initially weighted in the portfolio based on

their weighting in the SPY and are then adjusted to reflect current market conditions. Investment opportunities are researched by individual sector teams and then presented to all Security Analysts and Portfolio Managers in the Fund. Security Analysts and Portfolio Managers then vote on each investment opportunity, with a majority of votes needed to undertake the investment. While the Fund allows for the purchase of foreign equities, the Fund remains heavily weighted in domestic assets. At times, the Fund will use options as a method to control risk. Option use is limited to covered call and protective put strategies. Options are used only to control risk and the underlying security must be held in the Fund.

Performance

Value of \$10,000 Invested Since Inception

AIF Returns vs SPY

	YTD	6 MONTHS	1 YEAR	2 YEAR	5 YEAR	SINCE INCEPTION
AIF	7.49%	12.78%	17.77%	10.40%	13.51%	7.66%

All numbers are as of March 31, 2017.

Portfolio characteristics includes only equity holdings and excludes all index funds held in the portfolio.

Ratio analysis includes actual numbers and future projections from Bloomberg. P/E, P/CF, P/B and dividend yield are calculated using current prices and trailing twelve month figures. Average market capitalization is a weighted average of current market capitalizations. PEG ratios are calculated using Bloomberg twelve month forward projections.

SPY returns are total returns reported by Morningstar.

Performance numbers longer than one year have been annualized for comparison and are adjusted for cash infusions.

Returns on individual securities include both realized and unrealized gains. Returns presented on individual securities are holding period returns and are not annualized and do not include transaction costs.
