Title: High Frequency Microphone Measurements for Transition Detection on Airfoils - Risø C2-18 Appendix Report
Department: Aeroelastic Design - Wind Energy Department

Risø-R-1645(App.2)(EN)
May 2008

Abstract:

This report is an appendix to [1]. A comprehensive set of results are presented which allows the transition on airfoils to be detected. Results for the Risø C2-18 profile are presented.

List of symbols

- σ Sample standard deviation [Pa]
 α Angle of attack [deg]
 x Chordwise position [m]
 $Re = \frac{cU}{\nu}$ Reynolds number [-]
 P_s Power spectrum of \mathbf{Y} [Pa]
 f_1, f_2 High and lower bound of filtered σ [Hz]
 μ_n Statistical moments of P_s of order n [Hz]
 x Chordwise coordinate (positive from leading edge to trailing edge) [m]
 x_{tr} Transition point [m]
 c Chord length [m]
 $0.5\rho U^2$ Dynamic pressure [Pa]
 U Incoming velocity (in windtunnel) [m/s]
 ν Kinematic viscosity [m^2/s]

1 Introduction

For a full introduction refer to [1].

Important information !

In figures where Xfoil data is presented the filenames are also given and the corresponding simulation parameters can be found in section 3. In Xfoil the transition point is calculated at the same Reynolds and Mach number as the experiment it is compared to, but in most cases a free transition is specified (corresponding to a clean profile) even though roughness etc. is used in the experiment.

If the following is specified, it means that the standard deviation of pressure fluctuations σ is calculated as the sample standard deviation

$$f_1 = 0\text{Hz}, f_2 = 25000\text{Hz}$$

If the following is specified, σ is calculated using Fourier data and the values are lower than the physical data. Refer to [1] for details.

$$f_1 = 2000\text{Hz}, f_2 = 25000\text{Hz}$$

Risø's research is aimed at solving concrete problems in the society.

Research targets are set through continuous dialogue with business, the political system and researchers.

The effects of our research are sustainable energy supply and new technology for the health sector.
