Local seismic tomography velocity and attenuation structure and joint interpretation

Stage 1 : Catalogues and Phase Picking

S.Mousavi, M. Korn, D. Rößler, K. Bauer

Out line:

Outlook on stages of project

- Data sources and Catalogue
- Phase picking

Main Goals

Image and identify fluid path by:

1- structural image of P- and S-velocities

2- structural image of seismic attenuation and to separate scattering and intrinsic attenuation

POTSDAM

Short over view on whole process

Stage 1: Preparation of the database and travel time picking

I) Determination of one representative 1D model hypocenter locations for the whole region as a starting model of the 3D inversion. The program **VELEST** will be used.

Stage2:

II) Inversion for a 3D model

The associated package **SIMULPS/SIMUL2000** is of common use in local earthquake tomography.

A damped least-squares algorithm for joint inversion for 3D seismic velocity structure (vp, vp/vs) and hypocenter locations will be applied. **GFZ**

Stage 3: Seismic attenuation structure

Tomographic inversion of direct P wave spectral decay parameter t* for seismic attenuation structure will be done.

Stage 4: Joint interpretation of the results

UNIVERSITÄT LEIPZIG

All Events

Data base 2001-2008

The list of data consists of 7871 earthquake

Lat	Lon	depth	num	mag(max)
50.199	12.458	9850	315	1.4
50.199	12.458	10340	200	1.8
50.207	12.445	10190	248	2.2
50.207	12.451	9280	320	2.5
50.204	12.462	8680	111	2.4
50.213	12.447	9380	576	3.8
50.214	12.444	10130	462	2.7
50.215	12.453	9840	148	2.4
50.21	12.451	10810	118	2.7
50.209	12.452	10790	566	2.1

The surface along latitude and longitude has been divided to 0.01 degree grid steps and in the depth to 1km grids So the largest earthquake in each cube has been selected and the rest of earthquakes with similar characteristics omitted.
