10-12 September 2012
Bangkok, Thailand

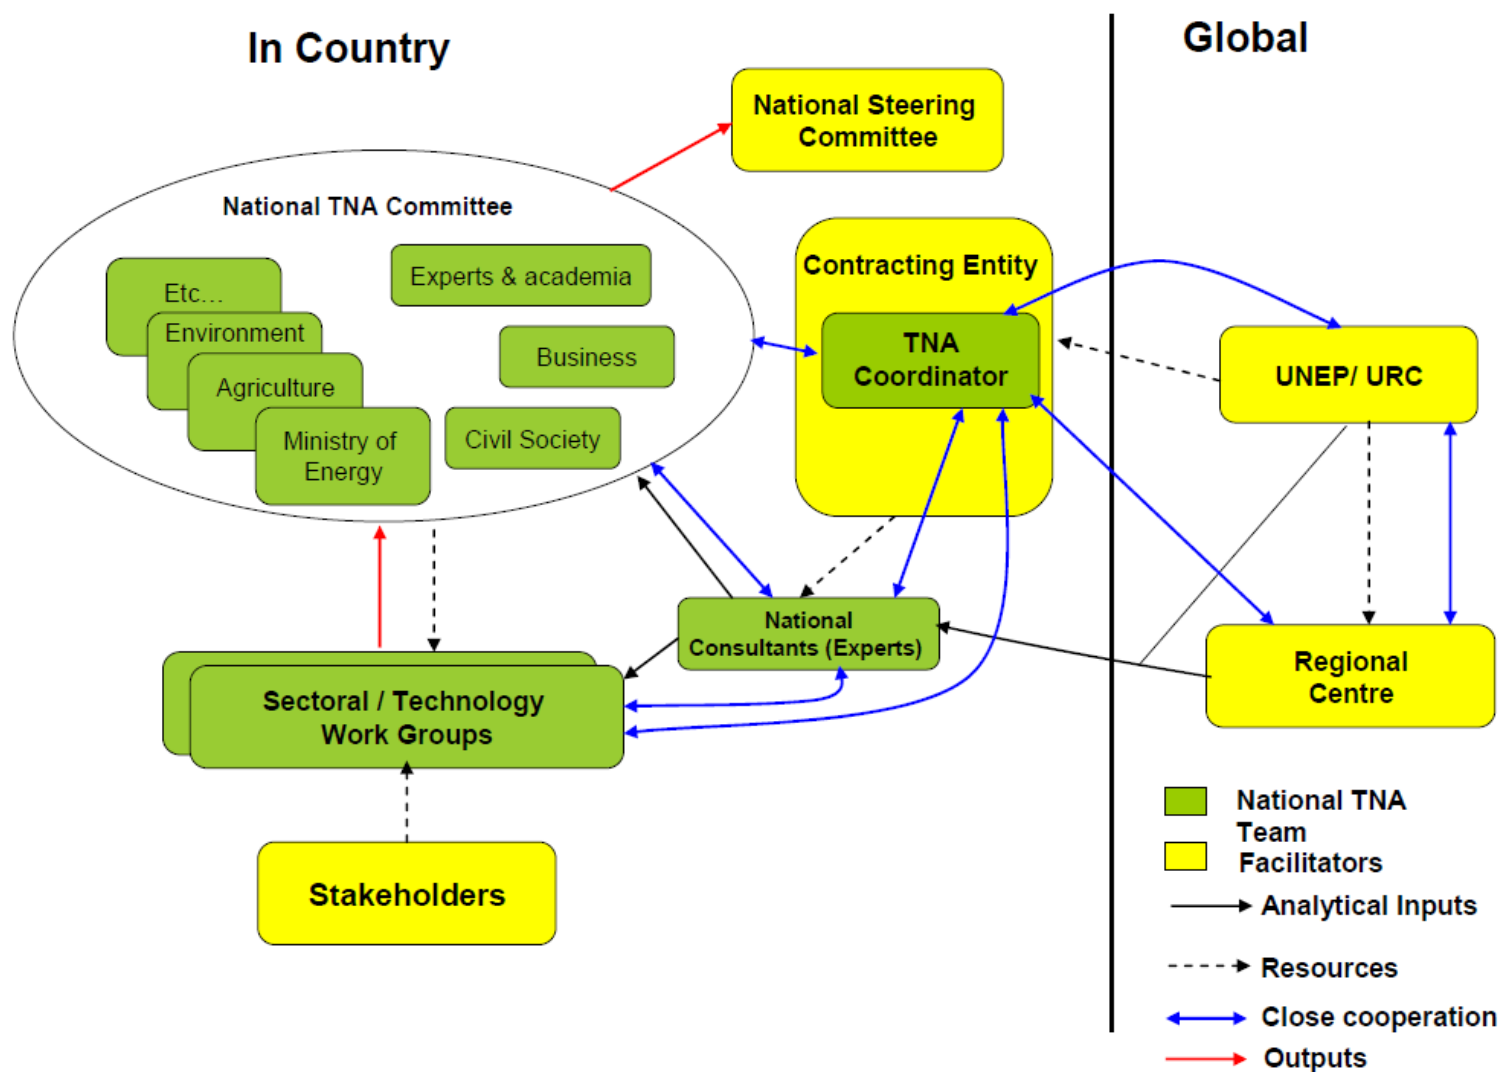

Contents

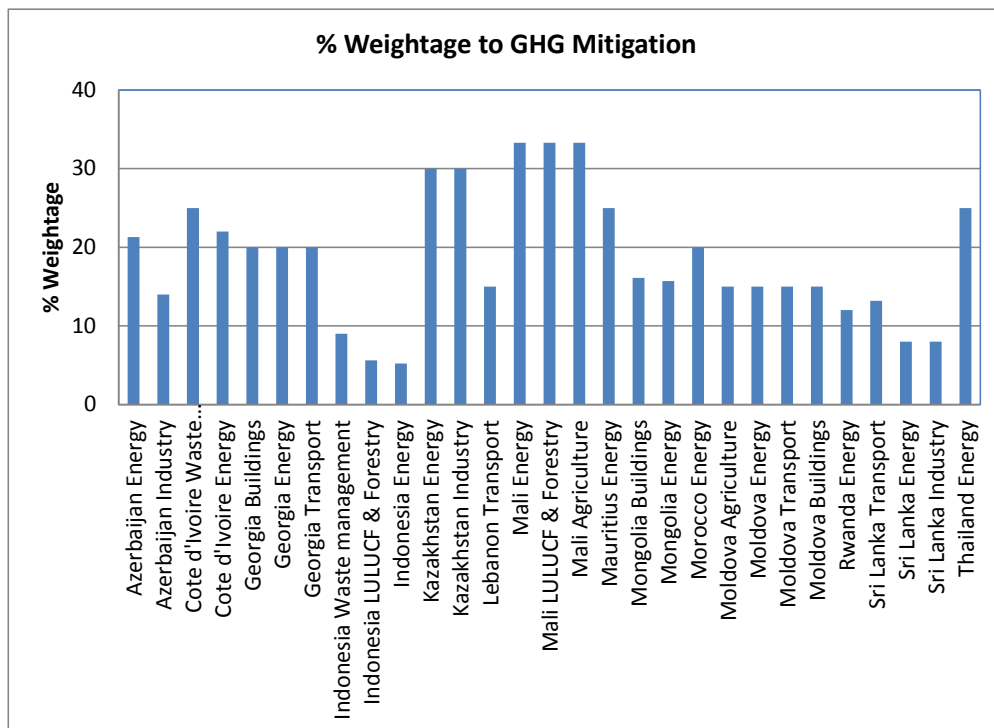

- TNA Process
- Outputs of Current GEF-TNA
- Framework for relating TNA with LCDS and NAMA
- Conclusion

Institutional Structure for TNA

Multi Criteria & Mitigation

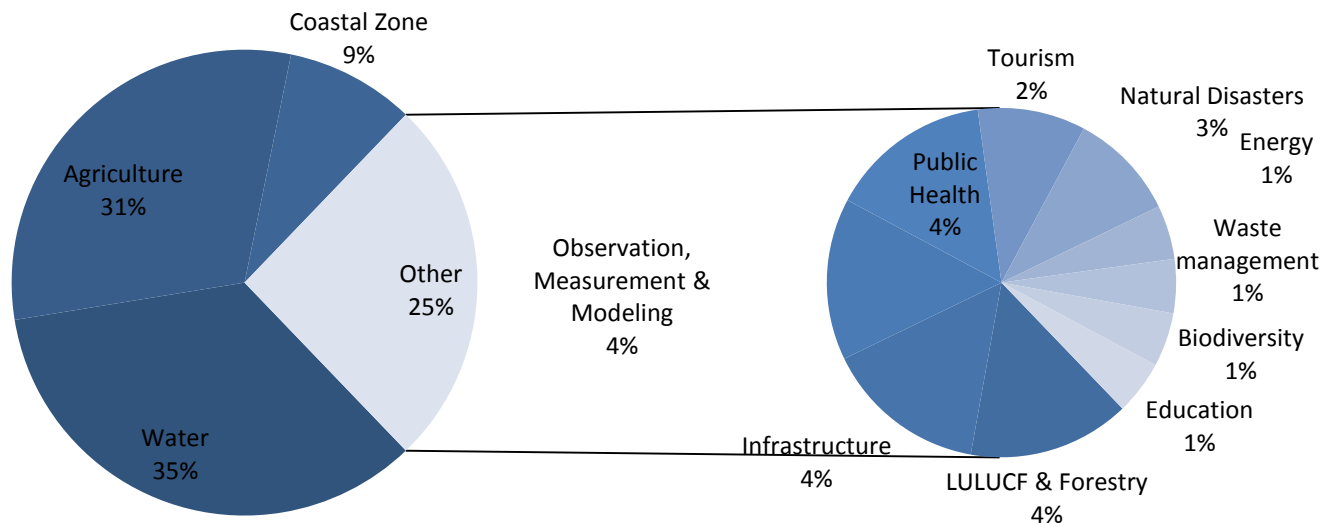

Preliminary assessment of TNA reports (Current round)

Sector prioritised by countries

Prioritized Mitigation Sectors

Prioritized Adaptation Sectors

Technologies prioritised by countries (Preliminary assessment)

Most prevalent prioritized mitigation technologies:

- Solar PV
- Hydro power
- Wind energy
- Combined heat and power
- EE lighting
- EE buildings
- Mode shifts (Transport)
- Urban Mass Transit
- Biogas
- Tillage practices

Most prevalent prioritized adaptation technologies:

- Sprinkler and Drip Irrigation
- Rainwater Harvesting
- Rainwater Collection from Ground Surfaces - Small Reservoirs and Micro-catchments
- Wetland restoration
- Increased reservoir technology
- Sustainable Livestock management
- Agro-forestry
- Biotechnology for Climate Change Adaptation of Crops
- Crop diversification and New Varieties
- Seasonal to Inter-annual Prediction

TNA Outcomes

- Nationally appropriate technologies
 - Though information on scale of implementation not clear
 - Pure carbon measures like CCS also generally ignored
- National appropriate Policies / programs that enable these technologies
- Project ideas related to technologies / programs

NAMA definition

"developing country parties will take nationally appropriate mitigation actions (NAMAs) in the context of sustainable development, supported and enabled by technology, financing and capacity building, aimed at achieving a deviation in emissions relative to business as usual emissions in 2020"

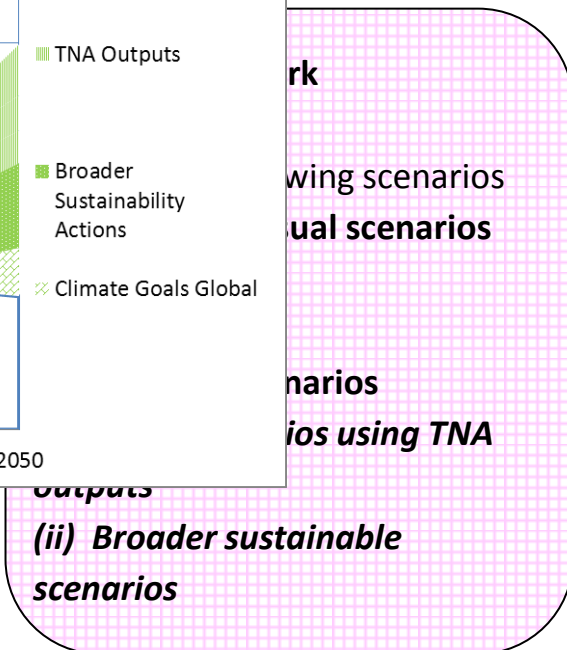

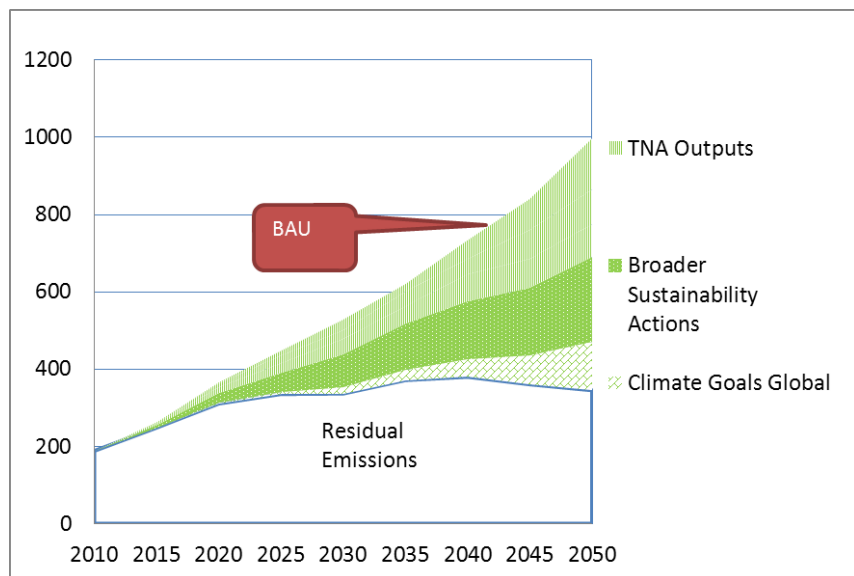

Cancun Agreements

MRV International Tier

1. National Communications (NC) every 4 years and Biennial reports (BER) every 2 years
 - Biennial reports Measurement (M) and Reporting (R) part of NAMA
2. International Consultations and Analysis (ICA) by technical experts
 - Analysis of information in BER

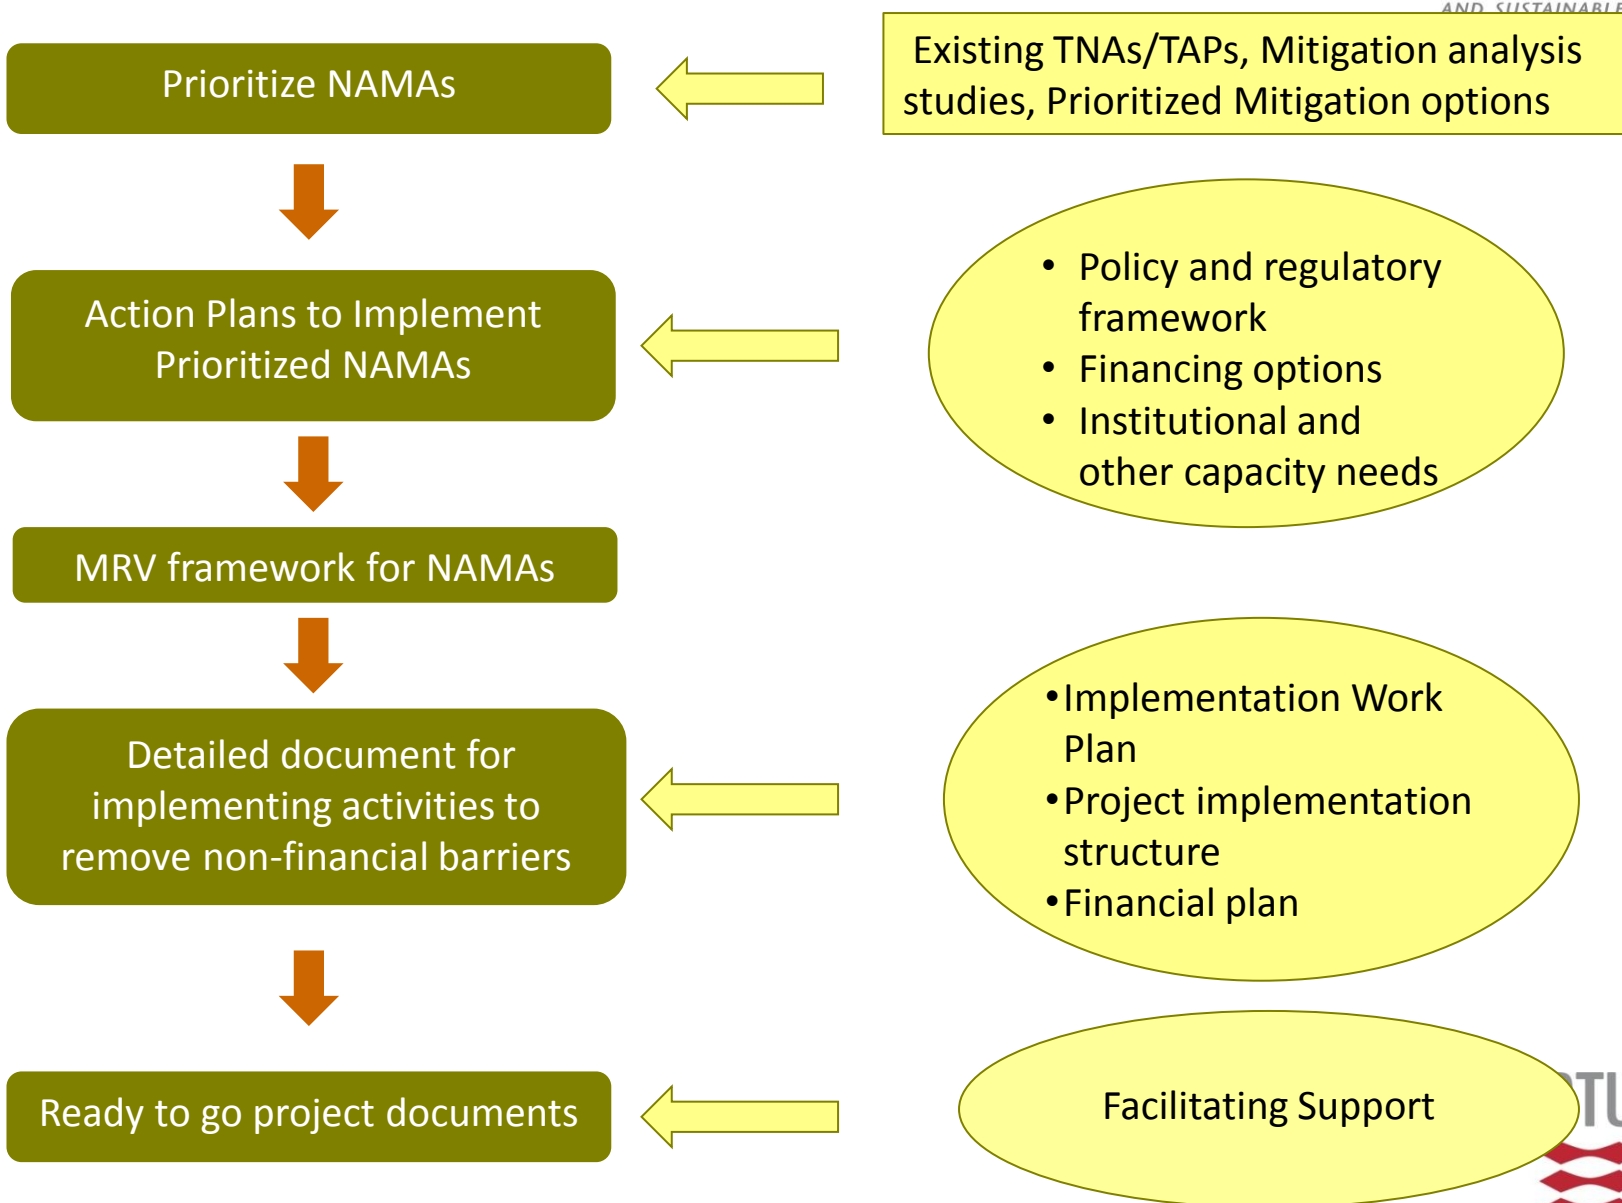

(Sharma, S, 2012)

LCDS Framework using TNA Outputs

TNA outputs are in blue whereas additional elements / methodologies which are required for NAMAs and LCDS are shown in pink

PRIORITISING NAMAS AND DEVELOPING IMPLEMENTATION PLANS

Source : FIRM project, URC

Conclusions

- Actions identified within TNA /TAP are first set of actions that can be taken for implementation as NAMAs
- Additional set of actions can be obtained from LCDS frameworks
- These mitigation actions need to be upgraded to NAMA by enumerating mitigation impacts explicitly
- Frameworks for MRV are required as these actions are to be reported under the convention
