## INTRODUCTION

### Objectives and Procedures

Sunflower performance tests were conducted in 2007 by the Kansas Agricultural Experiment Station to provide farmers, extension workers, and private industry with unbiased agronomic information on many of the sunflower hybrids marketed in the state. Tests were financed in part by entry fees from private companies. Companies known to be developing and marketing sunflowers were invited to participate and enter hybrids on a voluntary fee-entry basis. As a result, not all hybrids grown in the state were included in tests, and hybrids were not grown uniformly at all locations.

Test locations in 2007 were Thomas County – on fallow; Thomas and Greeley Counties – irrigated; and Ellis, Greeley, and Hutchinson Counties – dryland. Oilseed entries were grown at all locations. Confectionary entries were evaluated in Thomas County – irrigated, and Greeley County – irrigated and dryland. The confectionary test at Thomas County dryland was abandoned due to very poor stands. Oilseed and confectionary entries were planted separately in all tests. Entries were planted in four-row, replicated plots at all locations. To ensure uniform and adequate stands, all tests except those in Thomas County were planted at a high seeding rate and were hand thinned after emergence to desired stands. Tests in Thomas were planted to stand with a modified Monosem Vacuum Planter.

Environmental factors affecting test results and cultural practices are discussed individually for each of the test sites. Test results for 2007 and period-of-years average data are included in Tables 1 through 9. Entrants and entries in 2006 tests are listed in Table 10.

### Data Interpretation

**Yields** are reported as lbs seed/acre adjusted to 10% moisture content.

**Days to half bloom** is number of days from date of planting to date when 50% of plants were in bloom.

**Lodging percentage** is based on counts of lodged and total plants in harvested areas at all locations.

**Oil percentage** was obtained from samples submitted under code number to the Kansas Grain Inspection Service for analysis and is reported on a 10% moisture basis. Samples for all tests were derived by compositing replications by entry for each location and subsampling.

**Oil yields** are reported as net lbs oil/a.

**Seed-size percentage analysis** for confectionary-type entries was performed at the Northwest Research-Extension Center on cleaned samples submitted from each of the tests. Separation by seed size was made by screening a weighed sample through a series of six sieves (22/64, 21/64, 20/64, 19/64, 18/64, and 16/64-round holes) secured on a Ro-Tap mechanical shaker.

**Statistical analysis:** Conducting perfect tests is virtually impossible because soil fertility, moisture, and other environmental factors vary. Therefore, small differences in results might have no real meaning. To help interpret data, we applied a statistical technique, analysis of variance, wherever possible. Such analysis requires repeating whole sets of varieties or treatments several times and placing individual varieties or treatments as they would be placed by chance alone. Results of the analyses are reported in terms of least significant differences (LSD). If two means differ by more than the LSD (.05), such a difference would be due to chance variation only 5% of the time. So, it's 95% probable that the difference was due to treatment. If means do not differ by as much as the LSD, then little confidence can be placed in the importance of varietal or treatment differences. The coefficient of variability (CV) represents an estimate of the precision of replicated yield trials. Trials with a CV ranging from 10 to 15% are usually acceptable for performance comparisons. Trials with a CV greater than 15% provide only a rough guide to hybrid performance.

## ACKNOWLEDGEMENTS

Cooperation of research center personnel who performed many of the field operations is sincerely appreciated. Vicki Brown, secretary, and Jane Lingenfelser, coordinator – Kansas Crop Performance Tests, assisted in preparing this report, and temporary workers Trenton Powell and Katie Friesen helped with seed counting, plot thinning, and maintenance. Mary Knapp at the Weather Data Library provided climatological data, and James R. Cochrane, Assistant Scientist, posted data to the Kansas Crop Performance Test Web site.

# NORTHWEST KANSAS OILSEED SUNFLOWER TESTS

Northwest Research-Extension Center, Colby; Patrick Evans, agronomist

Keith silt loam; corn in 2006

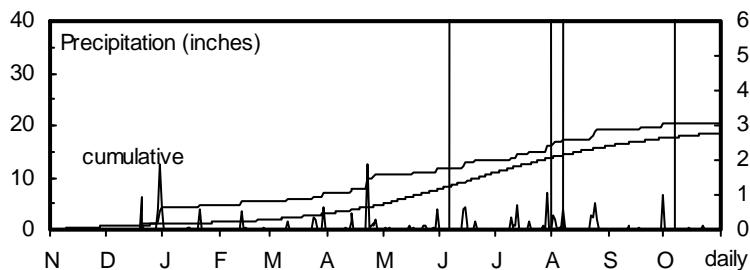

60 - 30 - 0 lb/a N, P, K

Planted on 6/7/2007; Harvested on 10/6/2007

Target stand of 23,000 plants/acre; 9.1 in. spacing

Normal growing conditions throughout the growing season. Stalk rot and stem weevil caused some lodging.

## NORTHWEST KANSAS FALLOW OILSEED SUNFLOWER TESTS

Northwest Research-Extension Center, Colby; Patrick Evans, agronomist  
 Keith silt loam; Fallow in 2006; Target stand of 17,000 plants/acre  
 Planted on 6/7/2007; Harvested on 9/27/2007; 40 - 15 - 0 lb/a N, P, K

Normal growing conditions throughout the growing season. Hot, dry conditions during flowering might have affected yields. Stem weevils and stalk rot contributed to the lodging.

**Table 2. Colby Fallow Oilseed Sunflower Performance Test, 2007.**

# WEST CENTRAL KANSAS OILSEED SUNFLOWER TESTS

Southwest Research-Extension Center, Tribune; Alan Schlegel, agronomist

Richfield silt loam; Wheat in 2006

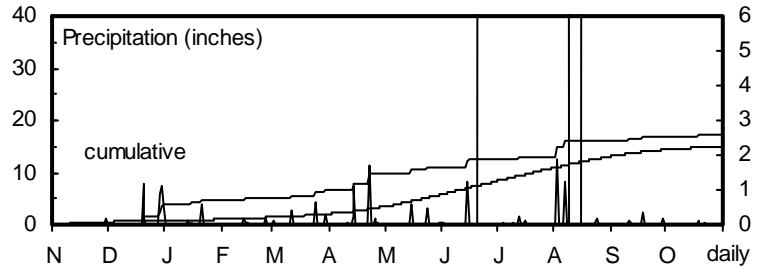

100 - 31 - 0 lb/a N, P, K

Planted on 6/21/2007; Harvested on 11/2/2007

Target stand of 17,400 plants/acre; 12.0 in. spacing

Drier than normal at planting. Test was replanted due to poor stands. Stem borer caused considerable lodging.

# NORTH CENTRAL KANSAS DRYLAND OILSEED SUNFLOWER TEST

Agricultural Research Center, Hays; Ken Kofoid, agronomist

Harney silt loam; Fallow in 2006

60 - 0 - 0 lb/a N, P, K

Planted on 6/8/2007; Harvested on 10/16/2007

Target stand of 17,400 plants/acre; 12.0 in. spacing

Growth conditions were good all summer. Lodging became evident with the onset of hot, dry weather in August.

## NORTHWEST KANSAS CONFECTIONARY SUNFLOWER TESTS

Northwest Research-Extension Center, Colby; Patrick Evans, agronomist

Keith silt loam; corn in 2006; Target stand of 17,000 plants/acre

Planted on 6/7/2007; Harvested on 10/7/2006; 60 - 30 - 0 lb/a N, P, K

Normal growing conditions throughout the growing season. Stalk rot and stem weevil caused some lodging.

## WEST CENTRAL KANSAS CONFECTIONARY SUNFLOWER TESTS

Southwest Research-Extension Center, Tribune; Alan Schlegel, agronomist

Richfield silt loam; Wheat in 2006; Target stand of 17,400 plants/acre

Planted on 6/21/2007; Harvested on 11/2/2007; 100 - 31 - 0 lb/a N, P, K

Drier than normal at planting. Test was replanted due to poor stands. Stem borer caused considerable lodging

Excerpts from the  
University Research Policy Agreement with Cooperating Seed Companies

Permission is hereby given to Kansas State University to test varieties and/or hybrids designated on the attached entry forms in the manner indicated in the test announcements. I certify that seed submitted for testing is a true sample of the seed being offered for sale.

I understand that all results from Kansas Crop Performance Tests belong to the University and the public and shall be controlled by the University so as to produce the greatest benefit to the public. Performance data may be used in the following ways: 1) Tables may be reproduced in their entirety provided the source is referenced and data are not manipulated or reinterpreted; 2) Advertising statements by an individual company about the performance of its entries may be made as long as they are accurate statements about the data as published, with no reference to other companies' names or cultivars. In both cases, the following must be included with the reprint or ad citing the appropriate publication number and title: "See the official Kansas State University Agricultural Experiment Station and Cooperative Extension Service Report of Progress 989 '2007 Kansas Performance Tests with Sunflower Hybrids,' or the Kansas Crop Performance Test Web site, <http://kscroptests.agron.ksu.edu>, for details. Endorsement or recommendation by Kansas State University is not implied."
