1988 OREGON VINEYARD REPORT

ISSUED
BY OREGON
AGRICULTURAL
STATISTICS SERVICE
PORTLAND, OR 97204

April 12, 1989

OREGON WINE GRAPE ACREAGE UP - PRODUCTION DOWN

Harvested acreage of Oregon wine grapes increased 13 percent to 3,413 acres in 1988 but yield per acre, at 2.26 tons, was 13 percent below a year earlier. The net result was a total production of 7,719 tons, off 2 percent from the 1987 crop. Most areas of the state reported lower yields due to adverse weather conditions and disease problems. However, the Rogue Valley and Columbia River areas posted overall yield increases of 5 and 93 percent respectively.

The number of Oregon vineyards increased from 263 in 1987 to 299 operations in 1988. Total acreage climbed 10 percent to 4,871 acres for the State, in 1988.

The highest yielding variety was Chenin Blanc posting a yield of 4.42 tons per acre. Morrow County had the highest locality average yield at 3.17 tons per acre.

Tons produced were dominated by three major varieties; Pinot Noir - 2,090 tons (27 percent of the total), White Riesling - 1,903 tons (25 percent) and Chardonnay - 1,729 tons (22 percent).

Average prices rose 5 percent for the 1988 crop reaching \$611 per ton. The high value leaders were Pinot Gris - \$793 per ton, Pinot Noir - \$777 per ton, and Chardonnay - \$738 per ton. Many varieties increased in price over 1987 but also quite a number showed a decline. The overall price

increase did lead to an increase of 3 percent in value of production for the 1988 crop which totaled 4.7 million dollars.

The destination of the wine grape production was as follows for 1988: 4,228 tons delivered to other Oregon wineries, 2,140 tons for estate wineries and home use, 831 tons to Washington, 405 tons to California, 72 tons to New York, and 43 tons to other states and foreign countries.

The Oregon Agricultural Statistics Service, in cooperation with the Oregon Wine Advisory Board, the Oregon Winegrowers Association and the Oregon State Department of Agriculture, conducted this annual survey of the state's wine grape industry. The survey encompassed a complete inventory of the vineyard plantings in Oregon and a separately published summary of the 1988 crop winery production.

As the Oregon wine industry grows, it is increasingly important to assess resources and needs. The published data is very useful to all segments of the wine industry - growers, vintners, manufacturing suppliers, retail outlets and exporters. The survey serves as a source of data for decision making within the industry. The published data provides a view of future production potential, helps growers develop planting plans and aids the industry in research, marketing and promotion efforts.
