Oregon wine grape production rose 33 percent in 2011 to a record high 41,500 tons. Although planted acres dipped 100 acres, fewer acres were left unharvested in 2011. Yields increased 28 percent to an average 2.37 tons from 17,500 harvested acres.

Growers reported many challenges this season, including powdery mildew, botrytis bunch rot, deer and birds. Most disrupting of all was the weather. Spring came late and summer never heated up. Sugar levels developed slowly, but heavy pruning and favorable fall weather led to a quality crop. Many growers harvested later than ever before, risking late-season disease and animal exposure, although birds were less prevalent than in 2010. The consensus was that 2011 will be a memorable vintage.

Wine grapes: Acreage, yield, production, price and value, by variety, Oregon, 2010-2011

Variety	All planted acreage		Harvested acreage		Yield per harvested acre		Production		Price per ton ¹		Value of production	
	2010	2011	2010	2011	2010	2011	2010	2011	2010	2011	2010	2011

Total ²	20,500	20,400	16,900	17,500	1.85	2.37	31,200	41,500	2,030	1,950	³ 63,336	³ 81,755

¹ Price per ton is a weighted average of prices received by Oregon grape growers.

² Totals may not add due to rounding.

³ Value of production is derived by multiplying quantity times price, rather than the summation of value by variety.

Wine grapes: Vineyards, acreage, yield and production, by growing area, Oregon, 2010-2011

Growing area ¹	Number of vineyards		All planted acreage		Harvested acreage		Yield per harvested acre		Production
