Univesity Hospital "Sveti Duh", Zagreb, Croatia*

U broju *Kardio lista* za prosinac 2010. godine objavljen je u rubrici "Ostalo" rad pod naslovom "Pet godina rada Laboratorija za kateterizaciju srca i invazivnu kardiologiju Kliničkog bolničkog centra Osijek" autorice dr. Sandre Makarović<sup>1</sup>, u kojemu je između ostaloga spomenuto i osnivanje Laboratorija godine 2005. god., a sada su podijeljene zahvalnice kolegama "koji su prepoznali potrebu za otvaranjem kateterizacijskog laboratorija te nam pomogli u njegovom nastajanju i radu. Time se neizmerno puno učinilo za pacijente iz područja cijele Slavonije i Baranje..."

Čitajući članak, kao bivši v. d. Zamjenik ravnatelja i Ravnatelj Kliničke bolnice Osijek iskre sjećanja upravo na to vrijeme inicijacije, stvaranja elaborata, opstrukcije nekih "zaslužnika" koji su na razne načine spriječavali otvaranje ovog vitalnog centra za dijagnostiku i liječenje kardiovaskularnih bolesnika davajući svakojaku pripomoć u naknama otvaranja takvih centara daleko od Osijeka. Na svakom koraku opstruirala se prenamjena prostora, kupnja aparature, edukacija liječnika i medicinskih sestara...

Stoga bih molio u duhu kolegijalnosti i (sada već) mediokohistoriografske istine, da objavite ovaj članak kako bi se ispravila nenamjerna nepravda. Čitav projekt počeo je 2003. godine, a realiziran 2005. godine, kada je Laboratorij otvoren. Ne smijemo dopustiti relikvije nekih prošlih vremena u kojima su paradoksalne nezasluzene lovorike brali drugi, a oni koji su ostvarili projekt nisu niti spomenuti.

Naime, nakon odbijanja zahtjeva 2002. godine, tijekom 2003. na inicijativu tadašnje predstojnice Interne klinike i šefa Kardiovaskularnog odjela klinike prof. dr. sc. Katje Čatipović Veselica i Udruge kardiovaskularnih bolesnika sačinjen je elaborat i pokrenut zahtjev prema Ravnateljstvu bolnice o potrebitosti osnivanja kateterizacijskog laboratorija kao vitalnoga projekta. Tadašnje Ravnateljstvo shvatilo je i prihvatilo ovu inicijativu te je stvoren tim Ravnateljstva, predstojnika Interne i Kirurške klinike te Odjela za anesteziologiju i Odjela za radiologiju tadašnje Kliničke bolnice Osijek koji će delegirati liječnike, medicinske sestre i tehničare za edukaciju. U međuvremenu potpisan je ugovor o suradnji između Kliničkog bolničkog centra Zagreb i Kliničke bolnice Osijek, pa su tako poslana prva dva kardiologa, jedan kirurg, pa kasnije još dva završena kirurga na subspecializaciju iz kardijalne kirurgije, dva anesteziologa te medicinski tehničari, medicinske sestre, instrumentarke, anesteziološki tehničari, inženjeri radiologije koji su odlazili na edukaciju u Zagreb. Zapošljava se kardiokirurg s iskustvom i ustrojava kardiokirurška jedini-

An article entitled "Five-Year Work of the Laboratory for the Catheterization of Heart and Invasive Cardiology of the Clinical Hospital Centre Osijek", by author Dr. Sandra Makarović<sup>1</sup>, was published in the issue of *Kardio list* in December 2010 in the column "Other". The article mentions the establishment of the Laboratory in 2005 and now the certificates of gratitude have been distributed among the colleagues who have recognized the need for opening catheterization laboratory helping us in its establishment and work. This is how a lot has been done for the patients from the region of Slavonia and Baranja...

Reading the article as a former Deputy Principal and Principal of the Osijek Clinical Hospital, I remember the time of initiation, preparation of the study, obstruction by some "meritorious persons" who in various ways tried to prevent opening of this vital center for diagnostics and treatment of cardiovascular patients giving different kinds of help in opening such centers far away from Osijek. At every step they obstructed the refurbishment of premises, purchase of devices, training of physicians and nurses...

Therefore, I would like to ask you in the name of collegiality and for the sake of historic truth to publish this article as to make accidentally caused injustice right. The project started in 2003 and was implemented in 2005 when the Laboratory was opened. We should not allow any heritage of past times occur when paradoxical non-deserved recognitions and credits were taken by others, and those who implemented the project were not even mentioned.

After the request in 2002 was rejected, during 2003 on request by the former principal of the Internal Medicine Clinic and Chief of Cardiovascular Department of the Clinic, Prof. Katja Čatipović Veselica, PhD and Association of Cardiovascular Patients, a study was prepared and the request was submitted to the Hospital Directorate of necessity of establishment of catheterization laboratory as a vital project. The former Directorate understood and accepted this initiative and formed a Directorate team, team of Principles of Internal Medicine and Surgical Clinic, Department for Anesthesiology and the Radiology Department of the Osijek Clinical Hospital that delegated physicians and nurses for training. In the meantime, an agreement of cooperation between the Clinical Hospital Centre Zagreb and Osijek Clinical Hospital was concluded, so two cardiologists were sent, one surgeon and later two educated surgeons were sent for subspecialization in cardiac surgery, two anesthesiologists and nurses, instrument nurses, anesthesiologist nurses, radiology engineers who went to Zagreb for the purpose of receiving training. An experienced

ca, pa odjel. Tehnička služba bolnice napravila je projekte po standardima, nabavljena oprema i svi su uvjeti za otvaranje Laboratorija i Kardiokirurgije u Osijeku bili zadovoljeni.

I kao i uvijek, usprkos nedaćama koje pamtim i ne treba ih spominjati, volja i entuzijazam spomenutih zdravstvenih djelatnika pokazao je ponovno svoj temeljni zadatak koji se dugoročno i trajno pokazao uspješnim projektom na korist brojnim kardiovaskularnim bolesnicima.

Poštovanoj kolegici autorici članka i svim osječkim kardiolozima želim uspješan rad temeljen na zajedničkom trudu. Detaljna dokumentacija o tijeku čitavoga projekta 2002.-2004. godine može se dobiti na uvid.

### Literature

1. Makarović S. Pet godina rada Laboratorija za kateterizaciju srca i invazivnu kardiologiju Kliničkog bolničkog centra Osijek. *Kardio list*. 2010;5(12):318-9.

cardiac surgeon was employed, followed by establishment of cardiosurgery unit and later department. The Hospital technical department designed the project according to standards, equipment was purchased and all preconditions for opening of the Laboratory and Cardiosurgery in Osijek were fulfilled.

As always, despite difficulties we remember, which should not be mentioned, the willingness and enthusiasm of the above mentioned medical staff again stressed its basic task that proved to be successful in the long run and permanently to the benefit of numerous cardiovascular patients.

I wish a successful work to the respectful author of the article and all Osijek cardiologists based on the common efforts. Detailed documentation on the progress of the entire project from 2002 to 2004 may be given if you wish to get an insight into it.
