- **Central services used by libraries**
 - Database with web-interface for the administration of orders and generation of eBooks
 - Automation of communication (automated e-mails to customers, tracking page with status update)
 - Central provision of OCR (optical character recognition) services: antiqua and gothic font
 - Central management of credit card payments
- **Carried out locally at library sites**
 - Scanning of material
 - Administration of orders
 - Local payment methods (invoice, cash)
 - Upload to local digital repositories
 - Long time storage

Digitised card catalogue

- Analysis of 500 books requested for digitization, period 2006-2010
- **Books published before 1900**
 - 195 books requested
 - Rights clearance: presumably public domain without any further research

- **Books published 1901-1939**

- 135 books were requested for this period
- Successfully cleared works:
25% public domain after search in authority files (VIAF & GND)
- presumably a higher number would be public domain, but is unverifiable

■ **Books published 1940-1988**

- 172 books requested
- Successfully cleared works:
for about 20% contact details of rightholders or heirs could be found & permission for digitisation and delivery of digital is given
- Enormous amount of time and effort
 - about min. 15 min. search in clearly defined databases (e.g. VIAF, PND, WBIS, AEIOU, Tirol Lexikon) up to 4h net time if contacting possible rightholders / heirs is needed
 - plus time for appropriate documentation
 - average throughput time was 1-3 months for positive answers

- requests from researchers, students, family historians,...
- „pleaaase, I need this urgently...“ „for my research, for my study, for my personal use,...”
- out of print books

- How big is the desert now?

[source: <http://www.flickr.com/photos/timetrax/376152628/>]

Books	In German	Europewide
Total number of unique books 1800-2000	6,5 mio	22-24 mio
Public domain	1,5 mio	4 mio
In copyright	5 mio	18-20 mio
In print (2007)	1 mio from 16.000 publishers	

- „Grey literature“:
 - print material outside of publishing companies (Official printed papers, company documents, conference proceedings, reports, university publications,...)
 - 30-50% for 20th century

- Newspapers – Germany:
 - 19th century: 4-5.000 titles
 - 20th century: 8-10.000 titles
 - Currently: ~150 daily newspapers

- How to make the desert bloom?
 - Contracts with publishers
 - but when there is no publisher? (thesis,...)
 - ceased publishers?
 - publishers point to authors...
 - Prepare for implementation of orphan work directive
 - proposal: modify EOD button in catalogue up to publishing year 1960s, 1970s, 1980s,... taking into account authority files

- Any other ideas?

Will our digital libraries look like this

or like this?

Thank you for your attention!
