Agroforestry in Europe: Practice, Research and Policy

Content

1. The **practice** of agroforestry in Europe
2. Some **research** from the AGFORWARD project
3. Some important **policy** issues

The Practice of Agroforestry

Reclaimed arable land on the Vallevicchia farm in the Veneto region of Italy is flat, open, and exposed with few trees

The Practice of Agroforestry

A landscape photograph showing a green field with a row of trees in the distance under a cloudy sky. The trees are mostly bare, suggesting a late autumn or winter setting. The sky is overcast with soft, grey clouds.

The landowner explained that they are practising agroforestry by planting tree rows on every third drainage ditch, e.g. every 90 m

Integrating commercial production of organic oats with organic apples in Eastern England with 27 m alleys

Farming in the Pontben catchment in Wales

Sheep and wild cherry trees in Galicia

Chicken amongst trees in the UK

Montado and cattle in Portugal

Agroforestry:

the deliberate integration of woody vegetation with pasture (consumed by animals) or an agricultural crop

The woody species can be **evenly or unevenly** distributed or occur on the border of plots.

Agroforestry types

Silvopastoral

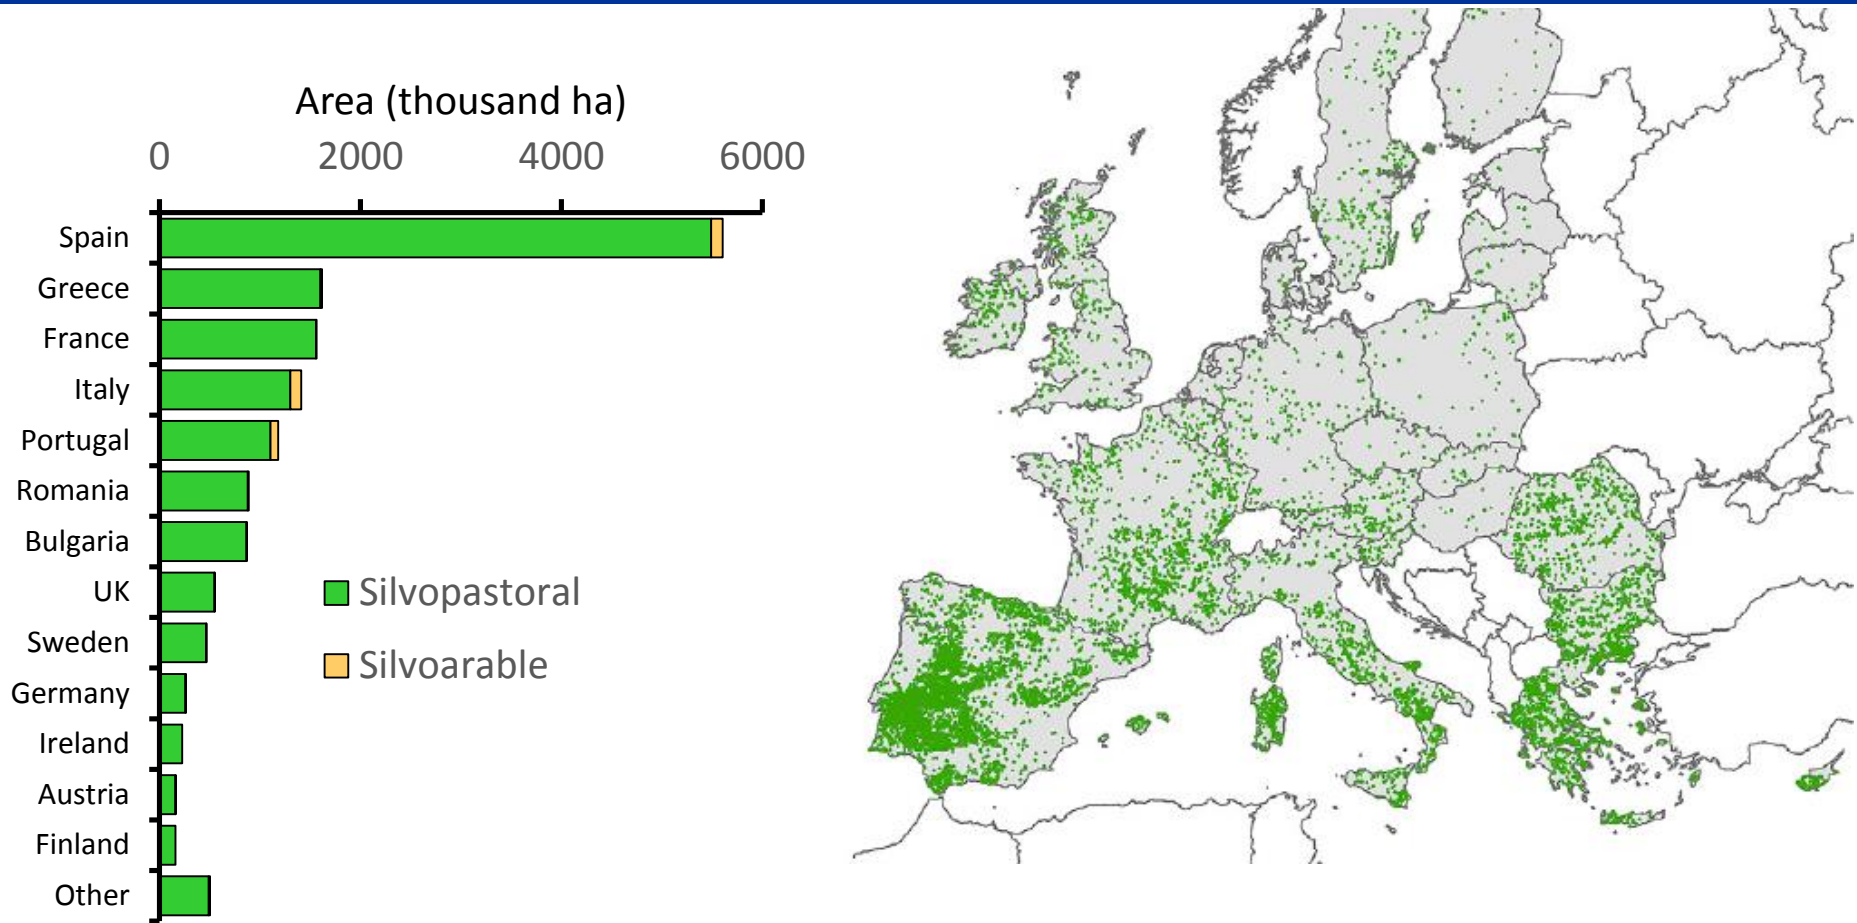

Silvoarable

Combining trees and shrubs with forage and animal production

Widely spaced trees and shrubs inter-cropped with annual or perennial crops

Extent of agroforestry in Europe

Area of agroforestry: Using LUCAS data: 15.4 Mha (3.6% of total area and 8.8% of agricultural area) (den Herder et al. 2017) (excludes 1.8 Mha of homegardens).

Five agroforestry types

Silvopastoral	Silvoarable	Hedgerows, windbreaks and riparian buffer strips	Forest farming	Home- gardens
				
<p>Combining trees and shrubs with forage and animal production</p>	<p>Widely spaced trees and shrubs inter-cropped with annual or perennial crops</p>	<p>Lines of trees/shrubs bordering farmland to protect livestock, crops, and/or soil and water quality</p>	<p>Forested areas used for harvest of speciality crops</p>	<p>Trees/shrubs with veg. in urban areas (1.8 Mha)</p>

Ten Farmer networks: high nature and cultural value agroforestry

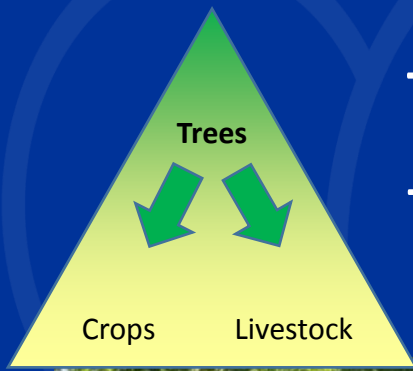

Use of GPS and adapted forest management with reindeer in Sweden

Effect of tree density on livestock carrying capacity in Iberian wood pastures

Ten farmer networks: agroforestry for tree systems like walnut and apples

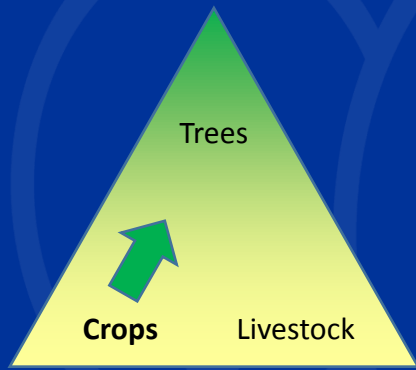

Beneath walnut trees in Spain, grazing with sheep (relative to mowing) and intercropping legumes (relative to unfertilised grass) increased carbon storage and tree diameter growth

Sheep in cider apple orchards in the UK and France can reduce mowing costs

Eleven farmer networks: agroforestry for arable systems

Benefits of fescues & legumes, wild flowers and mulches in tree rows

Shelter benefits on crop yields in Germany

Nine farmer networks: agroforestry for livestock systems

Tree fodder with dairy cows in France

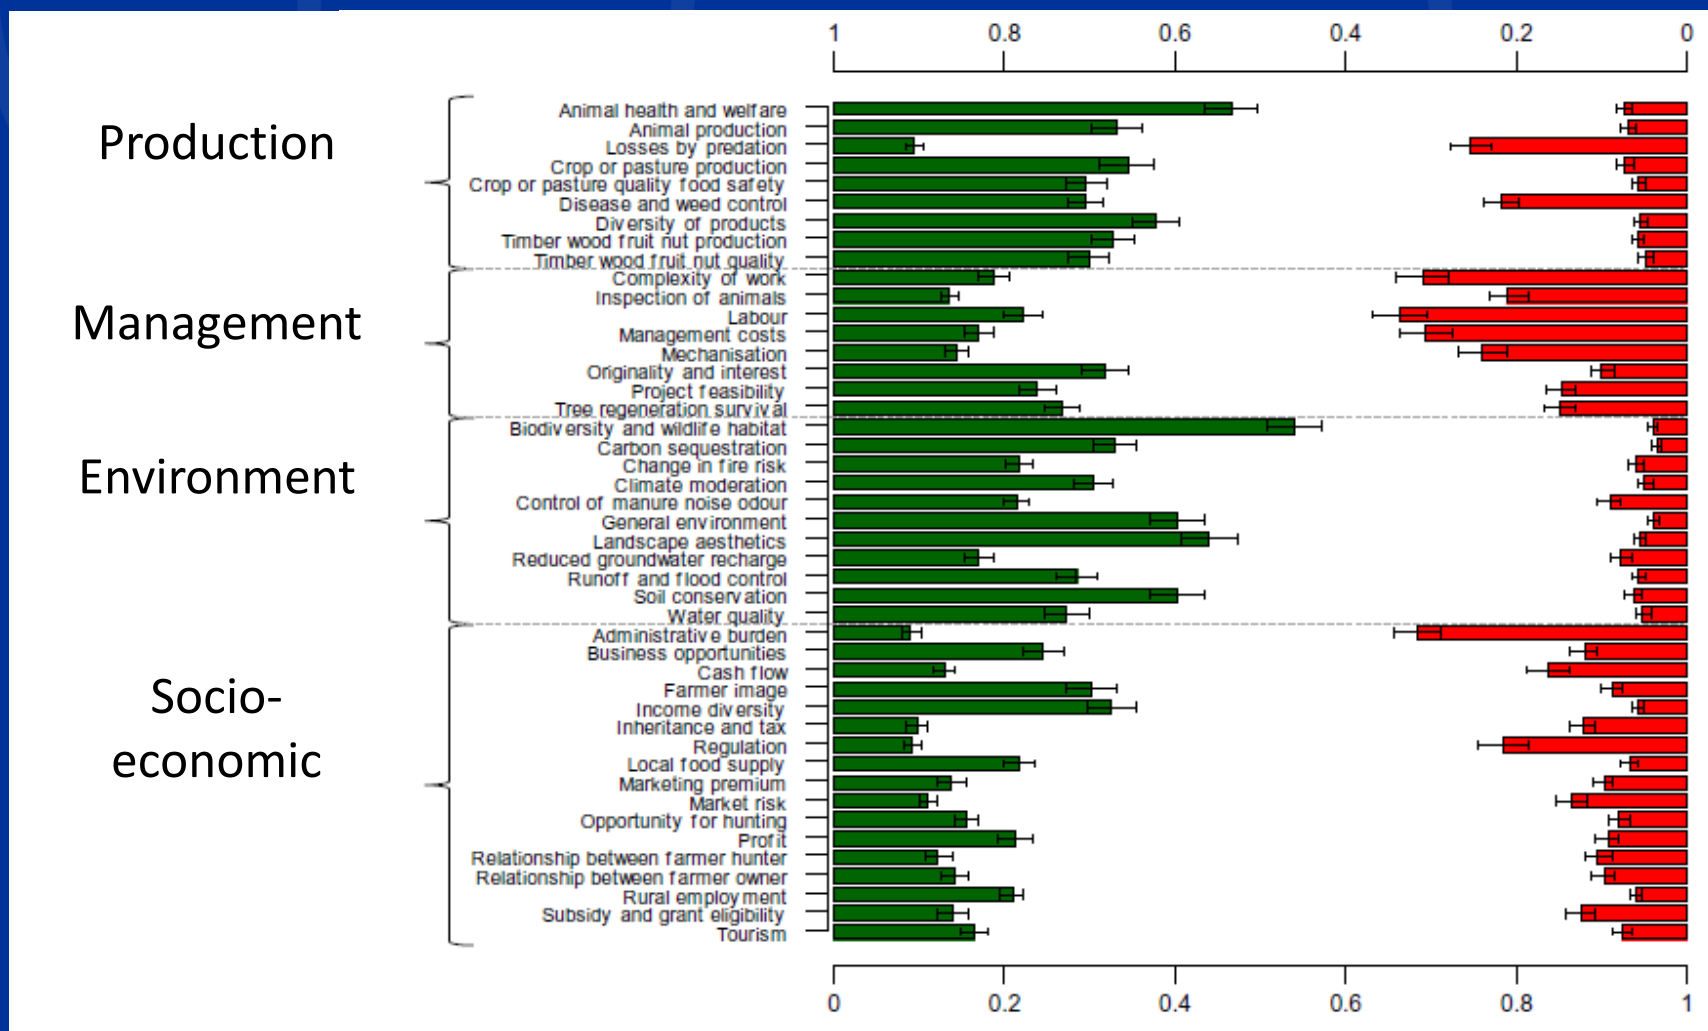

- Establishment of a tree fodder database describing its nutrients for livestock
- Crude protein can reach 220 g/kg in black locust, chestnut, white mulberry, and ash. White mulberry and ash, which also have high digestibility, could be included in cattle diets (Emile et al. 2017)

Nine farmer networks: agroforestry for livestock systems

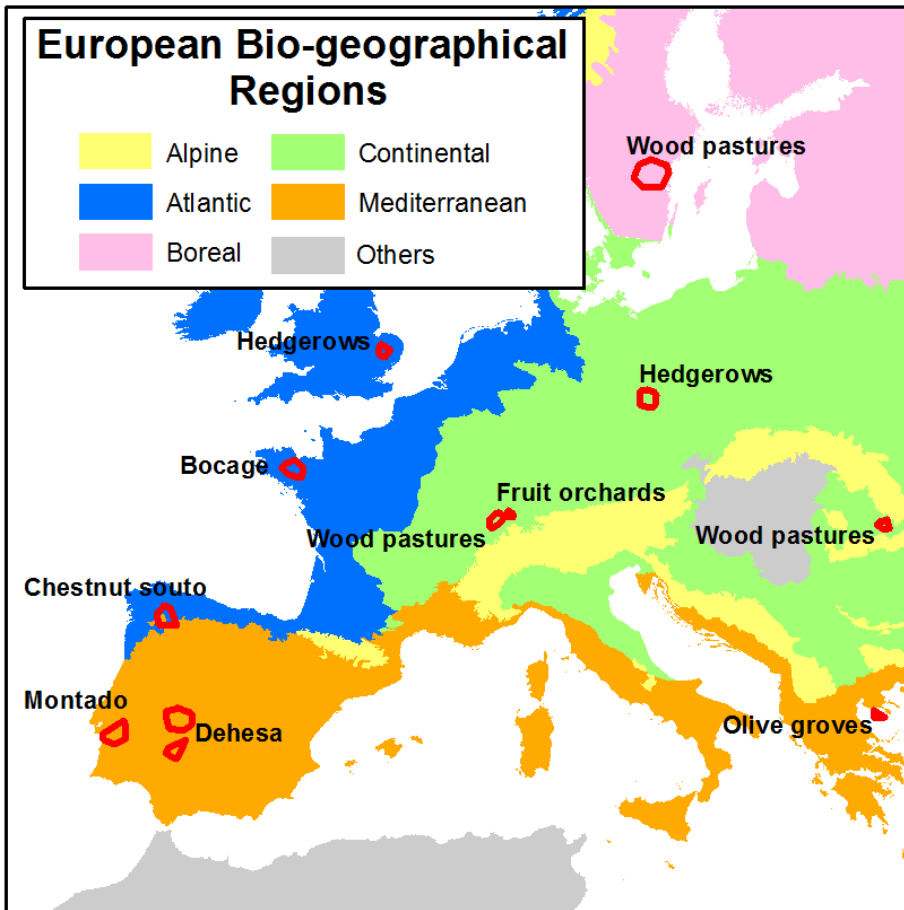

Tree cover makes chickens use their range area more evenly, with more even distribution of mature. Less feather pecking damage is seen. Less waterfowl are seen in the free-range area which can be a risk for transmitting avian flu

Farmer's opinions of the positives and negatives

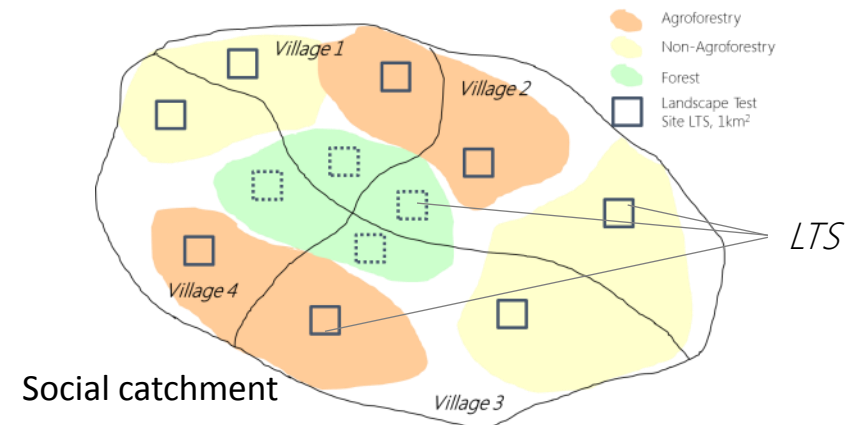

Positive and negative perceptions of agroforestry (Garcia de Jalon et al. 2017) based on 30 stakeholder groups (comprising 344 stakeholders) on the positive (green bars on the left, bottom axis) and negative issues (red bars on the right, top axis) related to selected agroforestry systems across Europe.

Modelling the impact of landscape agroforestry in twelve European regions

Twelve case study regions in Europe

- Atlantic (3)
- Mediterranean (4)
- Continental (4)
- Boreal (19)

- **Landscape Test Sites (LTS), 8-12 x 1 km²**
 - Habitat mapping
 - Modelling biophysical benefits
- **Social catchment, 50–200 km², 5–6 municipalities**
 - Public Participation Geographic Information System (PPGIS)
 - Deriving socio-cultural benefits

Does European agroforestry provide biodiversity and biophysical benefits?

Fruit Orchards, Central Europe

AF - LTS

NAF - LTS

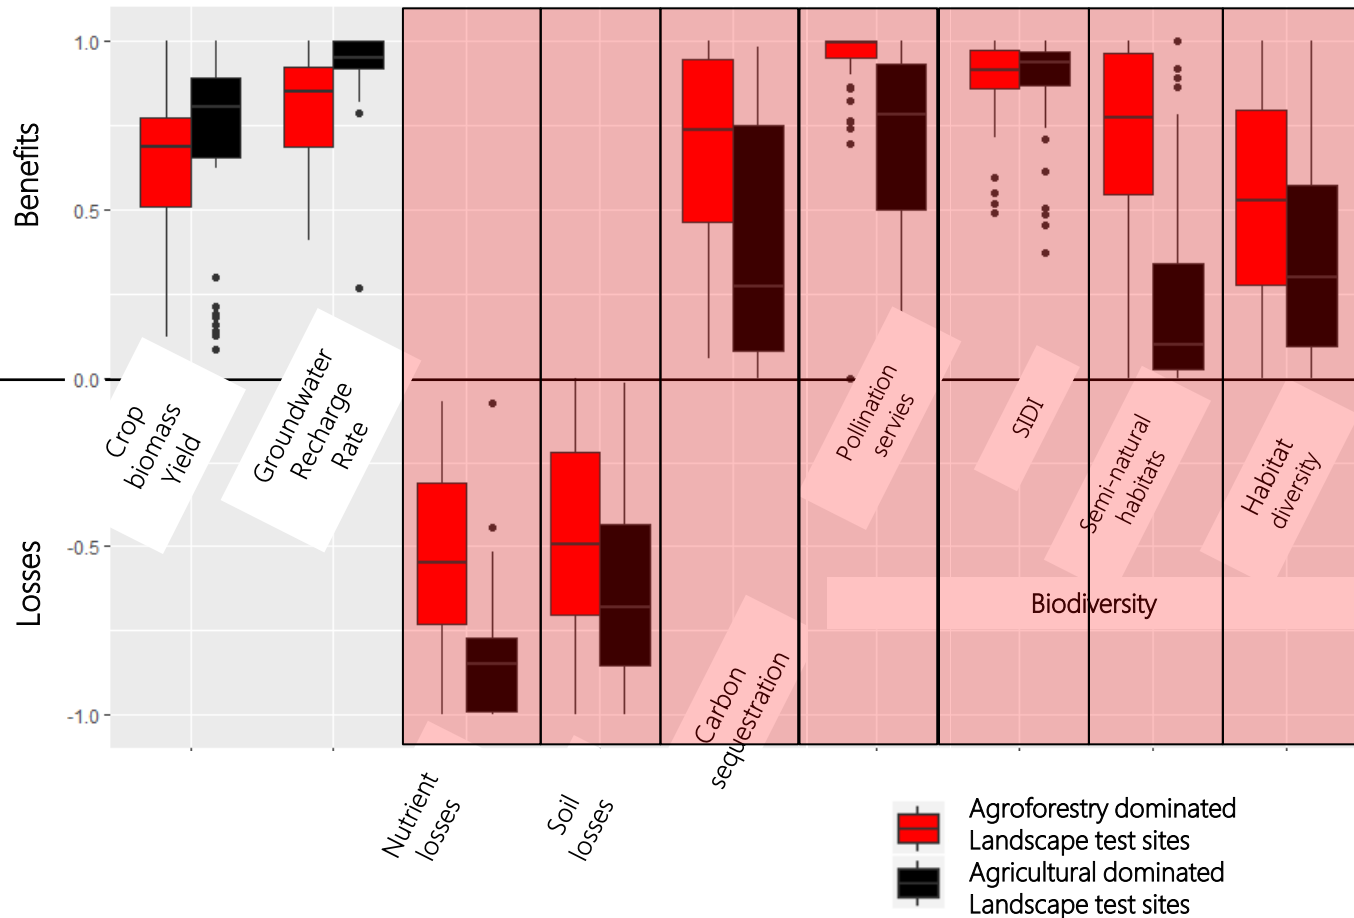

Modelled Ecosystem Services

- Biomass yield
- Groundwater recharge rate
- Nutrient retention
- Soil preservation
- Carbon sequestration
- Biodiversity
 - Functional biodiversity (Pollination)
 - Habitat diversity

Yes!- Agroforestry enhances biodiversity and biophysical ecosystem services

Agroforestry dominated landscapes

- better nutrient retention
- higher carbon sequestration
- higher soil preservation
- higher pollination services
- higher proportions of semi-natural habitats

Agricultural dominated landscapes

- higher annual crop biomass yields
- higher groundwater recharge rates

AGFORWARD (Grant Agreement N° 613520) is co-funded by the European Commission, Directorate General for Research and Innovation, within the 7th Framework Programme of RTD. The views and opinions expressed in this report are purely those of the writers and may not in any circumstances be regarded as stating an official position of the European Commission.

Designating between agroforestry on agricultural land and on forest land

Agroforestry on agricultural land			Agroforestry on forest land		Urban areas
Silvopasture	Hedgerows, windbreaks and riparian buffer strips	Silvoarable	Silvopasture	Forest farming	Home gardens
					
Wood pasture Meadow orchards Grazed orchards		Alley cropping	Forest grazing		Allotments, Gardens

(Mosquera-Losada et al. 2017)

Farmers want to ensure that maintain Pillar I payments in the Common Agricultural Policy

CAP	Agricultural land	Forest land	Urban area
Pillar I – direct payments	Payments for farmers who maintain land in good agricultural and environmental condition	No payment	No payment
Pillar II – Rural Development	Up to 27 measures that can support agroforestry including one “agroforestry” measure		

Some summaries of policy recommendations

Recommendation 5

In Pillar I, because of the environmental and societal benefits of trees on farms, agroforestry on arable and pasture land should be fully eligible for direct payments

Some summaries of policy recommendations

- 9.** In Pillar II, the current 27 measures linked to agroforestry should be grouped together in one place
- 11.** Given the increasing risk of forest fires, there should be support for silvopasture (forest grazing), within the agroforestry measure
- 12** Result-based payments can be delivered if agroforestry is implemented at a farm-scale

Summary: Agroforestry in Europe: Practice, Research and Policy

1. The practice of agroforestry in Europe is more important than you think
2. Farmers recognise the animal welfare, soil conservation, carbon, and biodiversity benefits, and administration as a constraint
3. There are policies that can be implemented to support joined-up effective land-use use
