

SEMINAR SERIES

Blood-based marker for aggressive breast cancer early detection

Srinidi Mohan, Ph.d., M.Sc.

Assistant Professor, Department of Pharmaceutical Sciences, College of Pharmacy University of New England

Srinidi Mohan, Ph.D., joined UNE in 2011 as an assistant professor in the UNE College of Pharmacy. He received his Doctoral degree from Mississippi State University, and received his post-doctoral training from the University at Buffalo-SUNY.

Dr. Mohan's present research focuses on nitric oxide metabolism, and its role in breast cancer biomarker development. He has been actively involving Doctor of Pharmacy students in his research projects, who have published their research work in peer-reviewed journals and/or have participated in poster presentations at regional, and national venues.
