

JRC TECHNICAL REPORTS

Potential chemical contaminants in the marine environment

*An overview of main
contaminant lists*

Victoria Tornero, Georg Hanke

2017

This publication is a Technical report by the Joint Research Centre (JRC), the European Commission's science and knowledge service. It aims to provide evidence-based scientific support to the European policymaking process. The scientific output expressed does not imply a policy position of the European Commission. Neither the European Commission nor any person acting on behalf of the Commission is responsible for the use that might be made of this publication.

Abstract

The identification of priority chemicals is a challenge for regulators, managers and researchers all around the world. This report compiles in a single list more than 2700 substances (or groups of substances) coming from main lists of chemicals compiled by relevant global conventions, European legislation, European regional seas and dedicated research work. Although not all of these contaminants are of concern for the marine environment or for a particular MSFD region/sub-region/Member State, this general overview should help understand the different options and support further developments for the monitoring and assessment of chemical pollution in European marine waters. Discussion and collaboration between the different stakeholders and expert groups will be necessary for an efficient way towards an equally high level of protection for healthy and productive oceans.

This compilation also assists in using a harmonized nomenclature for the unambiguous identification of the substances of concern. It may also serve as a basis for discussions about procedures for grouping/combining substances at European level. This is expected to facilitate consistency in the upcoming 2018 MSFD data reporting.

1 Introduction

Chemical pollution is one of the main environmental issues in the world today. Over 131 million registered chemical substances appear in the Chemical Abstracts Service Registry File. 387,150 of them are somehow regulated in the international markets (CAS, 2017). The vast number of contaminants that consequently may be present in the environment poses a great challenge for our planet. Regulators, managers and researchers all around the world have been devoted to the task of identifying the most relevant substances or groups of substances deserving particular attention. In this context, the common approach has been to develop a list of chemicals to focus on based on their potential hazard to the ecosystems and/or to human health.

Most relevant legislation currently for the protection of the European aquatic environment are the Water Framework Directive (WFD, 2000/60/EC¹) and the Marine Strategy Framework Directive (MSFD, 2008/56/EC² and amendment EU 2017/845³). The WFD establishes a list of substances of EU-wide concern (the priority substances, PS⁴) as a means to assess the chemical status of water bodies up to 12 nautical miles from the straightened coastline. This directive also requires the selection by Member States of substances of national or local concern (river basin specific pollutants, RBSP), which form part of the quality elements for "good ecological status" up to 1 nautical mile. The MSFD descriptor 8 "*Concentrations of contaminants are at levels not giving rise to pollution effects*" completes the coverage of marine waters by provisions for substance selection in the areas covered by European legislation. In accordance with the new MSFD Commission Decision on criteria and methodological standards on good environmental status (GES) (2017/848/EU⁵), EU Member States have to consider contaminants already identified as PS or RBSP under the WFD, but also other additional substances that may give rise to pollution effects.

Other legislation, including for the safeguarding of (sea)food, regulatory agencies (e.g. ECHA), regional frameworks, international conventions and dedicated research programs have also developed lists of "priority" environmental chemicals.

The aim of this report is to provide an overall picture of major available chemicals lists, with particular attention to those of specific relevance for the marine environment. This general overview should help understand the different options as well as support and facilitate further developments on the monitoring and assessment of chemical pollution in European marine waters.

2 Compilation of substances of environmental concern

2.1 Global conventions

2.1.1 The Stockholm Convention⁶

The Stockholm Convention is a global treaty to protect human health and the environment from persistent organic pollutants (POPs). POPs are chemicals that are toxic to humans and wildlife, persist in the environment for long periods, bio-accumulate in the fatty tissues of living organisms and bio-magnify through the food chain, and have the potential for long-range transport. Currently, there are 26 POPs listed in the Convention, including pesticides (e.g. aldrin, chlordcone and lindane), industrial chemicals (e.g. polychlorinated biphenyls (PCBs), perfluorooctane sulfonic acid, its salts and perfluorooctane sulfonyl fluoride) and unintentional by-products of many industrial processes, (e.g. polychlorinated dibenz-p-dioxins (PCDD) and polychlorinated dibenzofurans (PCDF)). In implementing the Convention, Governments should take measures to eliminate or reduce the release of those POPs into the environment.

Parties can also propose new POPS to be added to the list. The chemicals currently under review by the Persistent Organic Pollutants Review Committee (POPRC) are dicofol, pentadecafluorooctanoic acid (PFOA, perfluorooctanoic acid), its salts and PFOA-related compounds, and perfluorohexanoic acid (PFHxS), its salts and PFHxS-related compounds.

2.1.2 The Rotterdam Convention⁷

The Rotterdam Convention is a global treaty to promote shared responsibility for chemicals, through cooperative efforts among Parties in the international trade of certain hazardous chemicals and to contribute to the environmentally sound use of those hazardous chemicals. The Convention provides for a Prior Informed Consent (PIC) procedure for imports of chemicals that have been banned or severely restricted for health or environmental reasons by two or more Parties and are listed in its Annex III. This annex currently includes 47 chemicals (33 pesticides and 14 industrial chemicals) and 8 additional chemicals have been recommended for inclusion.

2.1.3 The Basel Convention⁸

The Basel Convention aims at protecting human health and the environment against the adverse effects of hazardous wastes. Hazardous wastes are defined as wastes that belong to any category contained in its Annex I (e.g. clinical wastes or waste pharmaceuticals), unless they do not possess any of the characteristics contained in Annex III (e.g. liable to spontaneous combustion, corrosive or ecotoxic). Two additional annexes present pre-defined lists so as to facilitate the identification of the waste types that are (Annex VIII, List A) and are not (Annex IX, List B) considered hazardous by the convention.

2.1.4 UNECE⁹ Conventions

The United Nations Economic Commission for Europe (UNECE) is one of five Regional Commissions of the United Nations and its major aim is to promote pan-European economic integration. Among a broad range of activities, UNECE works to improve environmental governance across the region and to reduce pollution and the damage it causes.

The Convention on long-range transboundary air pollution (CLRTAP)¹⁰ was signed in 1979 and entered into force in 1983 as the first regional environmental convention. The

(⁶) <http://chm.pops.int/>

(⁷) <http://www.pic.int/>

(⁸) <http://www.basel.int/>

(⁹) <https://www.unece.org/>

Convention has been extended by eight protocols focused upon setting strict reduction targets for releases of key harmful pollutants, such as persistent organic pollutants (the Aarhus Protocol on POPs, which lists 23 substances or group of substances in its Annex I)¹¹ and toxic heavy metals (the Aarhus Protocol on Heavy Metals, which focuses on cadmium, lead and mercury)¹². CLRTAP is also increasing its focus on the identification of new risks and the addition of new pollutants, including dissolved solvents, dust, and fine particulate matter.

Furthermore, the UNECE Convention on Access to Information, Public Participation in Decision-making and Access to Justice in Environmental Matters (Aarhus Convention)¹³ is a legally binding international instrument, which explicitly links environmental rights with human rights. The Convention provides for the right to access to environmental information, the right to participate in environmental decision-making, and the right to access to justice. In 2003, the Kyiv Protocol on Pollutant Release and Transfer Registers (UNECE PRTR Protocol)¹⁴ was adopted as a protocol to the Aarhus Convention. PRTRs are publicly available inventories of pollution from industrial sites and other sources, which require operators to provide up-to-date information on their release and transfer of a large number of listed pollutants (86 pollutants are currently included in the Annex II of the Protocol).

2.1.5 The International Convention for the prevention of Pollution from Ships (MARPOL)¹⁵

The MARPOL Convention is the main international convention covering the prevention of pollution of the marine environment by oil from ships, as well as pollution by chemicals, goods in packaged form, sewage, garbage and air pollution.

The regulations for the prevention of oil pollution are included in the MARPOL Annex I. The MARPOL Annex II regulates pollution by noxious liquid substances in bulk and includes around 250 substances graded into four pollution categories. The assignation to a category is based on an evaluation of the hazard they present to marine resources, human health and sea amenities (substance's ability to bioaccumulate and biodegrade, aquatic toxicity, long-term human health effects and effects on marine wildlife and on benthic habitats).

Regulations concerning chemicals transported in packaged form are provided through MARPOL Annex III. For the purpose of this Annex, "harmful substances" are those substances identified as marine pollutants in the International Maritime Dangerous Goods Code (IMDG Code)¹⁶ or which meet the criteria listed in the Appendix of Annex III. These criteria are based on the United Nations' Globally Harmonised System of Classification and Labelling of Chemicals (GHS)¹⁷ standards. The substances and mixtures are classified according to their acute and chronic toxicity to the aquatic environment, bioaccumulation and environmental degradation.

2.2 European legislations

2.2.1 WFD

As mentioned above, the WFD sets out strategies against water pollution and establishes a list of substances or groups of substances of major concern for European waters. 45

substances are currently on the list of priority substances (PS) and 8 substances are on the list of other pollutants. The Directive states that the PS list has to be reviewed every six years, comprising the assessment of existing substances as well as the identification of new potential PS. The second review is now ongoing and encompasses two approaches: the monitoring and modelling-based prioritization exercises.

The monitoring-based prioritisation exercise ranks and classifies substances with enough monitoring data (monitored at least by four countries) according to a new methodology that considers the spatial, temporal and extent of Predicted Environmental Concentration (PNEC) exceedances (STE approach) in the monitoring data (Carvalho, et al., 2016). The remaining substances with insufficient or low-quality monitoring data are evaluated in the modelling-based exercise, where every substance is categorised according to the quantity that is expected to be released into the environment (exposure score) and to its effects on organisms (hazard score) (Lettieri et al., 2016).

There is also a WFD Watch list of substances for EU-wide monitoring, which are listed in the Annex to the Commission Implementing Decision 2015/495/EU¹⁸. The mechanism is aimed at providing high-quality monitoring information on the concentrations of emerging pollutants and other substances whose available monitoring data are insufficient to identify the risk they pose at EU level. The first Watch lists includes 10 substances (or group of substances) and will be periodically reviewed to ensure that substances are not monitored longer than necessary, and that substances for which a significant risk is confirmed are, as soon as possible, identified as candidate priority substances (Carvalho et al., 2015).

Within the context of the WFD, the EU Member States have also to identify pollutants of regional or local importance and select the substances to be declared as River Basin Specific Pollutants (RBSP) for control at the relevant level. This requires assessments of impacts as well as prioritisation efforts and strategic screening for substances of potential concern (Piha et al., 2010).

2.2.2 Registration, evaluation and authorisation of chemicals (REACH)¹⁹

REACH provides legislative procedures to improve the protection of human health and the environment from risks posed by chemicals. The companies must collect information on the properties and uses of the substances they manufacture and market in the EU and identify and communicate to the European Chemicals Agency (ECHA)²⁰ the risks linked to them.

Substances that may have serious and often irreversible effects on human health and the environment can be identified as substances of very high concern (SVHCs). Under REACH, SVHC are substances classified as carcinogenic, mutagenic or toxic for reproduction (CMR) in accordance with the CLP Regulation (see below); persistent, bioaccumulative and toxic (PBT) or very persistent and very bioaccumulative (vPvB) according to REACH (Annex XIII); or with an equivalent level of concern. If a substance is identified as an SVHC, it will be added to the Candidate List for eventual inclusion in the Authorisation List.

(¹⁸) Commission Implementing Decision (EU) 2015/495 of 20 March 2015 establishing a watch list of substances for Union-wide monitoring in the field of water policy pursuant to Directive 2008/105/EC of the European Parliament and of the Council. <http://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32015D0495&from=IT>

(¹⁹) Regulation (EC) No 1907/2006 of the European parliament and of the council of 18 December 2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH), establishing a European Chemicals Agency, amending Directive 1999/45/EC and repealing Council Regulation (EEC) No 793/93 and Commission Regulation (EC) No 1488/94 as well as Council Directive 76/769/EEC and Commission Directives 91/155/EEC, 93/67/EEC, 93/105/EC and 2000/21/EC. <http://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32006R1907&from=en>

(²⁰) <https://echa.europa.eu/home>

As of August 2017, 174 substances are on the candidate list²¹. These substances are regularly assessed by ECHA to determine which ones should be included in the Authorisation List (annex XIV) as a priority. Priority is normally given to substances with PBT or vPvB properties, or with wide dispersive use, or with high volumes. Currently, there are 43 substances in REACH Annex XIV.

If the risks cannot be managed, authorities can restrict the use of substances in different ways. The substances restricted under REACH are included in Annex XVII, which in August 2017 contains 65 unique substances/entries.

2.2.3 Classification, Labelling and Packaging (CLP) Regulation²²

CLP requires that all chemicals (substances and preparations) on the market have to be classified, i.e. assessed whether or not they could damage human health or the environment. The classification is a process involving the identification of information on the physical, health, environmental or other hazards of a substance or a mixture as set out in Annex I to CLP. If the chemical is classified as hazardous, it has to be labelled and handled accordingly. CLP was implemented based on the GHS standards.

The Classification & Labelling (C&L) Inventory is a database that contains basic classification and labelling information on notified and registered substances from manufacturers and importers. It also contains the list of harmonised classifications (Annex VI). ECHA maintains the C&L Inventory, but does not review or verify the accuracy of the information. As of July 2017, 129,019 substances are included in this inventory.

2.2.4 Biocidal Product Regulation (BPR)²³

BPR concerns the placing on the market and use of biocidal products and repeals the Biocidal Products Directive (BPD, Directive 98/8/EC)²⁴. All biocidal products require an authorisation before they can be placed on the market, and the active substances contained in that biocidal product must be previously approved. In principle, active substances meeting the exclusion criteria will not be approved i.e. carcinogens, mutagens and reprotoxic substances according to the CLP Regulation, endocrine disruptors, and PBT/vPvB substances.

The BPR Annex V classifies the biocidal products into 22 product-types, grouped in four main areas: disinfectants, preservatives, pest control, and others. There is a Union list of approved active substances (formerly Annex I of Directive 98/8/EC). As of July 2017, there are 272 active substance/product-type combinations for which an application for approval has been submitted under BPD or BPR.

2.2.5 Food and feed safety legislation

The EU has also taken measures to minimise contaminants in foodstuffs. The main legislations include the Regulation 315/93/EEC²⁵ on procedures for contaminants in food

(²¹) <https://echa.europa.eu/candidate-list-table>

(²²) Regulation (EC) No 1272/2008 of the European parliament and of the council of 16 December 2008 on classification, labelling and packaging of substances and mixtures, amending and repealing Directives 67/548/EEC and 1999/45/EC, and amending Regulation (EC) No 1907/2006. <http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2008:353:0001:1355:en:PDF>

(²³) Regulation (EU) No 528/2012 of the European parliament and of the council of 22 May 2012 concerning the making available on the market and use of biocidal products. <http://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:02012R0528-20140425&from=EN>

(²⁴) Directive 98/8/EC of the European parliament and of the council of 16 February 1998 concerning the placing of biocidal products on the market. <http://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:31998L0008&from=EN>

(²⁵) Council Regulation (EEC) No 315/93 of 8 February 1993 laying down Community procedures for contaminants in food. <http://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:01993R0315-20090807&from=EN>

and the Regulation 1881/2006²⁶ on maximum levels for certain contaminants in food: mycotoxins (aflatoxins, ochratoxin A, fusarium-toxins, patulin), metals (cadmium, lead, mercury, inorganic tin), dioxins and PCBs, polycyclic aromatic hydrocarbons (PAH), 3-MCPD and nitrates.

2.2.6 Industrial Emissions Directive (IED)²⁷

IED is the main EU instrument regulating pollutant emissions from industrial installations. Annex I of the IED lists the industrial activities that are required to operate in accordance with a permit. This permit must take into account the whole environmental performance of the plant, e.g. emissions to air, water and land, generation of waste, etc. The permit conditions include the emission limit values (ELV) for all relevant pollutants, based on the use of the best available techniques (BAT). The Annex II presents a list of polluting substances in air and water. Water pollutants also include the WFD PS.

2.2.7 European Pollutant Release and Transfer Register (E-PRTR)²⁸

The European PRTR implements at EU level the UNECE PRTR Protocol. For each industrial facility, the E-PRTR provides easily accessible data on pollutant releases to air, water and land as well as off-site transfers of waste and of pollutants in wastewater. 91 key pollutants are listed in the Annex II of the regulation (e.g. heavy metals, pesticides, greenhouse gases and dioxins). In addition, some information on releases from diffuse sources is also available.

2.3 Approaches in European Regional Seas

In Europe, there are four Regional Sea Conventions (RSC), which aim to protect the marine environment and bring together Member States and neighbouring countries. As the MSFD calls for regional cooperation, the RSC are developing action for the identification of relevant contaminants of concern.

2.3.1 UNEP MAP Barcelona Convention²⁹

The Barcelona Convention for the Protection of the Mediterranean Sea against pollution is implemented through the Mediterranean Action Plan (MAP), which aims to protect the Mediterranean Sea basin. The main legal reference regarding the reduction of pollutants is the protocol for the protection of the Mediterranean Sea from Land-Based Sources and Activities (LBS Protocol)³⁰. Currently, there are 28 substances (or group of substances) of concern under this protocol (Barcelona Convention Chemicals List). These substances were selected according to the following criteria: the substance is covered by regional and/or international instruments; the substance has an ELV or its ELV is under development; and the substance and/or its high input could represent a risk to the marine environment or human health. Only 10 of those priority substances are actually monitored under the UNEP/MAP MEDPOL monitoring programme (marine pollution assessment and control component of MAP).

A candidate list of additional chemicals has been proposed as a complementary target to be included in the Barcelona Convention. The candidate substances (e.g. pharmaceuticals

(²⁶) Commission Regulation (EC) No 1881/2006 of 19 December 2006 setting maximum levels for certain contaminants in foodstuffs. <http://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:02006R1881-20150731&from=EN>

(²⁷) Directive 2010/75/EU of the European parliament and of the council of 24 November 2010 on industrial emissions (integrated pollution prevention and control). <http://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32010L0075&from=EN>

(²⁸) Regulation (EC) No 166/2006 of the European parliament and of the council of 18 January 2006 concerning the establishment of a European Pollutant Release and Transfer Register and amending Council Directives 91/689/EEC and 96/61/EC. <http://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:02006R0166-20090807&from=EN>

(²⁹) Barcelona Convention for the protection of the marine environment and the coastal region of the Mediterranean. <http://www.unepmap.org/index.php?module=con-tent2&catid=001001004>

(³⁰) <http://ec.europa.eu/world/agreements/downloadFile.do?fullText=yes&treatyTransId=1334>

and hormones) have been selected from available international chemical lists (e.g. WFD and the Stockholm Convention) as well as from a recent list of marine-relevant contaminants (Tornero and Hanke, 2016a,b), and based on their occurrence in the Mediterranean, their production and use, analytical methods considerations, and current MEDPOL monitoring strategies. These chemicals should be targeted in the coming years under MEDPOL in order to gather relevant information for potential measures (UNEP, 2017).

2.3.2 The Commission on the Protection of the Black Sea Against Pollution (Black Sea Commission)³¹

The Black Sea Commission implements the provisions of the Bucharest Convention and the Black Sea Strategic Action Plan (BS SAP) with the aim of combating pollution from land-based sources and maritime transport. The BS SAP was adopted in 1996 and amended in 2009 in order to resolve transboundary environmental problems, including chemical pollution, according to MSFD provisions.

The Black Sea Integrated Monitoring and Assessment Program (BSIMAP) aims at producing a quality assessment of the Black Sea status according to the ecosystem quality objectives (EcoQOs) of the BS SAP. The EcoQO4 “*reduce pollutants originating from land based sources, including atmospheric emissions*” provides a list of contaminants to be assessed, both mandatory (e.g. petroleum hydrocarbons and heavy metals) and optional (e.g. detergents and organochlorine pesticides). The BSIMAP 2017-2022 entails screening for new pollutants with a view to updating the list of Black Sea specific/priority pollutants.

A first attempt to identify the Black Sea Specific Pollutants has been made within the EU (DG NEAR)-UNDP (United Nations Development Programme) Project EMBLAS-II³², which aims at improving the availability and quality of Black Sea environmental data in line with the MSFD and BS SAP needs.

2.3.3 The Baltic Marine Environment Protection Commission (HELCOM)³³

HELCOM works towards a Baltic Sea undisturbed by hazardous substances. HELCOM Recommendation 19/5³⁴ and annex I of the Convention specify the substances for which discharges, emissions and losses should be minimized in order to achieve good environmental status in the Baltic Sea by 2021 (list of substances of potential concern). Furthermore, the Baltic Sea Action Plan (BSAP), established in 2007, focuses on eleven substances of specific concern (HELCOM List of Priority Hazardous Substances³⁵) with the aim to develop measures preventing pollution of the marine environment. Those contaminants were selected and prioritized on the basis of their hazardous properties, their likelihood to reach the marine environment to a significant degree, their effects to human health or the environment, and their presence in the Convention Area.

According to HELCOM requirements, the lists of priority hazardous substances and substances of possible concern are to be regularly reviewed and updated based on monitoring and other scientific data. The working group on reduction of pressures from the Baltic Sea catchment area (HELCOM PRESSURE) agreed to launch such a revision in 2018. This review should take into account the results from other ongoing processes (e.g. current compilation on pharmaceutical substances in the Baltic Sea), and so reflect latest changes in global, European and regional approaches to hazardous substances.

(³⁵) HELCOM Recommendation 31E/1 ‘Implementing HELCOM’s objective for hazardous substances’. <http://www.helcom.fi/Recommendations/Rec%2031E-1.pdf>

HELCOM uses core indicators with quantitative threshold values as the basis for the assessment of the status of the Baltic Sea. Currently, there are eight core indicators for hazardous substances, which cover substances of specific concern to the Baltic Sea as described in the BSAP and are based on data from the HELCOM monitoring programme. Core indicators have also been developed to monitor effects on a top-predator, the white-tailed eagle, as well as to detect trends in oil-spills.

2.3.4 The Commission for the protection of the marine environment of the North-East Atlantic (OSPAR)³⁶

The OSPAR Hazardous Substances Strategy sets the objective of preventing pollution of the maritime area by continuously reducing discharges, emissions and losses of hazardous substances, with the ultimate aim of achieving concentrations in the marine environment near background values for naturally occurring substances and close to zero for man-made synthetic substances. OSPAR used a systematic approach to identifying which substances pose a risk for the marine environment based on information on substances' intrinsic properties, using OSPAR cut-off values for PBT properties (the Dynamic Selection and Prioritisation Mechanism for Hazardous Substances, DYNAMEC). Hence, OSPAR selected those hazardous substances that need to be addressed (List of Substances of Possible Concern, LSPC³⁷) and identified a rather extensive set of substances which should be given priority (List of Chemicals for Priority Action³⁸).

The OSPAR LSPC was adopted in 2002 and is regularly revised as new information becomes available (last revision in 2015). The aim is to identify those substances to which the Hazardous Substances Strategy should apply, but which are not covered adequately by the EC framework or some other international forum. The substances are grouped in four sections:

- Section A: substances which warrant further work by OSPAR
- Section B: substances of concern for OSPAR but adequately addressed by EC initiatives or other international forums
- Section C: substances which are not produced and/or used in the OSPAR catchment or are used in sufficiently contained systems making a threat to the marine environment unlikely
- Section D: substances which appear not to be "hazardous substances" but where the evidence is not conclusive

The OSPAR List of Chemicals for Priority Action was adopted in 2002 and revised in 2013. OSPAR's work focuses on the substances on Part A and has prepared a background document on each.

In 2016, OSPAR asked the International Council for the Exploration of the Sea (ICES)³⁹ for advice on the selection and de-selection of hazardous substances for priority action. This process is now ongoing and involves the identification and collation of projects, activities and sources of information for new and emerging substances. Two sources of information have been recognized as particularly valuable: the list of substances potentially released from sea-based sources provided by Tornero and Hanke (2016a,b) and the WFD prioritization exercise. Hence, ICES has proposed to focus on substance groups of emerging concern, such as dechloranes, alternative brominated flame retardants, per- and polyfluorinated substances (not PFOS, PFOA), and anticorrosion agents (especially those applied in windmill parks). The gathered information have to be evaluated and prioritized and results are expected by the end of 2017.

2.4 Others

2.4.1 Arctic Monitoring and Assessment Programme (AMAP)⁴⁰

AMAP is one of six Working Groups of the Arctic Council and focuses on the monitoring and assessment of the status of the Arctic region with respect to pollution and climate change issues. The AMAP Trends and Effects Monitoring Programme (ATEMP) is a harmonized programme for monitoring the trends and effects of contaminants in all compartments of the Arctic environment. Substances covered include POPs (e.g. aldrin, dieldrin, PCBs, and toxaphene), heavy metals, radionuclides, and petroleum hydrocarbons (AMAP, 2015). Since its establishment in 1991, AMAP have produced a series of assessments that have supported the establishment and further evaluation and development of the protocols on POPs and heavy metals to the CLRTAP and the Stockholm Convention.

In addition to those internationally regulated compounds, other “new”, largely unmonitored chemicals have been recently identified as “chemicals of emerging Arctic concern” and suggested as potential candidates for future research or monitoring. These compounds include brominated flame retardants, chlorinated flame retardants, chlorinated paraffins, current-use pesticides, halogenated natural products, hexachlorobutadiene (HCBD), organophosphate-based flame retardants (PFRs), organotins, pentachlorophenol (PCP), per- and polyfluoroalkyl substances (PFASs), pharmaceuticals and personal care products (PPCPs), phthalates, plastics and microplastics, polychlorinated naphthalenes (PCNs), PAHs, siloxanes, and unintentionally generated PCBs (AMAP, 2017). 684 compounds are currently included in a database available from the AMAP website (electronic Annex to the full scientific report presenting the results of the assessment). This database will be continuously maintained and updated by AMAP and contributors.

2.4.2 The United States Environmental Protection Agency (US EPA)⁴¹ list of priority pollutants

The US EPA priority pollutants are a set of chemical pollutants EPA regulates, and for which the EPA has developed analytical test methods. An initial list of toxic pollutants was established in 1977 based on a consent decree that settled a legal challenge to the US EPA's program for controlling hazardous pollutants. From this list, EPA selected and prioritized specific pollutants according to their frequency of occurrence and production volumes and the availability of a chemical standard for the pollutant. The current list contains 126 priority pollutants.

2.4.3 NORMAN Network⁴²

The NORMAN network is a permanent, self-sustaining network of reference laboratories, research centres and related organizations that enhances the exchange of information and data collection on emerging contaminants and encourages the validation and harmonisation of common measurement methods and monitoring tools so that the requirements of risk assessors and risk managers can be better met. NORMAN is of international significance with some members (e.g. USA and Canada) beyond the European boundaries.

NORMAN has developed a methodology for prioritisation of emerging contaminants, based on citations in the scientific literature. The NORMAN list (latest update February 2016) contains about 1000 substances, such as surfactants, flame retardants, pharmaceuticals, personal care products, biocides, polar pesticides and their degradation

⁽⁴⁰⁾ <https://www.apmap.no/>

⁽⁴¹⁾ <https://www.epa.gov/eg/toxic-and-priority-pollutants-under-clean-water-act>

⁽⁴²⁾ <http://www.norman-network.net/>

products and various proven or suspected endocrine disrupting compounds. NORMAN systematically collects monitoring data and information on effects and hazardous properties for these substances and, on the basis of this information, allocates them to pre-defined categories (substances for which there is not yet sufficient toxicity information, substances with evidence of hazard but not yet satisfactory analytical performance, etc.).

The list is regularly updated, with particular emphasis on metabolites and transformation products that appear as relevant emerging substances but are not part yet of regular monitoring programmes.

2.4.4 JRC list of marine-relevant contaminants

A recent investigation at JRC (Tornero and Hanke, 2016a,b) led to the compilation of a list of 276 chemical substances potentially released into the marine environment from major sea-based sources (shipping, mariculture, offshore installations, seabed mining, dredging and dumping at sea incl. ammunition and shipwrecks). Although this list should not be regarded as a "priority list", since the substances were selected without considering their toxicological properties and/or marine concentrations, it should improve the knowledge regarding substances that might occur in the marine environment and thus help guide the identification of relevant contaminants for MSFD Descriptor 8 implementation.

2.5 Other EU chemical databases

Besides regional efforts, there have been recent improvements in harmonization for data collection at EU level and distribution between legislations, regional frameworks and scientific initiatives.

2.5.1 EMODnet⁴³

The European Marine Observation and Data Network (EMODnet) involves more than 160 organisations assembling marine data, products and metadata from diverse sources in a standardised and harmonised way. EMODnet is currently in its third development phase with the target to be fully deployed by 2020.

EMODnet-Chemistry involves currently a network of 46 marine research and monitoring institutes and oceanographic data management experts. This data portal aims to provide high quality marine chemistry data sets and data products, based upon inputs gathered and collated from national monitoring efforts and activities from research institutes in European marine waters and global oceans. Substances for which data are at this time available include pesticides, antifoulants, pharmaceuticals, heavy metals, etc.

2.5.2 WISE-Marine⁴⁴

In 2007, the European Commission and the European Environment Agency launched the Water Information System for Europe (WISE), a gateway to information on European water issues for the general public and stakeholders. This system has been extended to cover marine waters. WISE-Marine, currently in development, will offer Member States a common platform to facilitate their MSFD reporting. It will also allow other actors such as NGOs, intergovernmental organisations, researchers and universities and the general public to access this data.

3 Results

Annex I of this report brings together in a single list substances coming from different lists of contaminants compiled by relevant legislation (WFD, Food Regulation 1881/2006, REACH), European RSC (Barcelona Convention, Black Sea Commission, HELCOM, OSPAR), global conventions (Stockholm Convention, Rotterdam Convention, Basel Convention, UNECE), and other international organizations and programmes (AMAP, US EPA, the NORMAN network, and JRC).

The resulting joint list contains more than 2700 substances (or groups of substances) for which their Chemical Abstracts Service identification number (CAS number) and European Community number (EC Number) have been provided (when available and following as far as possible the nomenclature and identification numbers provided by ECHA). It is interesting to note that the identification of the substances have been sometimes problematic due to different reasons, e.g. the assignation by different lists of the same CAS number to different substances or of different CAS numbers to the same substance, the assignation of a wrong number to a substance or the provision of a substance's name without identifier. It is not the scope of this report to show all the technical hitches found, but it appears relevant to highlight some of them. For example, the lists of emerging substances of AMAP and NORMAN provide different CAS numbers for metoprolol or citalopram; NORMAN and ECHA provide different CAS numbers for cineole, octocrylene, or salbutamol; there are substances with more than a CAS and EC numbers (e.g. abamectin, arsenic sulphide, cobalt arsenide); the CAS number provided by HELCOM for morfamquat corresponds to the ECHA substance morfamquat dichloride; some RBSP like mecoprop are reported by Member States with a CAS different from that of NORMAN or ECHA; etc. These examples illustrate the need for a more consistent and harmonized nomenclature among lists for an unambiguous substance identification.

It is also important to notice that different lists may refer to several substances as a group, while others refer to single substances, isomers or congeners within that group. This is often the case for PBDEs, organotins, PAHs, PCBs, etc. The groups of substances considered by particular lists have been specified in the joint list presented in the Annex I. This might be useful for further discussions regarding the appropriate way of grouping/combining substances for consistency in MSFD reporting, as required by the new Commission Decision 2017/848/EU.

Regarding the joint list, it is possible to see that only few of the compiled substances are considered under most individual lists. This is the case for organochlorine compounds such as PCBs, PCDDs, PCDFs, and the pesticides aldrin, chlordane, dieldrin, endrin, endosulfan, HCB, heptachlor, lindane, PCP, and toxaphene; brominated flame retardants such as polybrominated diphenylethers (PBDE) and hexabromocyclododecane (HBCDD); nonylphenols and nonylphenol ethoxylates (NP/NPEs); PAHs; perfluorooctane sulfonic acid (PFOS); phthalates such as dibutylphthalate (DBP) and di(2-ethylhexyl)phthalate (DEHP); short-chain chlorinated paraffins (SCCP); and trace elements such as arsenic, cadmium, mercury, and lead.

Specifically for the marine environment, only four substances (cadmium, lead, mercury and lindane) are considered under the current lists of chemicals of the four European RSC.

Many substances of the joint list are considered as emerging contaminants and not implemented yet in routine monitoring and/or assessment programmes nor included in the REACH or other convention's lists (e.g. alprazolam, chloroxuron, doxepine, chloronaphthalenes, fluorotelomer-based substances). Furthermore, many substances identified as RBSP by Member States are incorporated into the lists of emerging contaminants (e.g. ametryn, aniline, chlorpropham, secbumeton), while others are not in any of the compiled lists (e.g. acetamiprid, acetochlor, boscalid, disulfoton lenacil). Interestingly, only few RBSP (not WFD PS) are considered under any of the RSC: aramite, 17-alpha-ethynodiol (EE2), 17-beta-estradiol (E2), chlordecone, chlordimeform, chromium, chrysene, copper, DBP, 4-(dimethylbutylamino)diphenylamin

(6PPD), flucythrinate, hexachloroethane, kelevan, NPE, PBDEs, selenium, triphenyltin, and 2,4,6-tri-tert-butylphenol. This needs to be taken into consideration when selecting the relevant RBSP for MSFD descriptor 8 assessments, as required by the new GES Commission Decision.

4 Conclusions

This report describes and brings together several lists of contaminants to provide a single comprehensive list of chemical substances considered relevant by pertinent legislation, regional frameworks, international conventions and dedicated research programmes. The combination of the different options deriving from policy frameworks and scientific development will support a more complete assessment of chemical pollution in European marine waters. However, it is important to recognize that the present effort compiles a high number of contaminants, but it does not present a risk assessment. Hence, not all of these contaminants have to be considered of concern for the marine environment or for a particular MSFD region/sub-region. There are, in effect, major efforts currently underway, both at regional and international level, to identify the relevant contaminants. Harmonization in the identification approaches is desirable to achieve a similar level of protection across the different regions and policy frameworks. Thus, a close collaboration WFD-MSFD-RSC is deemed necessary.

It is interesting that most substances are regarded as emerging pollutants. At an international level, much effort has been directed towards the monitoring of these new chemicals in different compartments of the marine environment. However, further discussions regarding emerging contaminants and how to incorporate them into existing and/or future regulatory frameworks are needed, as well as discussions about the monitoring efforts required for the so-called legacy contaminants.

Moreover, many RBSP reported so far by Member States in their river basin plans are considered under different lists, although a significant number is not yet tackled by policy implementation and research. This might also trigger discussions for the identification of relevant RBSP for the marine environment.

The harmonization of nomenclature provided by this effort may assist to avoid ambiguities resulting from different chemical's names and identifiers, which is particularly relevant for the upcoming MSFD Descriptor 8 reporting, but also in general for international collaboration on marine contamination by chemical substances.

This joint list can also serve as a basis to discuss and agree on procedures for grouping/combining of substances at Union level, as required by the new Commission Decision EU/2017/848, and hence help ensure consistency in MSFD reporting.

Annex I. Substances (or groups of substances) considered under relevant EU legislation and international organizations

Abbreviations:

CAS number: Chemical Abstracts Service identification number

EC number: European Community number

WFD (Water Framework Directive): **PS** - WFD Priority Substance (status as at Directive 2013/39/EU of 12 August 2013); **Other Pollutants** - Pollutants included in the Annex II of Directive 2013/39/EU and for which a European standard applies, but not in the PS list; **Recomm. 1st Watch List** - WFD Watch list of substances for EU-wide monitoring (Carvalho et al., 2015); **RBSP**: River Basin Specific Pollutants (reported by 19 EU Member States and compiled by the European Environment Agency, update July 2017).

Reg. 1881/ 2006: Contaminants with maximum levels in foodstuffs set in the Commission Regulation (EC) No 1881/2006 of 19 December 2006.

Barcelona Conv. (Barcelona Convention): **LBS Protocol** - Substances of concern under the protocol for the protection of the Mediterranean Sea from Land-Based Sources and Activities; **MEDPOL** - Chemicals monitored under MEDPOL monitoring programme; **Candidate chemicals** - Additional chemicals proposed to be included in the Barcelona Convention (UNEP, 2017).

Black Sea Com. (Black Sea Commission): **BSIMAP** - Substances covered by the Black Sea Integrated Monitoring and Assessment Programme.

HELCOM (Baltic Marine Environment Protection Commission): **Subst. potential concern** - List of substances of potential concern specified in HELCOM Recommendation 19/5 and annex I; **Priority Hazardous Subst.** - HELCOM List of Priority Hazardous Substances; **Core indicator** - Indicators for hazardous substances of specific concern to the Baltic Sea (update 2015).

OSPAR (Commission for the protection of the marine environment of the North-East Atlantic): **Priority Action** - Substances which should be given priority (*Part A*: Chemicals where a background document has been or is being prepared; *Part B*: Chemicals where no background document is being prepared because they are intermediates in closed systems; *Part C*: Chemicals where no background document is being prepared because there is no current production or use interest); **LSPC** - OSPAR List of Substances of Possible Concern (*Section A*: Substances which warrant further work because they do not meet the criteria for Sections B-D and substances for which information is insufficient to group them in Sections B-D; *Section B*: Substances which are of concern but which are adequately addressed by EC initiatives or other international forums; *Section C*: Substances which are not produced and/or used in the OSPAR catchment or are used in sufficiently contained systems making a threat to the marine environment unlikely; *Section D*: Substances which appear not to be "hazardous substances" but where the evidence is not conclusive).

REACH (Registration, Evaluation and Authorisation of Chemicals): **Candidate SVHC Authori.** - Candidate List of Substances of very high concern for Authorisation (published in accordance with Article 59(10) of REACH); **Authorisation list** - Substances subject to authorisation under REACH (Annex XIV); **Restriction list** - Substances restricted under REACH (Annex XVII) (update August 2017).

Stockholm Conv. on POPs (Stockholm Convention on Persistent Organic Pollutants): **Annex A** - Chemicals listed in the annex A of the Stockholm Convention (elimination); **Annex B** - Chemicals listed in the annex B of the Stockholm Convention (restriction); **Annex C** - Chemicals listed in the Annex C of the Stockholm Convention (unintentional production).

Rotterdam Conv. (Rotterdam Convention): **Annex III** - Chemicals listed in the Annex III of the Rotterdam Convention; **Recomm. Annex III** - Chemicals recommended for inclusion in the Annex III.

Basel Conv. (Basel Convention): **Annex I** - Constituents of hazardous wastes contained in the Annex I of the Basel Convention.

UNECE (United Nations Economic Commission for Europe): **CLRTAP Protocols** - Substances included in the Aarhus Protocols on POPs and heavy metals to the Convention on long-range transboundary air pollution; **PRTR Protocol** - Pollutants included in the Annex II of the Protocol on Pollutant Release and Transfer Registers.

AMAP (Arctic Monitoring and Assessment Programme): **ATEMP** - Substances covered under the AMAP Trends and Effects Monitoring Programme; **Subst. emerging concern** - Chemicals of emerging Arctic concern included in the electronic Annex to the AMAP Assessment 2017.

USEPA Priority Pollutants: Set of chemical pollutants the US Environmental Protection Agency regulates, and for which USEPA has developed analytical test methods (update December 2014).

NORMAN Emerging Substances: List of the most frequently discussed emerging substances and emerging pollutants identified by NORMAN (latest update February 2016).

JRC list Subst. sea-based sources: List of marine specific contaminants identified as potentially entering the marine environment from sea-based sources (Tornero and Hanke, 2016a).

***Europe Direct is a service to help you find answers
to your questions about the European Union.***

Freephone number (*):

00 800 6 7 8 9 10 11

(*) The information given is free, as are most calls (though some operators, phone boxes or hotels may charge you).

More information on the European Union is available on the internet (<http://europa.eu>).

HOW TO OBTAIN EU PUBLICATIONS

Free publications:

- one copy:
via EU Bookshop (<http://bookshop.europa.eu>);
- more than one copy or posters/maps:
from the European Union's representations (http://ec.europa.eu/represent_en.htm);
from the delegations in non-EU countries (http://eeas.europa.eu/delegations/index_en.htm);
by contacting the Europe Direct service (http://europa.eu/europedirect/index_en.htm) or
calling 00 800 6 7 8 9 10 11 (freephone number from anywhere in the EU) (*).

(*) The information given is free, as are most calls (though some operators, phone boxes or hotels may charge you).

Priced publications:

- via EU Bookshop (<http://bookshop.europa.eu>).

JRC Mission

As the science and knowledge service of the European Commission, the Joint Research Centre's mission is to support EU policies with independent evidence throughout the whole policy cycle.
