Glossary

A collection of words
pertaining to Sanskrit agricultural vocabulary

Introduction

Scope

This collection is a fresh extraction of material from original texts. It contains items hitherto unrecorded in printed Sanskrit lexicons such as Apte, BHS, EDSHP, Grassmann, MW, PW, Pw, PwN and Stchoupak. In frame of traditional Indian agriculture this collection embraces nouns and exceptionally adjectives concerning the soil, the agricultural implements and operations, selected cultivated plants and men and animals employed in agricultural work. Nouns mean both simple words and compounds. Compounds consisting of more than two members have been taken up, if they denote an important term.

The density of extraction of items is different. The above categories of vocables from the *kṛṣiśāstras* i.e. textbooks on agriculture such as KāKS, KṛP, KṛŚ, KṛSN and Vv. (cf. Wojtilla 2006) as well as the relevant chapters of the Aā, AgP, AtS, BPS, KA, Kāj, KāŚ, MāS and VaiĀ have completely been extracted. The agricultural vocabulary of the Vaik totally missing from the printed Sanskrit lexicons has extensively been recorded. I also made use of the word index to the published text of a late supplement to PPr (cf. Vogel 2010). As to other Sanskrit texts referred to in his collection the extraction remains on at an at random level: it is the output of my research of many years into various aspects of the history of agriculture in India.

Technical aspects

The single articles give the form of the vocable, its grammatical status, meaning or meanings, cultural or other relevant information, if called for with short reference to the secondary literature, recording of the attested forms in chronological order.

Uncertain or wrong forms and uncertain meanings are indicated with a question mark.

Compounds are hyphenated.

The way of giving attestations follow the international practice: the title of texts are represented by sigla; Arabic numbers are used to mark books, if the text is divided into books, chapter, line or verses; a comma is used to separate the numbers referring to book, chapter, line or verse; a semi-colon is used either to separate texts where the given vocable is attested; a semi-colon is used to separate two or more attestations in a text; a full stop is used to separate two lines or verses in a text; round brackets are used to host additional information of any kind.
