

Build Closets FOR YOUR CLOTHES

Katie had some good strong boxes and crates.
The store owner gave her some packing boxes.

Look what Katie did with her boxes.

She used a big box to make a closet.
It was a box that a refrigerator was
packed in.

Katie's tips for building closets.

Put the rod at least 56 inches from the floor.
Put the rod 14 inches from the back wall.
Leave a 3-inch space above the rod.

This makes your clothes easy to take in
and out of the closet.

Katie says, "Look inside for more good closets you can build."

This is an "idea" bulletin. It does not tell how to make.

Build a closet on a wall.

Make a closet in a corner.

Katie likes to hang a curtain in front of her closet.
It looks nice and keeps the clothes cleaner.

For short clothes, put 2 rods in one closet. Put the top rod about 58 inches from the floor.

On the top rod, hang:

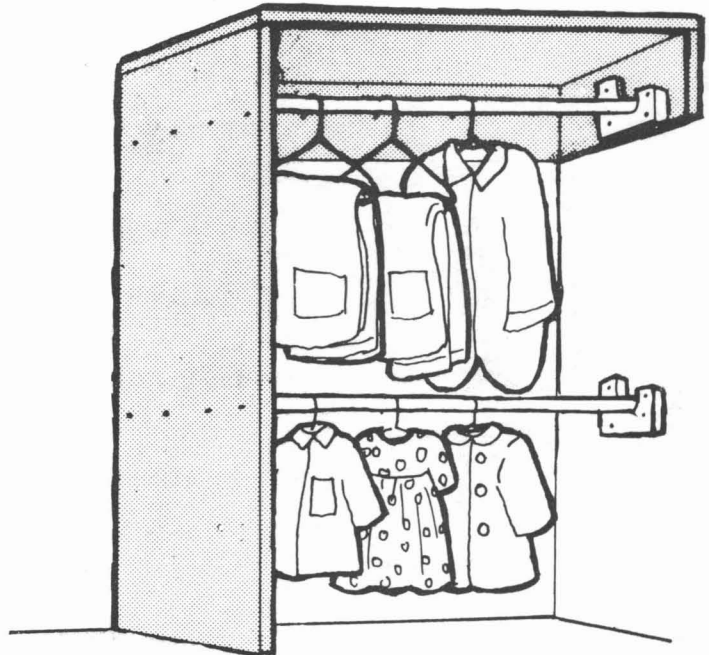

- pants
- suits
- shirts
- skirts
- blouses

Put the bottom rod about 30 inches from the floor.

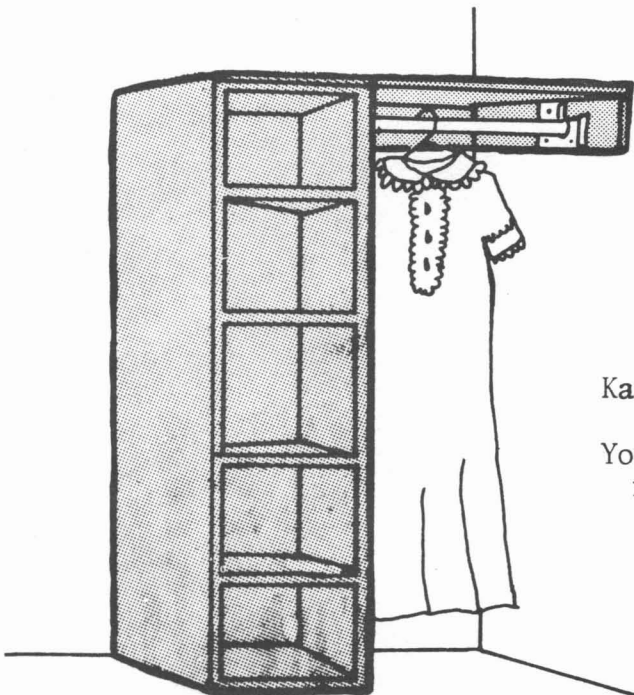

Put your children's clothes on the bottom rod.

Then your children can:

- get their own clothes
- learn to dress themselves
- learn to be neat and hang up their clothes.

You may want to make this closet taller.

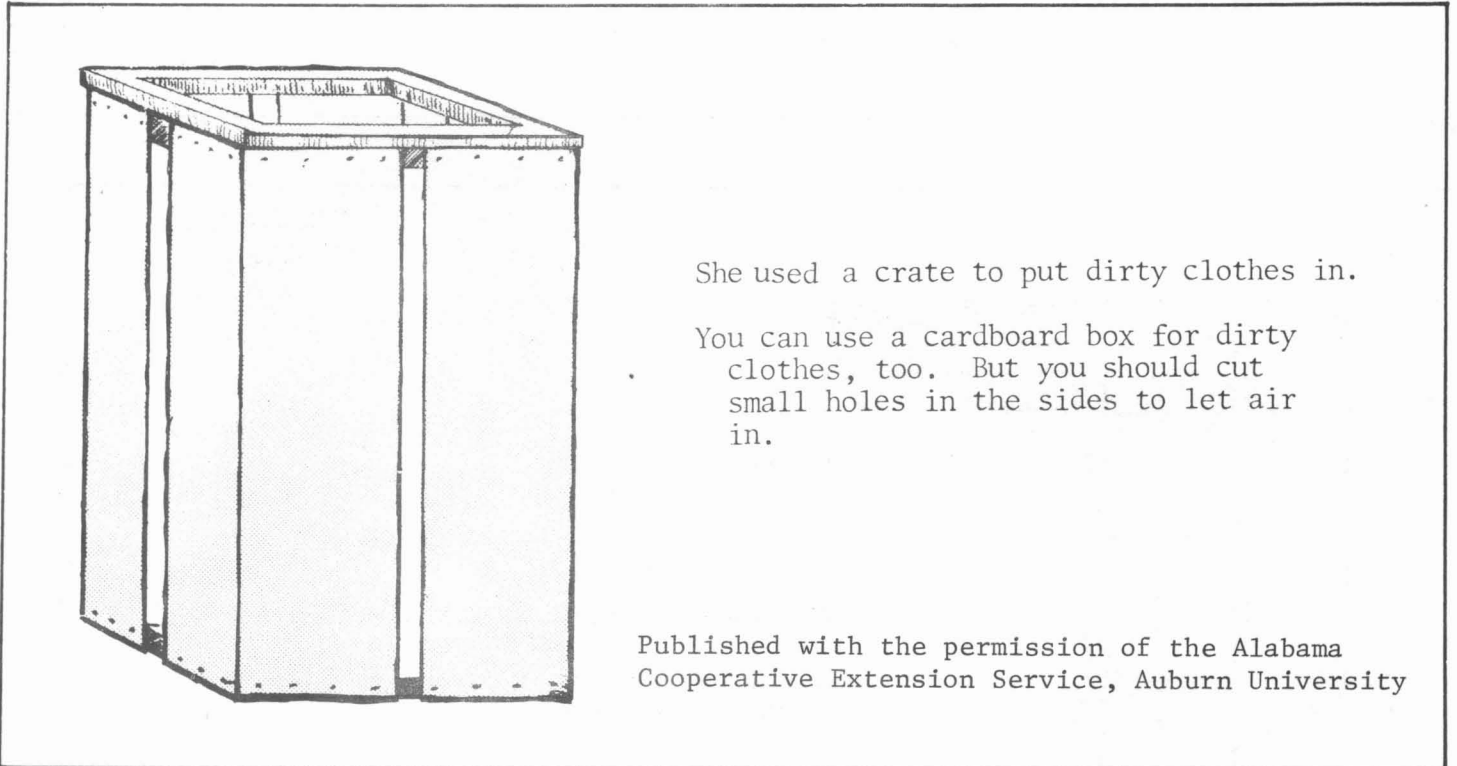

Katie made a closet with shelves on the side.

You can use crates or cardboard boxes to make these shelves.

More Places To Keep Clothes

Katie used boxes for folded clothes. She wrote each one's name on each box. Now she can find things easily.

She used a crate to put dirty clothes in.

You can use a cardboard box for dirty clothes, too. But you should cut small holes in the sides to let air in.
