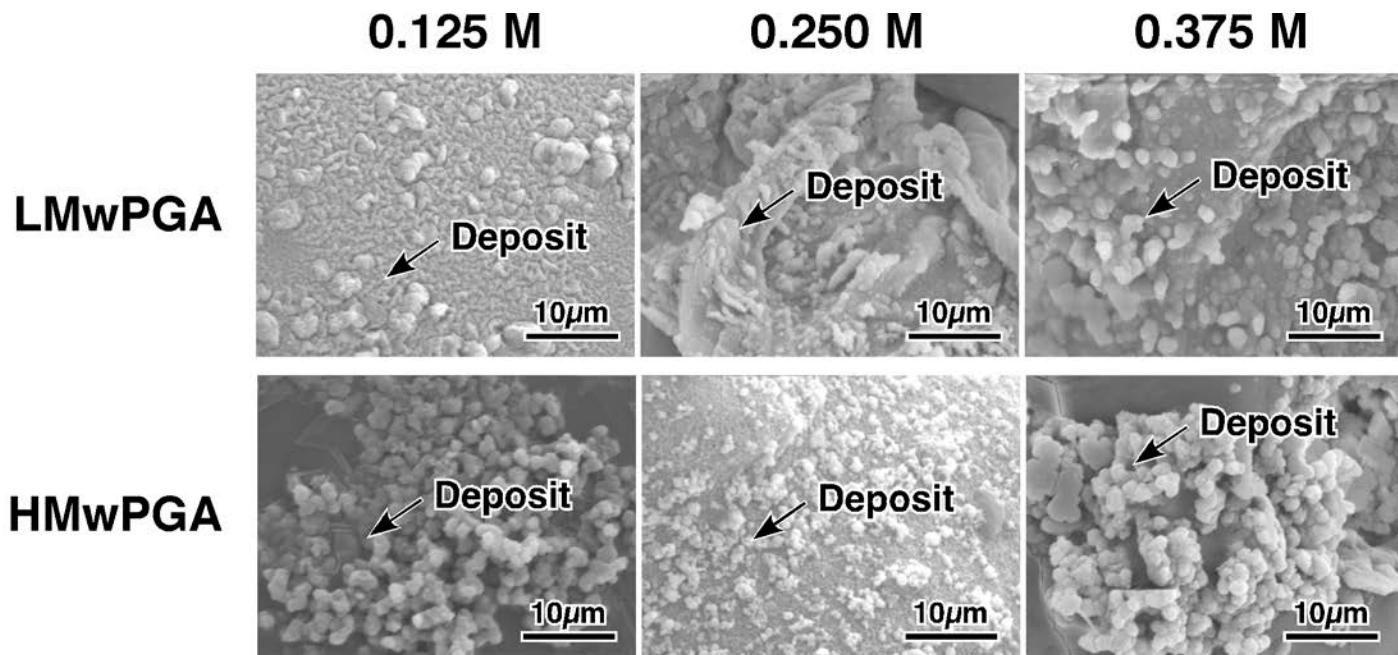

Fig. 1 SEM photographs of the surfaces of the specimens after soaking in SBF for 3 days, as a function of molecular weight of PGA and CaCl_2 concentration of the precursor solution.

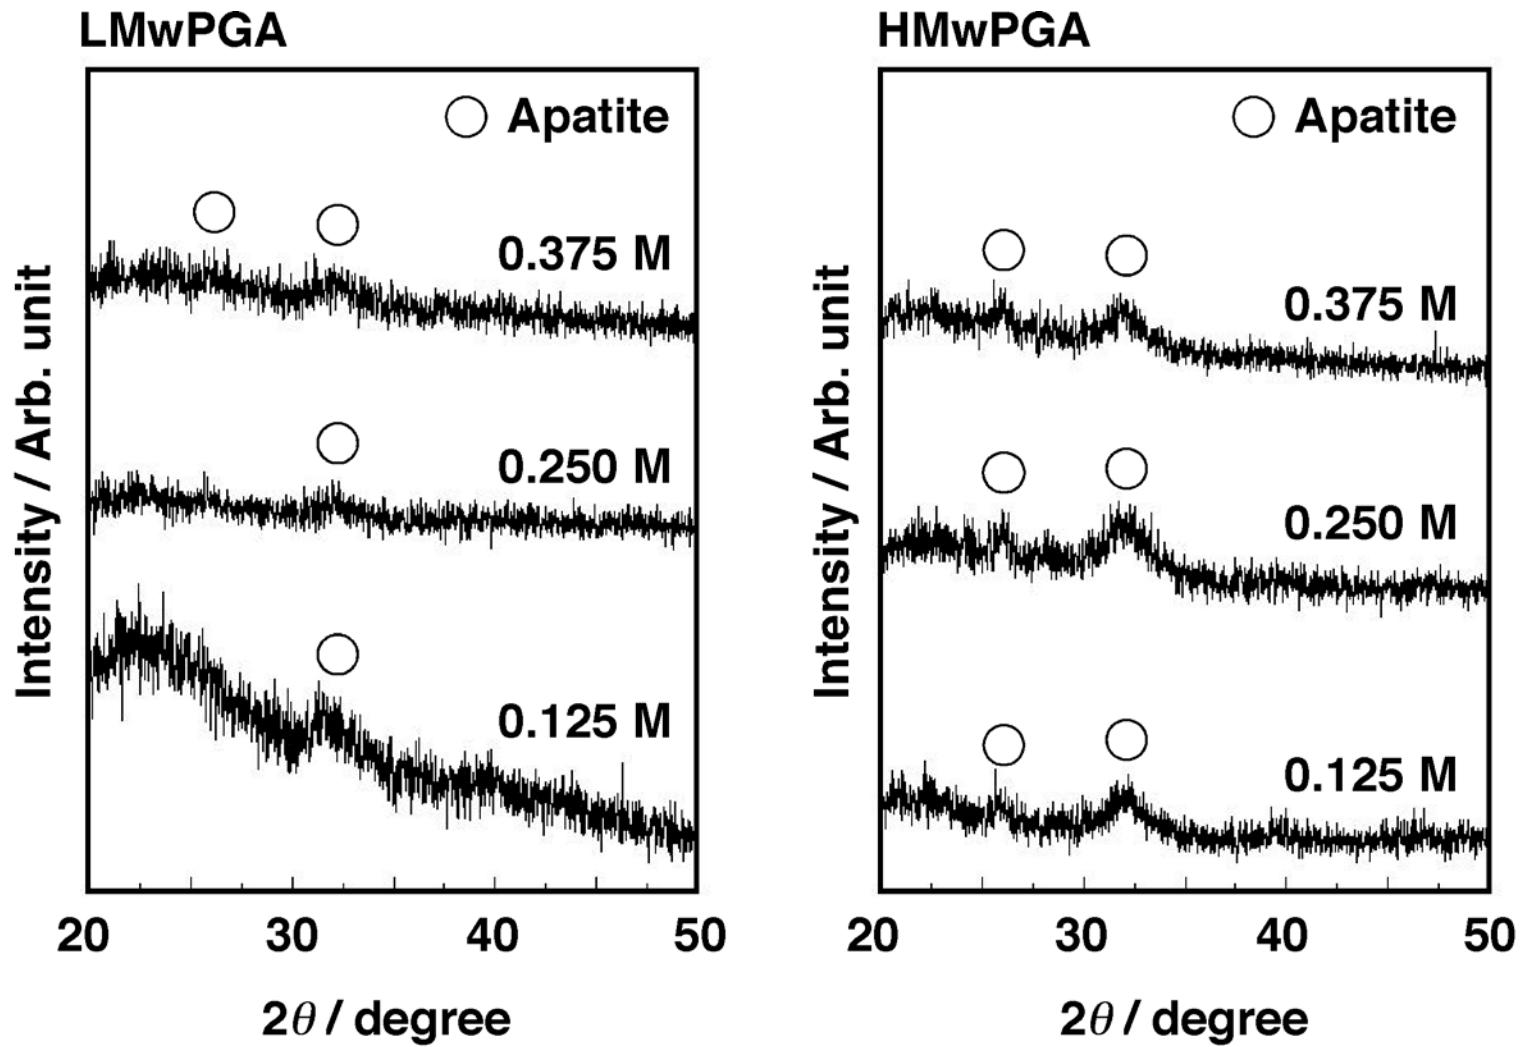

Fig. 2 TF-XRD patterns of the surfaces of the specimens after soaking in SBF for 3 days, as a function of molecular weight of PGA and CaCl_2 concentration of the precursor solution.

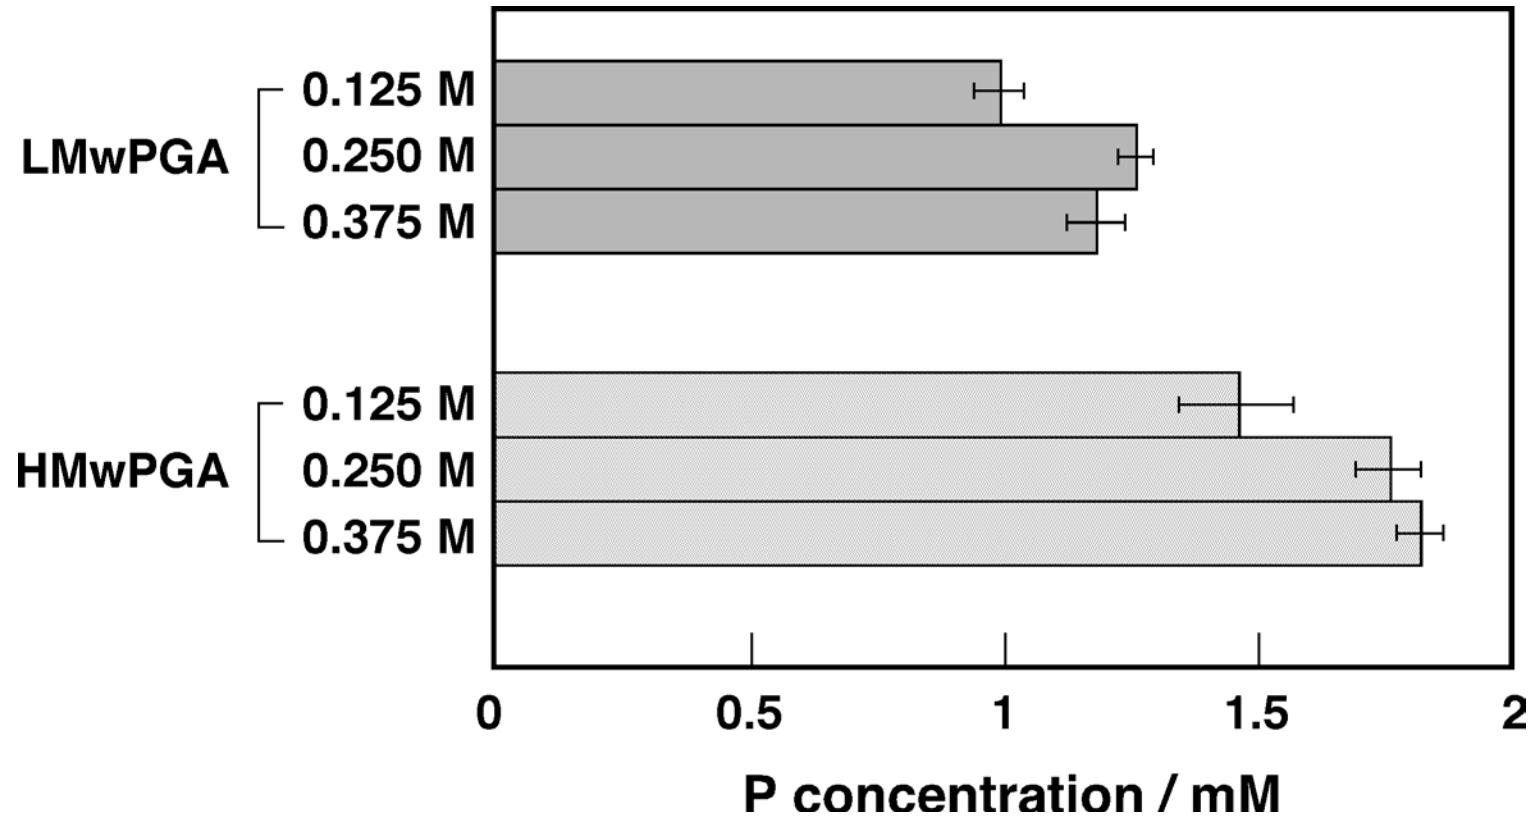

Fig. 3 P concentration of HCl solution which dissolved the precipitates formed on the specimens after immersion in SBF for 3 days (n=3).

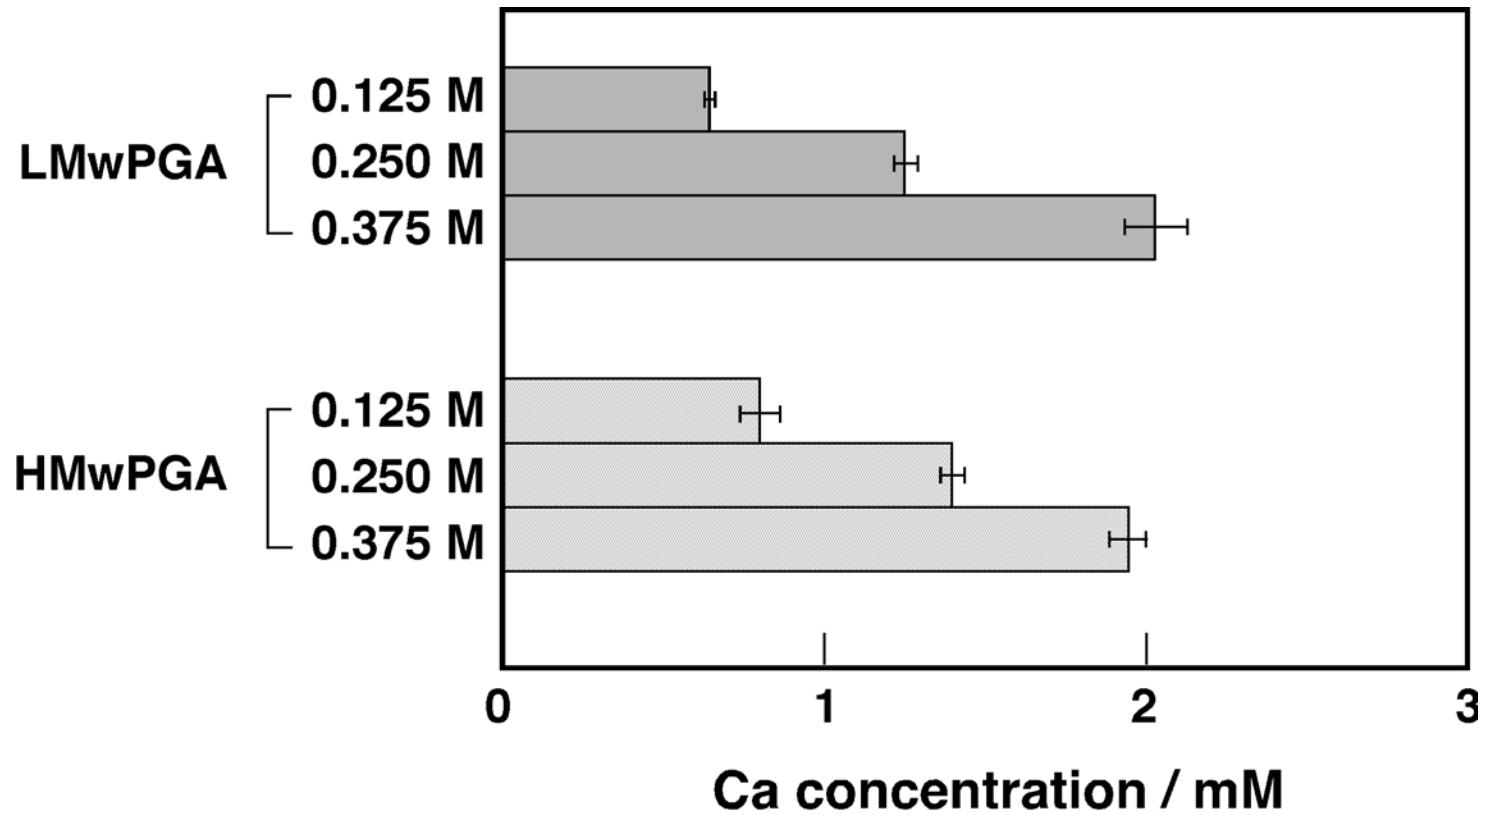

Fig. 4 Ca concentration of Tris-NaCl buffer after soaking of the specimens for 3 days ($n=3$).

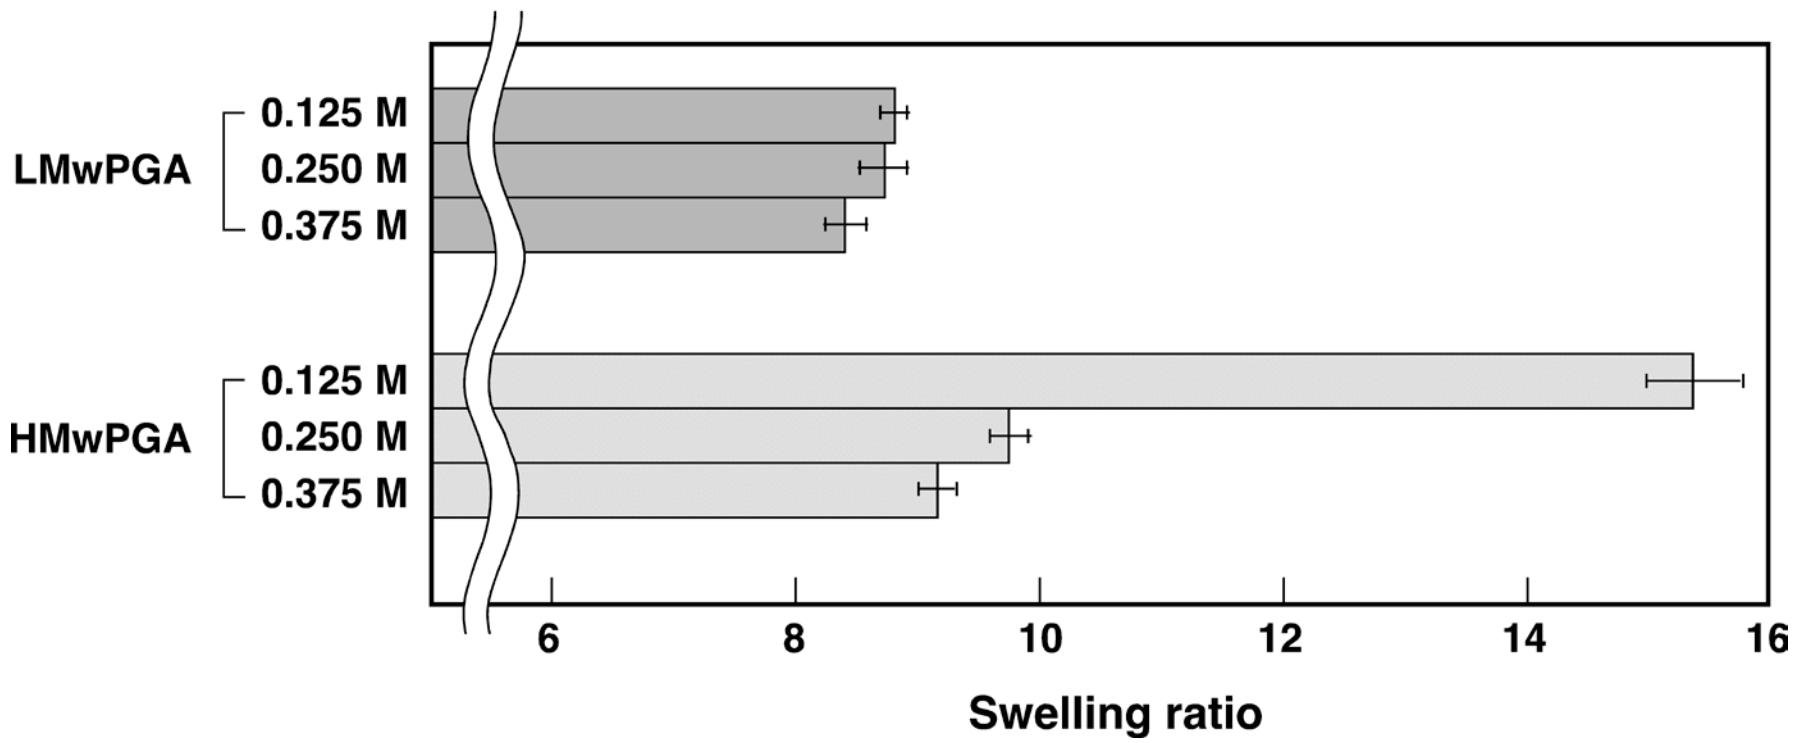

Fig. 5 Swelling ratio of the specimens, as a function of molecular weight and CaCl_2 concentration of the precursor solution ($n=3$).

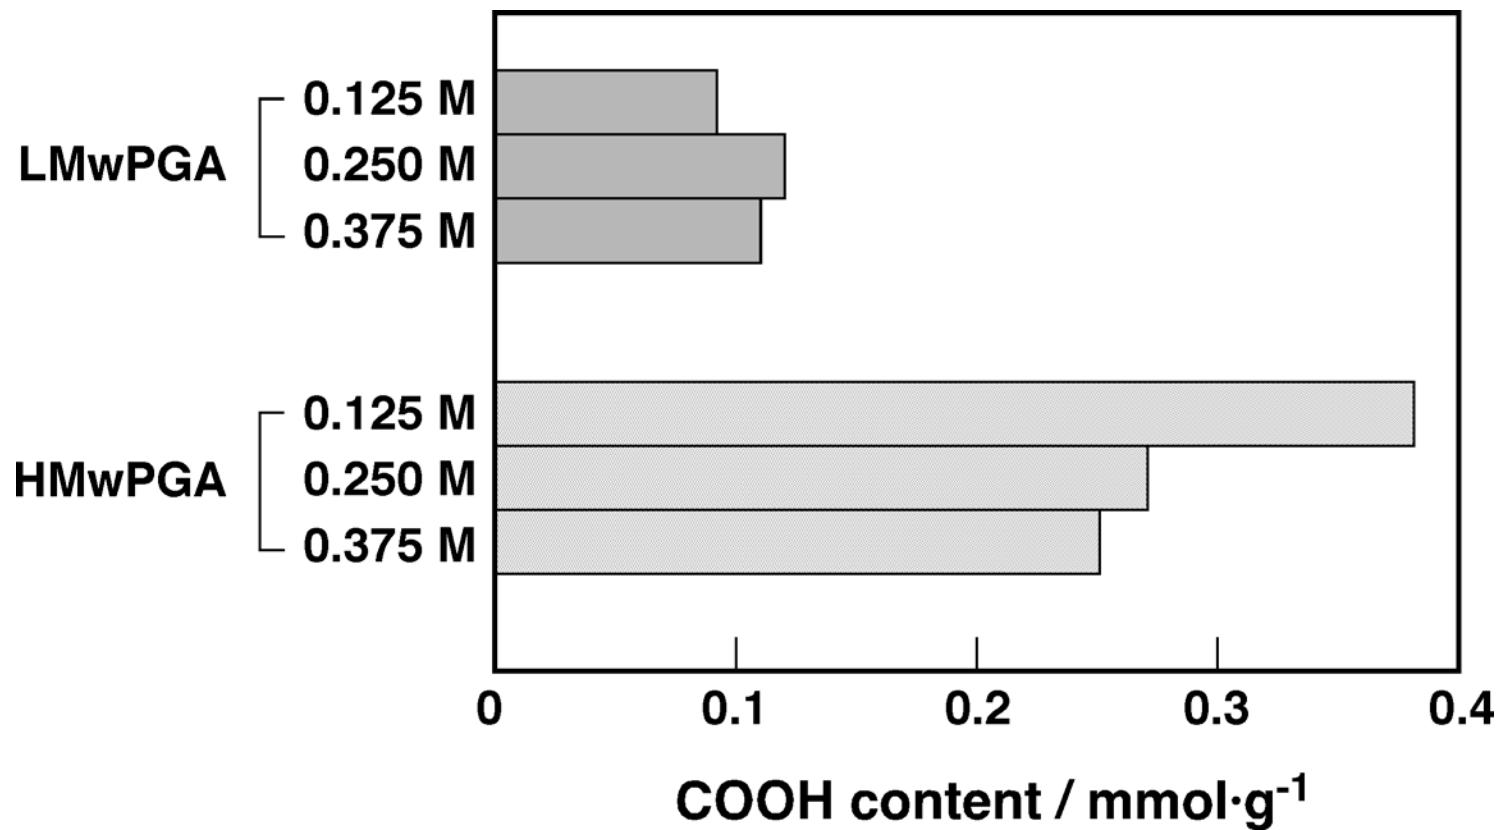

Fig. 6 Amount of carboxyl groups of the specimens, as a function of molecular weight and CaCl_2 concentration of the precursor solution.

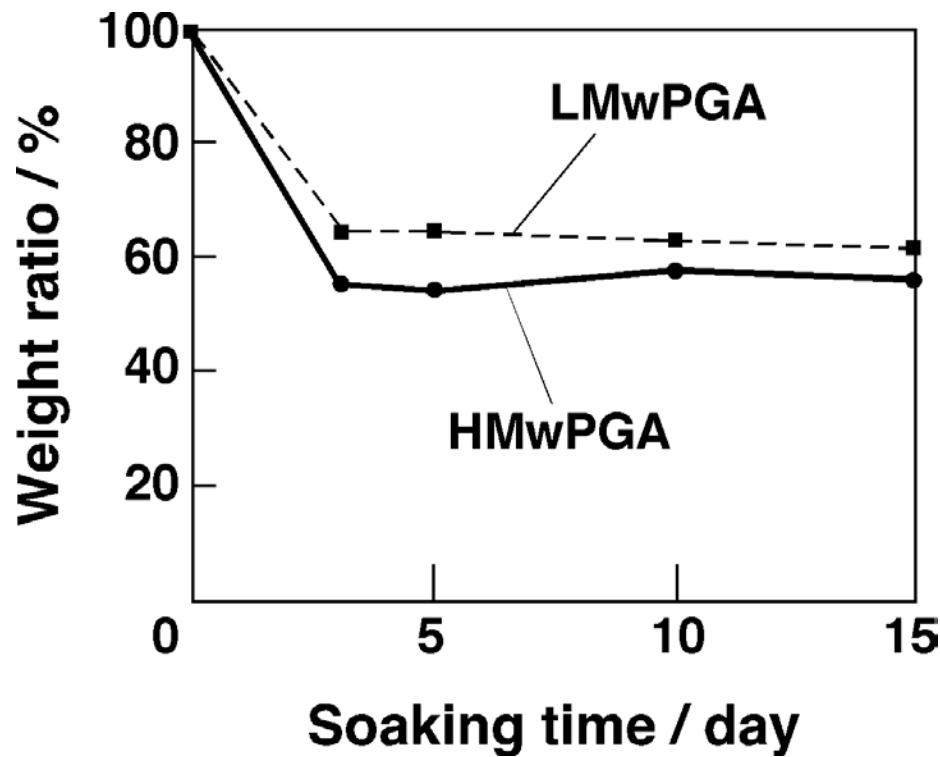

Fig. 7 Changes in weight ratio of the PGA hydrogels with different molecular weight after soaking in Tris-NaCl for various periods ($n=3$).
