Dielectric elastomer actuators (DEA) operate at voltage higher than 500V. DEAs devices are usually made of multiple independent actuators and therefore require bulky power supply and circuitry. This problem is solved by designing integrated high-voltage switches.

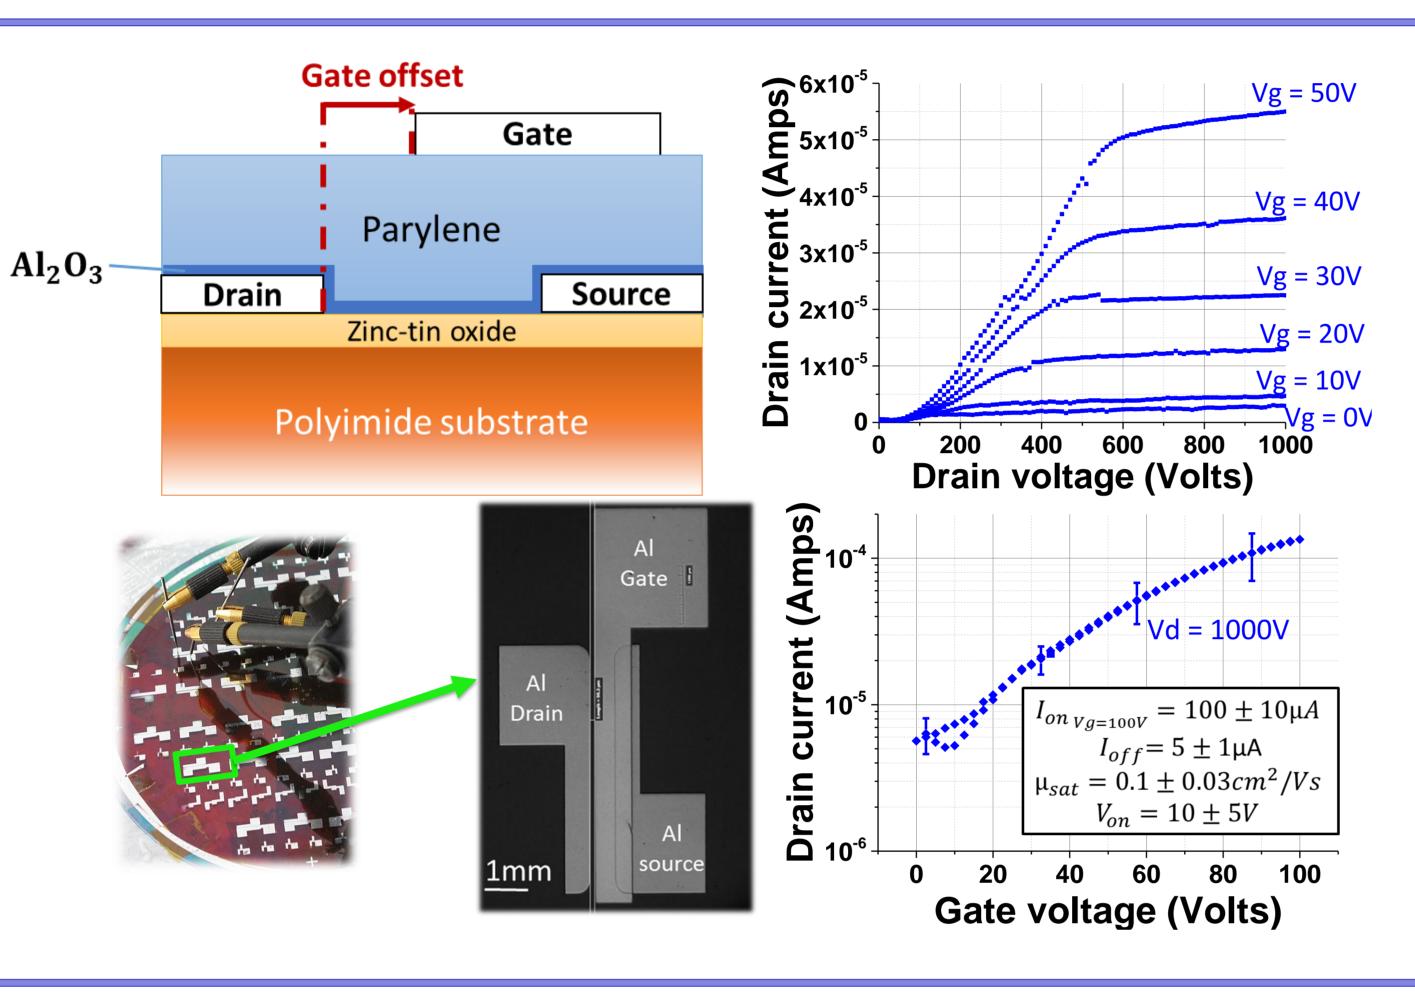

In this work, we demonstrate the design of flexible high voltage thin-film transistors (HVTFTs) operating as lowcontrol voltage switches to intelligently drive DEAs with one single high-voltage power supply.

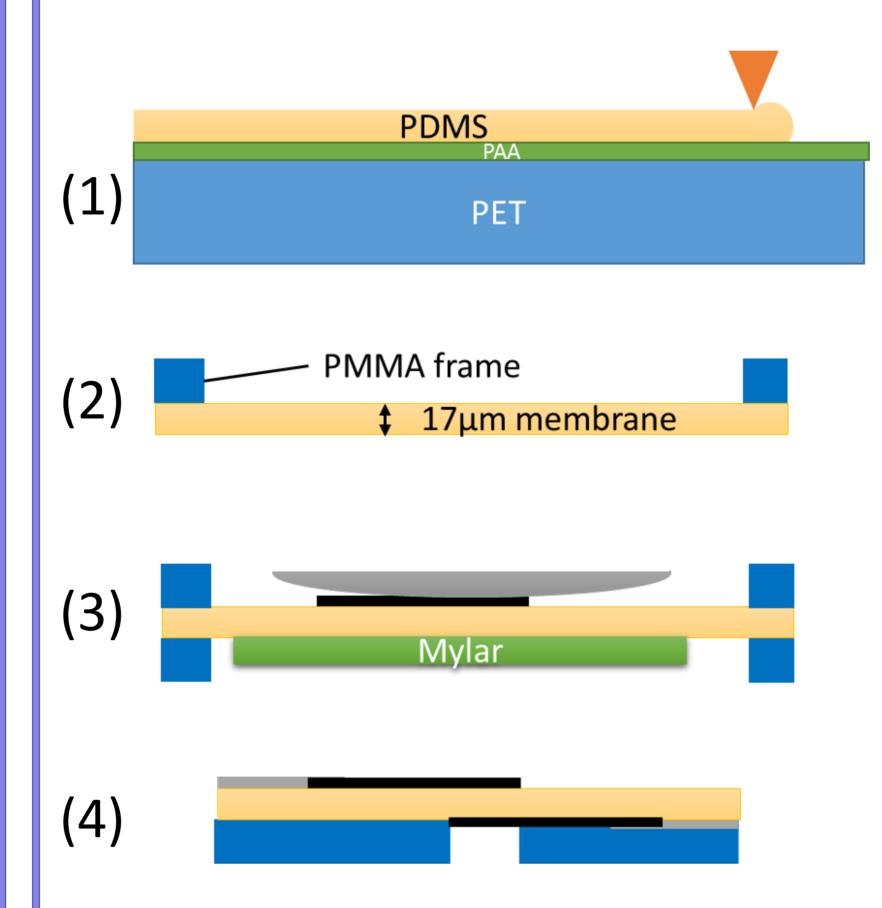

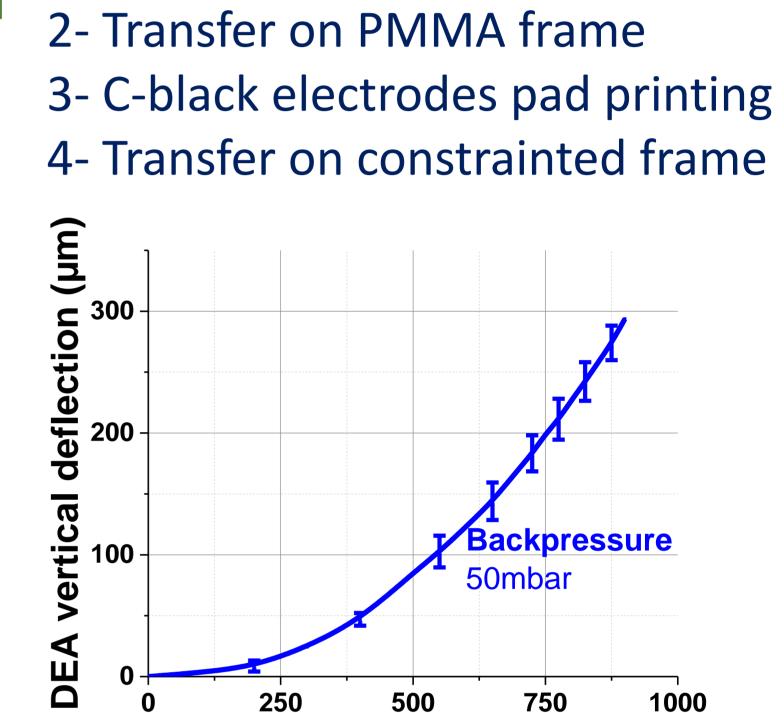

### Our HVTFT are designed

## to switch out-of-plane 1kV DEAs

**Fabrication** 

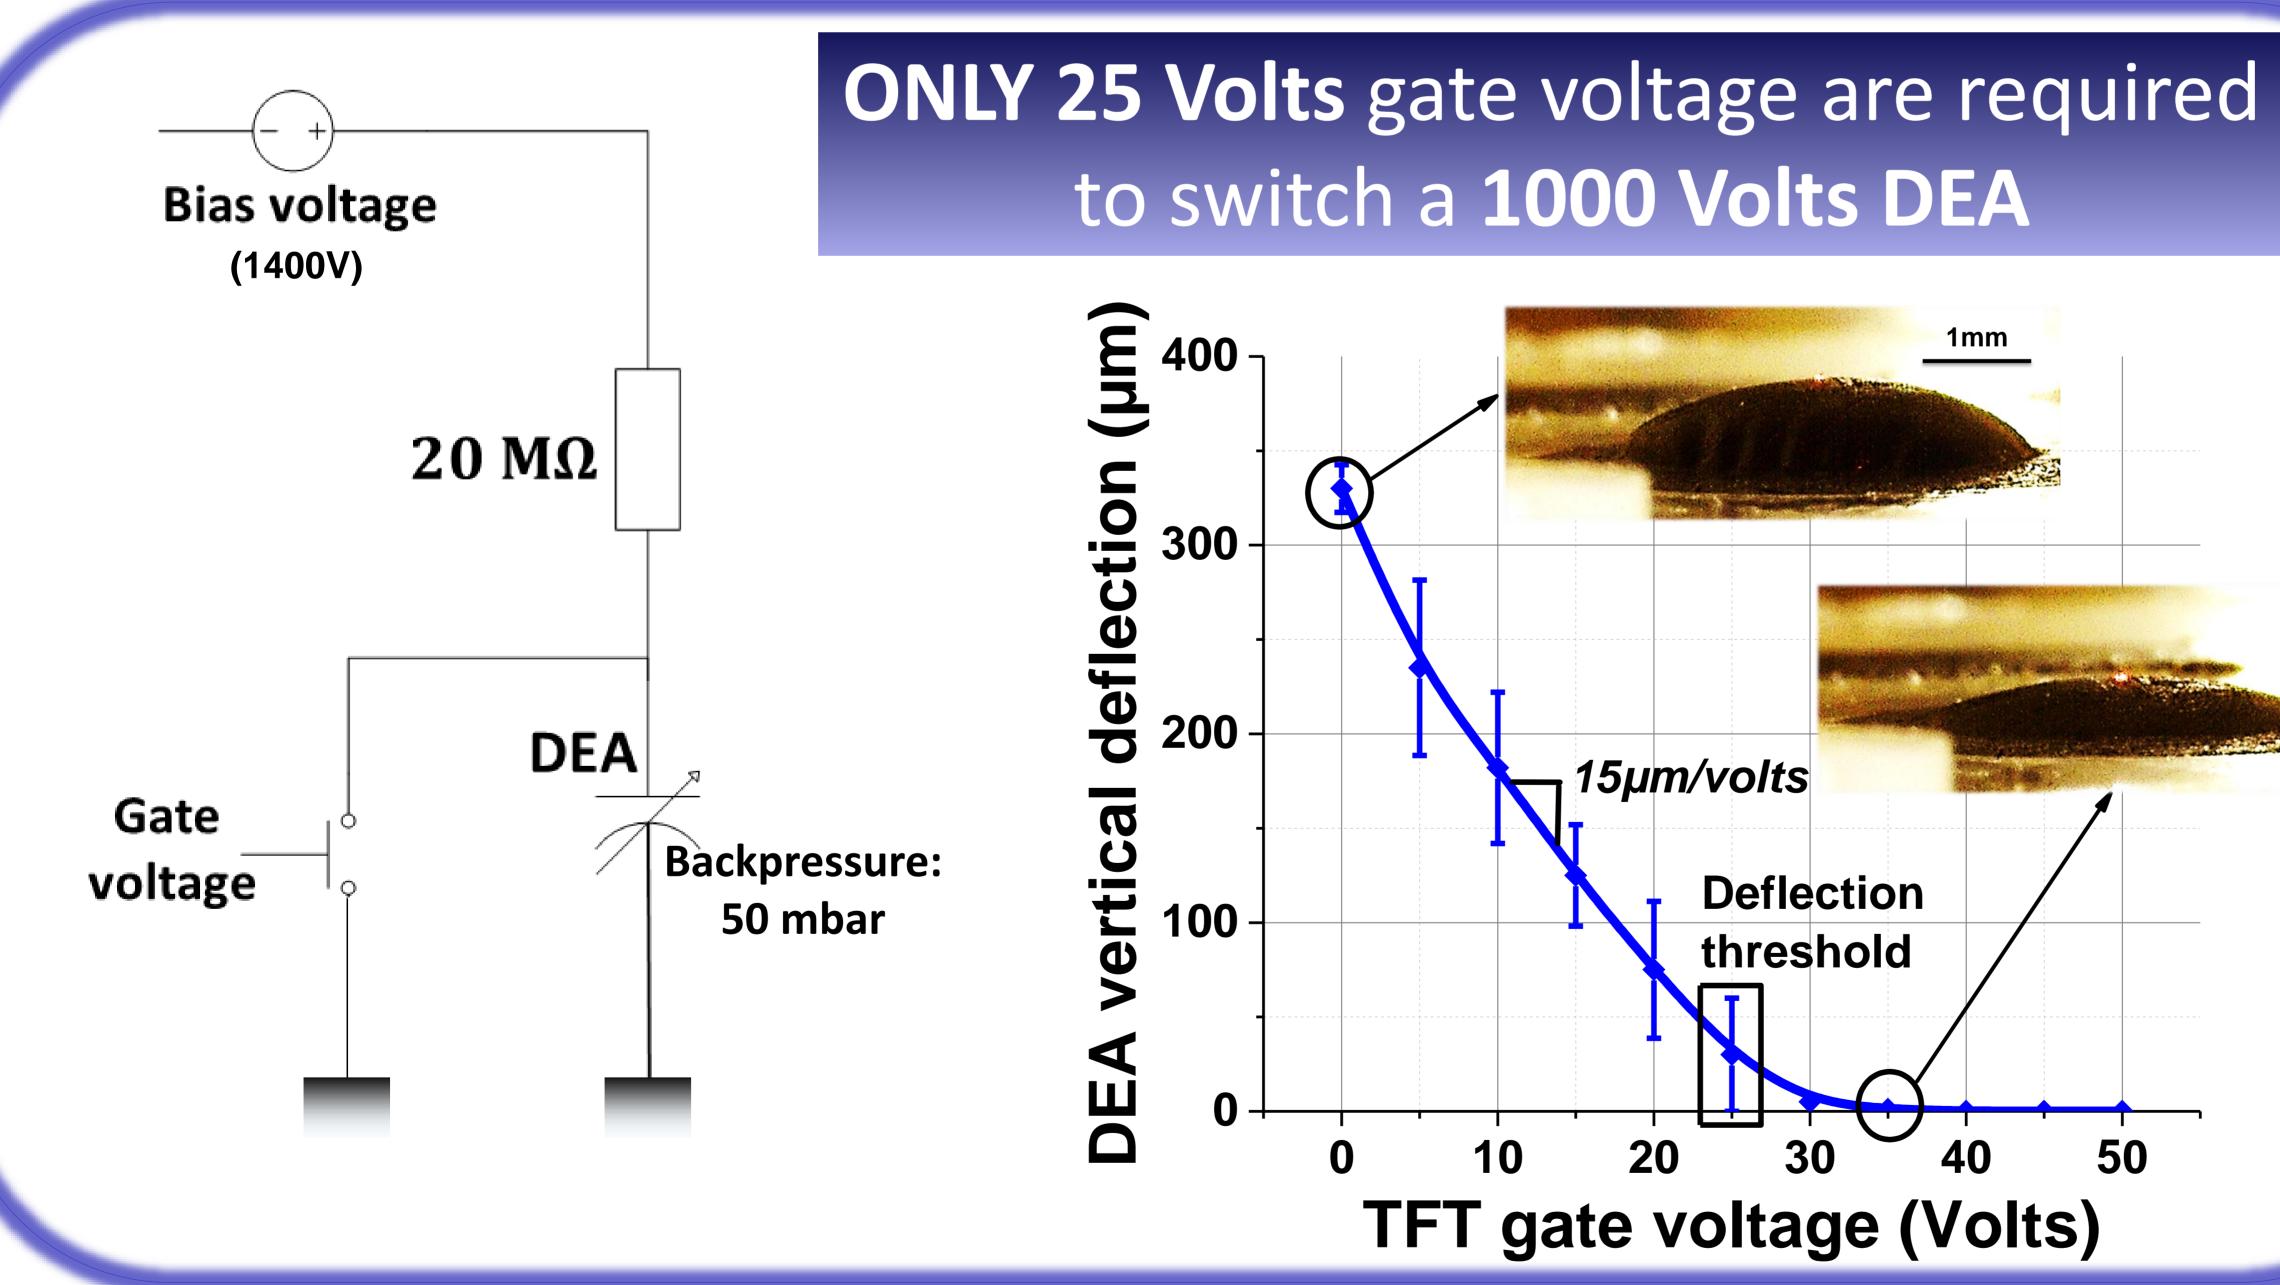

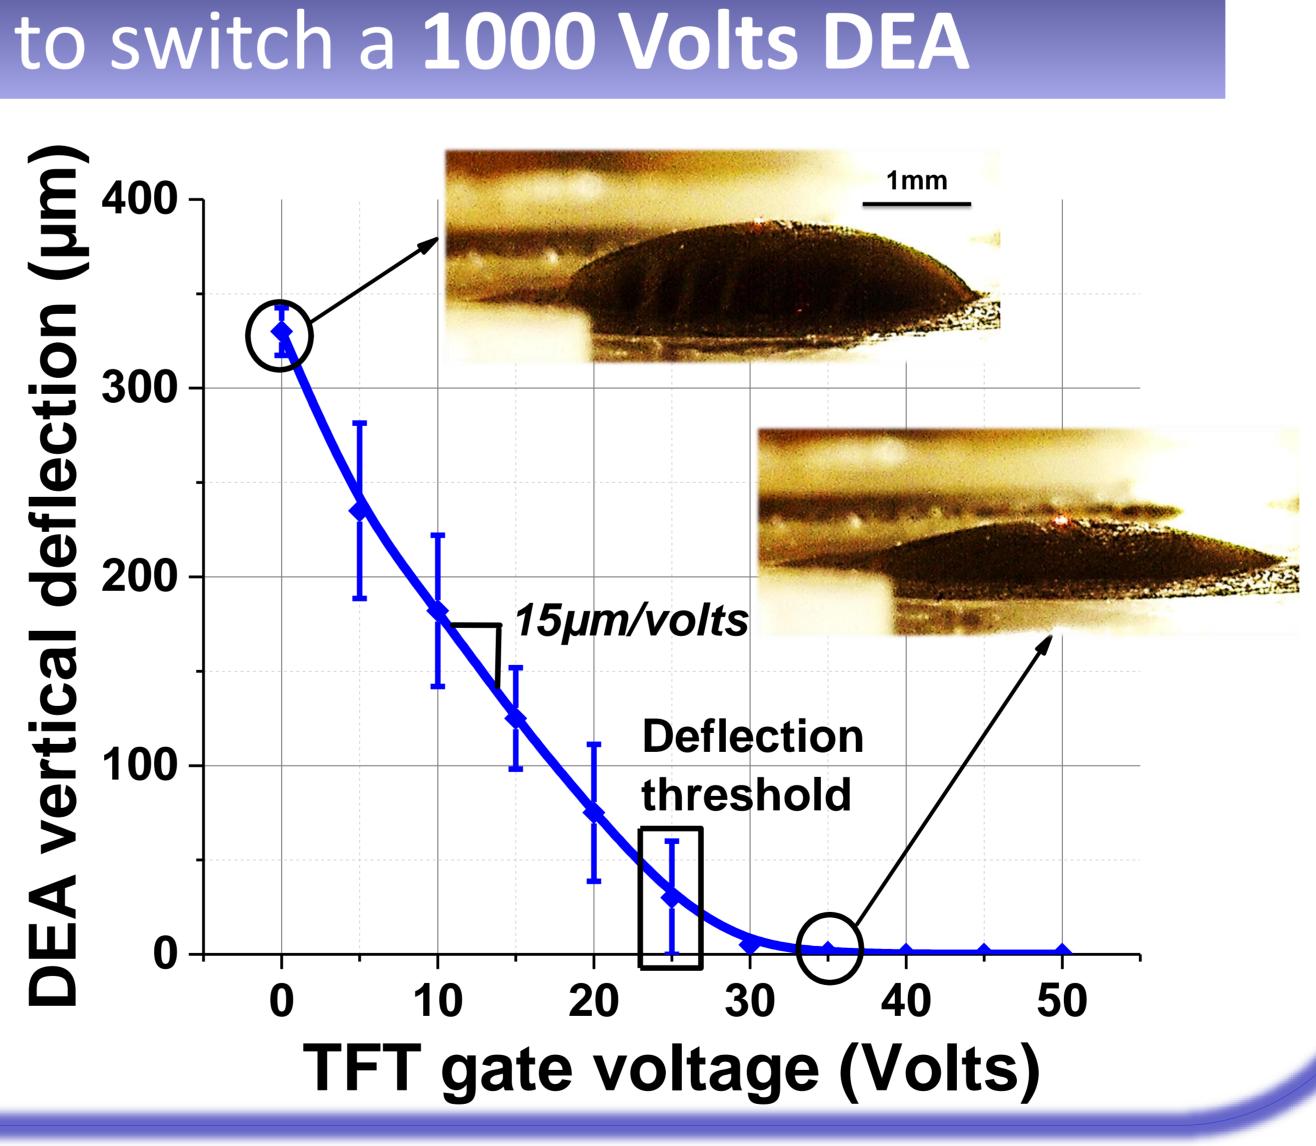

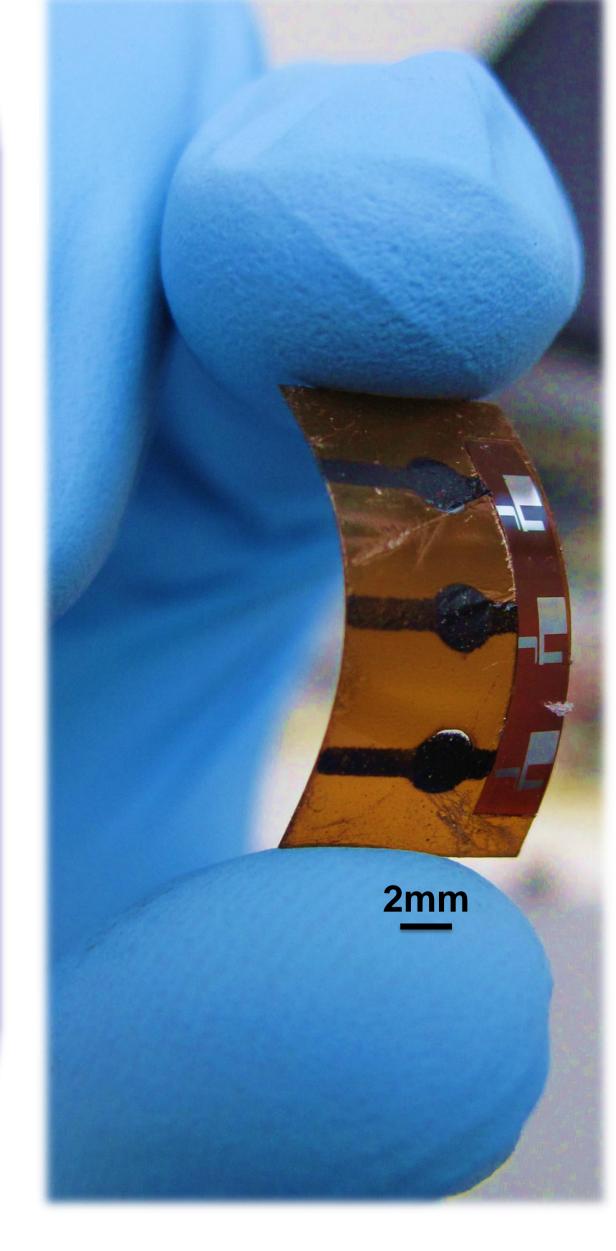

**Applied voltage (Volts)** 

1- PDMS blade casting and curing

#### What has been achieved?

✓ The first 1kV flexible metal-oxide TFT on polyimide

✓ The first DEA driven with a HVTFT

300µm vertical displacement by TFT switching on 1kV out-of-plane DEA

# And in the future?..

# of DEAs + TFTs **Examples of application Articulated soft-gripper Tens** Integrated DEA microfluidic valves Hundreds Flexible Braille displays housands
