ABSTRACT

Artists derive inspiration from daily life. According to John Dewey, common experiences are transformed into works of art through a process of compression and expression. In this paper we adopt this frame, showing how it is used within the pedagogical environment. Students were asked to reflect on their lives and offer an artful response to those experiences. Artfulness is defined here as a process which relies on the discursive practices of satire, and in particular irony and parody. We demonstrate the use of these rhetorical techniques as reflective tools, offering a service management class as an exemplar. In this class students were asked to consider their common experiences as both customers and service providers, and create an ironic artefact. We analyse a cartoon sequence produced by students in response to this assignment, where they parodied the fast-food service experience, illustrating how a business studies classroom can be transformed into an artful space.

All the world's a stage,

And all the men and women merely players

'As You Like It' William Shakespeare

Contemporary business schools have been criticised for their lack of attention to thoughtful inquiry, becoming more like factories that churn out graduates with the same simple answers to complex issues confronting organizations, rather than places of deep philosophical inquiry (Mintzberg, 2003). The popular press has picked up this plea for a better educated student populace, advocating for a liberal arts holistic education as a better preparation for students entering the business world (Hart, 2007).

In this paper we take up this concern by asking how educational processes in a management school might be *artful*. To address this question we discuss theoretical issues that underpin the introduction of artful approaches and in doing so we examine the nature of artistry and propose ways in which this translates into the learning environment. We offer an example of a traditional service management course, showing how students responded to the invitation to consider artful means of engagement with course content. We explore in detail a student assignment that uses cartooning as a method for describing the complex social and political relationships that underpin service work. First, though, we examine the philosophical grounds for taking this artful approach, discussing John Dewey's forays into the world of art creation.

ART COMES OUT OF LIFE EXPERIENCE

According to John Dewey, art making begins with daily experiences: spontaneous responses to life's events that might result in emotions that 'may be at the beginning hope or despair, and elation or disappointment at the close' (Dewey, 1934, p. 44). Such responses are unbridled, often surprising and sometimes uncomfortable, yet form the basis for artistic expression. However, according to Dewey, these multifarious emotions are not in *themselves* artistic. What is required, he argues, is that the artist reflects on these life experiences, and through a process of inner engagement with feelings and perceptions, distils them into an expression: a work of art.

To explain this expressive process, Dewey offers wine making as a metaphor. Grapes are pressed, squeezed of their juices, freeing the liquid from the rest of the grape. To complete the metaphor, Dewey poses that the resulting fermentation forms the artefact which the artist displays. He then translates this metaphor by defining a process where impulses are *compressed* within the psyche and then *expressed* in works of art. This order is important, for artistic expression cannot occur without a sustained period of compression, a phase during which the artist makes sense of the myriad of daily encounters and experiences. To this end Dewey writes:

An impulsion cannot lead to expression save when it is thrown into commotion, turmoil. Unless there is com-pression nothing is ex-pressed. The turmoil marks the place where inner impulse and contact with environment, in fact or in idea, meet and create a ferment.

(Dewey, 1934, p. 69)

In sum, by using this imagery of compression and expression, Dewey claims that it is what we *do* with our emotional responses that form the ground from which artistry grows. Hence an artistic approach maximises life's experiences by reflexively and deliberately exploring spontaneous feelings. In this way expression is wrung from daily life by a heightened awareness of sometimes even banal events.

Within the educational environment, the artful teacher's role is to find ways in which students can compress their life experiences. In this paper, we propose that as management educators consider how to provide a climate that facilitates compression and expression in students' hearts and minds, then the classroom becomes artful.

Further, we maintain that the artful classroom is a dialogic space where both students and instructors learn. Such a space, however, requires several characteristics in order for dialogue to flourish. Dewey notes that a unique energy underpins artful experience and in order for this energy to be creative, there must be both *rhythm* and *resistance*.

For Dewey, our sense of rhythm is innate and begins in the natural world with seasonal oscillations: the daily cycle of sunrise and sunset; sunshine and rain; and even in birds as they continually fly and perch. These natural rhythms are translated into artistic forms and are seen most notably in poetry and music. The notion of rhythm sets up what Dewey calls 'suspense': an expectation that with each act, or 'beat', there is more to follow. 'Each beat,

in differentiating a part within the whole, adds to the force of what went before while creating a suspense that is a demand for something to come' (Dewey, 1934, p. 161).

Rhythm, with its 'ordered variation of changes' (Dewey, 1934, p. 160) is dialogic in that it implies 'movement' (Bohman, 1996, p. 58) from one state to another. Furthermore, according to Kosnoski, movement within a dialogic context establishes 'a rhythm of challenges and responses, revelations and acknowledgments, appeals and acceptances' (Kosnoski, 2005, p. 658). However, for each of these rhythmic elements to accrue towards movement, there must be resistance.

Dewey argues that resistance collects energy and it is this energy that maintains rhythmic cycles. Hence as one position becomes the prevailing view, resistance builds up until it is replaced by a new reading of that established position. He writes that 'Each gains intensity for a certain period, but thereby compresses some opposed energy until the latter can overcome the other which has been relaxing itself as it extends' (Dewey, 1934, p. 161).

Thus, Kosnoski's (2005) notions of 'challenge', 'revelations', and 'appeals' offer resistance to current beliefs and opinions, thereby giving way to 'responses', 'acknowledgements' and 'acceptances'. In this way, the rhythms of challenge and acceptance and the resultant forward movement maintains an active dialogic space where learning can occur.

How, though, do these artful elements translate into the classroom environment? We propose that the discursive vehicle of irony and the tools of the satirist provide a context for artful learning in that they create resistance to prevailing ideologies and challenge current practices. Irony allows students to interrogate what is immediately evident and to present alternatives. Working within its doubting frame (Rorty, 1989) enables them to both compress their experience and then express it in multidimensional satiric art forms such as parody, burlesque and comic strip.

IRONY AND PARODY

Irony in all its assorted presentations always harkens back to the character in Greek comedy called the *eiron*: a dissembler who seemed to naively speak simply of what he saw those around him acting out. His words, conveying more than he overtly seemed to intend, allowed *hidden* meanings to emerge, for his honest and dissenting voice counterpointed with the

pretensions and stupidities of the self-deceiving behaviours and pronouncements of those in legitimate positions of authority that surrounded him.

In ironic performances it is this etymologically traceable notion of dissembling that still informs both the production and the reception of an ironic work of art: the artist who produces a work that speaks directly, in a familiar language and of a dominant subject, is all the while creating spaces for *an-other* image, story, quality or idea to take the stage. And because seeking out the story within the story is a demanding interpretive process, the audience as they push aside the dominant front and open up the counterpointing story, also become intimately involved in the creative process. Each movement, image or textual moment of an ironic art experience is both prelude and finale, rhythmically opening up interpretive angles on one view while closing down exploration of another that simultaneously initiates a return to the first.

If this kind of dialogic intensity is maintained an ironic art experience may enable response that initiates the establishment of a new position; but such a change depends on the intensity of the energy that is basic to the artful experience as previously described in terms of rhythm and resistance. If, for a moment, we think of the play of irony in satiric art forms as yet another colony of metaphor, we see that it works by yoking the known to the unknown: we identify with the familiar (experience, story, image, idea or aesthetic) and simultaneously learn something new about it when shown what it is like in some unexpected, unfamiliar or unlike context.

For instance, when Swift could not make English politicians and farmers understand the horror of their Irish tenants' poverty, a situation with which they were certainly familiar, he wrote a 'Modest Proposal' for them (Swift, 1729/1964). In the dispassionate voice of an accounting bureaucrat outlining a perfectly rational agricultural economic policy, he suggested that the Irish (whose only success was the breeding of children) should farm their offspring for profit, thereby providing tasty morsels for gentlemen's tables; ridding themselves and England of a burdensome population, and providing themselves with an income. To have simply accused the English: 'You are effectively eating the Irish' arguably would not have provoked a learning experience similar to that of reading his treatise.

As readers we become creatively involved with a text when it makes deep demands of us on an intellectual as well as emotive level. Whatever the form that irony takes, verbal, structural

or dramatic, and whether it is discovered in subtle word play, ludicrous parody, or witty lampoon, it is left to readers to tease out suggested, rather than stated, meaning and to share responses that enable and reveal different interpretations of the erstwhile familiar. The reader's comfortable recognition of the familiar in the text prompts identification with it, while the incongruity of form and content, or perhaps the juxtaposition of like with unlike in the content, challenges stable interpretations to make way for at least dichotomous, and very probably multiple, readings. When the response is laughter – amused or black – a thinking response has melded with a feeling response: the reader has begun to 'feel their thought as immediately as the odour of the rose' (Eliot, 1951, p. 287), to have thought that is an experience capable of modifying sensibility.

For Richard Rorty the ironist becomes pre-eminent; the prosopopoeia who is able to see beyond surface readings and explore deeper meanings inherent within the text. In order to understand this shift, Rorty relates the word irony closely to doubt (Rorty, 1989). He characterises an ironist as having an ability to doubt, to accept doubt as a necessary condition of existence and then within this doubting frame, understand that language is in constant re-descriptive flux.

The language of irony avoids positions becoming fixed; and while doubt accepts the validity of a set of beliefs and firmly held positions, at the same time it 'constantly questions and doubts' those assumptions (Rehn, 2002, p. 47). Rorty explains this fluidity by arguing that 'the terms in which [we] describe [our]selves are subject to change, always aware of the contingency and fragility of [our] final vocabularies, and thus of [our]selves' (Rorty, 1989, p. 74). For Rorty the less certain the final vocabulary, the more open we become to actively and continually negotiated meaning. Through irony an idea is interrogated by inquiring into what lies beyond that concept. In Rorty's inimitable language, irony searches for the 'painted backdrop' behind the painted backdrop (Rorty, 1989, p. 54), notions that are not seen but are nonetheless present, and yet that are still to be seen and acknowledged.

At this point in the discussion, three issues need to be highlighted. The first is that, implicit in Rorty's discussion of irony, is the idea that an ironist may operate like an artist where personal reality is continually re-described using crafts such as writing, painting, and music. The second is that although some might argue that irony involves unequal positioning where a greater truth is set against a lesser one, Rorty argues that language is always contingent, and that an ironist avoids any *final language*, and that one idea is no more important than its

ironic contrast. By holding this position it is not possible to be *pompous* or *lecturing*, qualities that are often the subject of satire and parody. Here the language game is more strident and pointed, where the satirist is more likely to point out contradictions between an *observation* and a *reality*, especially if it involves human suffering. Irony, on the other hand, is both an attitude and a tool used by comedians, writers, and other artists – including musicians (Sheinberg, 2000) – to probe beyond prevalent ideologies, thereby offering new ways of viewing the world. Finally, it should be noted that irony is not necessarily funny and it does not have to involve humour.

Irony is thus central to the satirical works of the many genres that fall within the generic realm of burlesque. Terms for species of burlesque such as parody, lampoon and travesty are often used indiscriminately because there are no fixed boundaries around their forms and functions, but most critics would probably agree that all satires aim to evoke laughter, indignation or contempt as correctives of human foibles follies, and vices. Mocking a self-important or elevated subject by presenting it in an incongruously undignified manner is a form of parody that is an immediately accessible and an endlessly creative learning experience for students being introduced to critical thinking.

Having scoped the idea of artful encounters through satire we now turn to a discussion on how this plays out within the classroom. We work with the notion that parody uncovers prevailing ideologies, and through artful expression, readers are invited to reflect on the issues that the students explored.

CASE STUDY: PARODY AND THE ARTFUL PROCESS

In exploring the use of irony and parody as an artful tool, we discuss an undergraduate Service Management course which forms part of a Business Studies degree. In this course a contemporary service industry, fast-food, is used to introduce students to central service management concepts such as: the nature of services; strategy; technology; demand and supply; the service encounter; facility location and design; quality assurance; growth and globalisation. They are asked early in the course to visit a fast-food establishment and describe how the firm operationalizes these key concepts, as well as other common terms such as: front-stage/back-stage functions; queuing systems; aesthetics; service scripts; customer participation in the labour process; the service bundle; and the service package.

The fast-food industry is used throughout the course because fast-food enterprises, as modelled by McDonalds, have been influential on many other service non-fast-food businesses. Students are familiar with fast-food as consumers, and some as employees; young peoples' first employment experience is often in fast-food. Fast-food also tends to have an easily observable production process, because a large part of the business is visible to the customer. An initial descriptive familiarisation assignment affirms students' experience, making the abstract course concepts immediately relevant to their daily lives. In addition students learn the language of the service management field which provides the essential techniques of the service manager.

Having learnt some of the techniques of service management, the students were then given a brief to 'create a parody using some aspect of customer service that you have learnt during the course.' Students were briefly introduced to parody as a rhetorical method, and examples were shown in class. Examples of service parodies proliferate on the Internet in sites such as YouTube which are devoted to lampooning aspects of customer service that people find frustrating (see Parker, 2006, for a discussion of this type of organizational flotsam). Students were encouraged to use visual methods to construct their parody, and a range of possibilities were suggested to them including: video, song, Power-Point presentation, comedy skit, cartoon, comic strip and animation. One of the reasons for asking students to create visual rather than text-based parodies was that English was not the first language of many of the students and the instructor wanted them to have an opportunity to use a visual mode of communication that was more universally accessible.

The students were asked to engage with a core philosophy in service management; that customers actively participate in the service process, and that the service experience is *created* in the relationship between the provider and client. The students were told that their efforts would feature in future service management courses, enhance future students' experiences, and provide exemplars of quality for others to follow which would be, if appropriate, posted on the university's web-based learning environment (WebCT). Consequently their participation in the course as customers themselves, and involvement in this assignment would create artefacts that would demonstrate their participation in the learning process, and remain as part of the course as it developed into the future, thereby inspiring others.

Students responded using a variety of media. The example we use here as an illustration is a comic strip that was generated by two students who focused on the role of the employee delivering customer service to a difficult customer in a fast-food restaurant. In our exploration we present the comic strip, teasing out relevant aspects such as the mode of communication, and pedagogical ideas.

Before we begin discussing the comic strip, we briefly introduce the comic-strip code, because the medium communicates much of the message we discuss in this paper (McLuhan, 1973). Cartoons and comics have a long history and expressions of the form proliferate in contemporary times. With their origins traced to pre-linguistic cave-drawing, where animal figures and handprints drawn deep in caves were the first evidence of symbolic representations of human experience (Hogben, 1949), they are now commonly accepted as a mainstream art form (Sabin, 1996).

In scoping its history Randall Harrison notes that the cartoon is a modern adaptation of these visual pictograms, with the English artist William Hogarth (1697–1764) being credited as the ‘first cartoonist’ in Western history. Furthermore, it should be noted that the Japanese have claims to cartooning originating back to the 12th century (Harrison, 1981, p, 74).

Hogarth and later European and North American cartoonists popularised the idiom as a means of political protest and persuasion, and its spread was assisted by reproductive print technologies. Over time these political cartoons were absorbed into newspapers and periodicals as they drew readership to editorial pages, entertaining and providing graphical crystallisations of the complex issues of the day.

Humour cartoons developed almost as a separate genre and tended to focus on everyday issues, and were often structured like verbal jokes. In the 1880s, a major innovation in cartooning was the advent of the comic strip, where a story is told in a sequence of pictures. The comic strip grew rapidly in popularity, and has evolved to take advantage of new technologies with comic books, graphic novels, narrative art, and animation (moving cartoons).

For a reader, the cartoon provides a *gestalt*, where the whole is more than the sum of its parts. This gestalt occurs because the cartoonist uses techniques of caricature, which ‘exaggerates individuating characteristics of the subject’ (Perkins, cited in Harrison, 1981, p. 54), making the focus of critique easier to perceive. In terms of visual cues, Harrison (1981) argues that

cartoonists are able to distil a message down to its core substance, and this is achieved through the three basic techniques. First by *levelling* the cartoonist radically reduces the perceptual field from 3 dimensions to a 2-dimensional frame, colour is stripped making it monochromatic black on white, and only the outline of a figure is retained, thereby only offering hints of the form's texture, shade and shape. All needless objects and details are dropped. Second, the technique of *sharpening* highlights the important items in the image stand out, making them more important. For instance, a person's head in a cartoon is often bigger than the body, and as emotional expression becomes more important, the head, and its features expressing emotion, such as the mouth and eyes, expand. The third technique, *assimilation*, involves exaggeration and interpolation where the image is translated through larger symbols so that the fiction being created in the cartoon makes sense for the reader. Consequently, a 'square-jawed hero becomes even more firm of jaw. The dull person is made to look positively idiotic and the mean one becomes thoroughly villainous' (Harrison, 1981, p. 57).

The student exemplar we explore is a cartoon of an over-the-counter fast-food encounter. The central character is a young, female fast-food worker, at 'Burger Station', with a baseball cap (signalling the North American origins of the production process) on her head monogrammed an ambiguous BS, and a simple uniform and name tag. This young woman is determined to be 'the best contact personnel' she can be, determined to give '110% effort!' She displays her commitment by an enthusiastic mantra 'Welcome to Burger Station! May I take your order?' **Figure 1 The Customer Service Relationship Begins** shows her first customer for the day; someone who is about to challenge her commitment to offering high quality service by ignoring her and talking on his cell phone.

Figure 1 The Customer Service Relationship Begins

Not only does the customer continue his telephone conversation, he irritates others waiting to be served in line behind him. The only response left for the Burger Station girl is to

plaintively repeat her request, 'Sir? Is there something I can get you?' In **Figure 2 The Plaintive Request** her consternation is shown with upturned eyebrows, in contrast to the customers waiting in line who have their eyebrows turned down in anger.

Figure 2 The Plaintive Request

These frames from the beginning of the story demonstrate the translation between cartoon characters and the larger archetypes that they represent. The female customer service representative (CSR) personifies an ideal fast-food service employee and is the heroine of the story; the person that the audience is asked to identify with the most. The male customer symbolises the selfish and hedonistic consumer and the waiting couple accentuates the power of the consumer over the CSR. The invisible presence of the standardised fast-food service management system pervades the comic strip through the uniform, name tag, menu board, and the employee's service script. The employee's emotional labour (Hochschild, 1983) is shown as she tries to make her feelings conform to her manager's expectations, and the customers' threats of complaint.

The cartoon continues to reinforce these themes in the next four frames, picking up on elements that were discussed in class. **Figure 3 Service Concepts Explored** investigates these themes where after a 17 minute wait [the psychology of waiting], the CSR finally asks the customer as politely as she can, to allow her to serve other customers [service encounter, emotional labour]. The customer retaliates by arrogantly refusing [dealing with difficult customers]. The other customers defect from the queue [queue management] and angrily blame the organisation for their poor experience [service perception and quality], and also swear to tell others about their encounter with this establishment [service recovery]. During this defection the original customer continues to talk and laugh his way through a phone call.

Figure 3 Service Concepts Explored

Another 15 minutes later the CSR is relieved that the customer has finally finished his phone call and is ready to be served, only to find that he now makes a completely unreasonable order, asking for items that do not exist on the menu board. In **Figure 4 Ordering**, the CSR attempts to explain that his desired options are not available at this restaurant. The customer, again, becomes angry that his needs are not being met.

Figure 4 Ordering

In the final frames (**Figure 5 Customer is King**) the customer becomes emotionally and psychologically like a wailing child. He reiterates his sovereignty: he is always right, and wants his hedonistic consumption needs met immediately. The CSR is required to manage her emotions by containing them in the face of the customer's hysterical outburst. As the customer throws a tantrum he becomes increasingly larger in his impotent fury at his inability to get what he wants. In reverse, the CSR becomes smaller and smaller, as she contains her emotions with clenched mouth and eyes, contrasted with the customer's wide cavernous mouth and angry verbal demands. The cartoon concludes with the CSR shaking with frustration, agitatedly containing her emotions as the customer slams the door on his way out, and she powerlessly claims 'What's a contact personnel to do?', clearly expressing a fundamental dilemma for the employee.

Figure 5 Customer is King

The unseen set of interests in this cartoon is the management system that is inherently present because of the threats of complaint that both sets of customers make. This threat makes the employee feel more vulnerable. The manager, though, is not physically present, but rather is metaphysically omnipresent. The CSR becomes smaller and smaller, not only in the face of the customers' tantrums, but in the expectation that her manager will be on the customers' side. Customers are, after all, also managers and purveyors of her service quality (Rosenthal, Peccei, & Hill, 2001) which is how her initial desire (to be the best contact personnel she can be) is to be judged. She is caught in the cross-fire of two sets of expectations: those placed on her by her invisible employer, and then the immediate presence and dominance of the customer in the service exchange. As a result she shakes with both contained emotion and trepidation as the unreasonable customer slams the door in the final frame.

Through parody, the question, 'What is a contact person to do?' is addressed to us the audience, and the value of the cartoon as an artistic artefact, and its wider themes become a discussion tool. The comic strip pulls the audience into the action through the code that promotes identification through laughter. Furthermore, its evident satirical tone makes it appealing. As an audience we resonate with what is pictured: the frustrations of waiting in line while other customers refuse to conform to queuing norms. Here we confront others' lack of social training in minimising time spent in the service interaction. But, our sympathies remain firmly with the CSR worker as the central figure and hero of the cartoon. As the under-dog, at the bottom of the organisational power structure, our empathy for her situation is accentuated. The consumer is revealed as being arrogant, selfish, hedonistic and generally stupid, and yet the entire performance of the organisation is judged by and through this consumer. The CSR is, paradoxically *everything* to the service interaction, and yet *nothing* at the same time. The consumer is ignorant of his power over her, and his bullying

arrogance (repeated to a lesser extent even by the waiting couple) is revealed as being erroneous, pompous and destructive.

The strip illustrates in many ways the process of compression and expression referred to in the beginnings to this paper. The students' spontaneous experiences of the fast-food encounters are fermented in this cartoon artefact. What however, are the implications that can be drawn from this case that facilitate a re-conception of artful practices in management development and education?

THE ARTFUL CLASSROOM

Dewey claims that art-making begins with daily experience, and the use of students' experiences as both customers and workers in a fast-food restaurant, is exploited in the fast-food comic strip as the context for the narrative. This context is appropriate for undergraduate cohorts because fast-food service is a very common role for students to hold while they are studying. According to Dewey, it is this kind of ordinary experience that forms the context for art making. The inner engagement with feelings and perceptions that spring from daily experiences are distilled into an artistic expression.

In our artful classrooms, when we work with experience and irony to foster creativity and critical thinking skills, we follow a process that evolves through several steps. Essentially a successful parody is introduced as being built around a sound understanding of a management text, typically the firmly established but often formulaic text which is a set reading. In addition to achieving a solid grasp of what the selected text *means*, students are invited to relate it to their own experiences and to discern in these lived experiences emotions and behaviours for which the formulaic text does not allow. Drawing on these experiences they try out the recipe provided, noting the aspects, angles and insights of their own recollection that do not fit, recording these disparities.

Being a service employee involves the deployment of emotional labour, and this process of creating an artistic product has encouraged these students to express the frustrations and dilemmas of their internal emotional life as workers. The students have reflexively engaged in the complexities of their work-lives by considering their experiences as both consumers and service workers, integrating these perceptions with the course concepts to express this

cartoon. In this way they turn everyday experience into an artefact. They make profound that which is commonplace, enabling us the audience to engage with their experience.

The two students who created the cartoon strip clearly have drawing and design skills, abilities that are not normally valued in an academic environment. In a discipline that privileges writing in black ink on a white page, rarely are business studies students asked to express themselves in diverse media. The skills of the visual artist or musician are often left untapped in classroom learning. In this particular Service Management class, other students chose to use digitally-oriented devices to compensate for their lack of formal artistic training. Hence movies recorded with domestic video cameras and visual narratives, created using cut-and-paste functions with standard computer software, were also used by class members.

Today's young people are growing up in an increasingly visual culture, and they absorb a great deal about narrative form and structure through their constant interactions with multimedia forms and popular culture. Although some critics may quibble that the cartoon used here works well because these students have artistic abilities that we cannot expect from management students, our experience has been that almost all students are able to represent their ideas through visual means in a variety of ways. Other examples using artful approaches include: students creating theatrical performances (see Sayers & Monin, 2007); storyboarding with photographs; animations; multimedia Power-point presentations; short movies; documentaries; short stories; and movie scripts.

Through artful facilitation, instructors can assist students to explore their latent talents and develop new skills by sharing published examples of visual, enacted and discursive workplace satires. The artful expressions the students create use the fully recognisable original (management) text, place them in an incongruous setting, juxtapose them with an unexpected other, or give the text ludicrously exaggerated features. These alterations, or re-readings of the original text, contort using salient aspects of the students' experiences. Students perceptively present their re-reading from a position of affirmation of their own experiences, and so are often able to present their new deepened understanding of the original text as being incomplete (perhaps sexist, naïve, condescending or irresponsible), with considerable confidence, wit and verve.

Fredric Jameson claims that ideology informs fictive texts by deploying real social contradictions, insurmountable in their own terms, so that these ideologies 'find a purely

formal resolution in the aesthetic realms' (Jameson, 1981, p. 79). The contradictions and ambiguities inherent in service are not only economic, but also emotional, moral and intellectual. These contradictions and ambiguities have been highlighted and explored in the literature *about* management which has sought to explore these complexities in more detail (for explorations see Korczynski, Shire, Frenkel, & Tam, 2000; Leidner, 1993; Sturdy, 1998), but these issues rarely, if ever, get mentioned in most service management texts. For example Korczynski and Ott (2004) maintain that capitalism is beset by a fundamental contradiction between rationalised, disciplined production co-existing with unconstrained and hedonistic consumption. They argue that, when managing the consumer, production both reinforces the customer's sovereignty, but at the same time directs them through rational systems of the service interaction (for instance the menu and its presentation, and a script service workers must follow) to act in certain ways conducive to appropriate rational acts within the system, thereby compromising that sovereignty. The comic strip produced by the students implicitly recognises this contradiction: the tension between rational production and individuated hedonistic consumption. The point of tension is the CSR who is pictured at the centre of this maelstrom of expectations, vividly illustrating the lived reality of a young fast-food worker.

Satire works with such contradictions, ambiguities and tensions. As it de-familiarizes the mundane it simultaneously exposes and challenges assumptions such as inherent power structures. In its alternative narrative it develops and reveals potentially multiple, as well as alternative views, an enlightenment that opens up the possibility of new, different and changing attitudes and values emerging from the artful classroom. It appeals to the reader on multiple levels, for our shared knowledge of the subject text invites complicity and the smugness of being *in the know*, while in the laughter generated by a humorous portrayal of incongruity, exaggeration and ignorance there is also persuasion to accept that this should not be so, that change should be accepted. Our laughing response leads us to acknowledge that the subject is in some ways lacking or ridiculous, and a combination of these outcomes, laughter and acknowledgement, leads us to accept, and identify with, the different view now revealed.

In our experience the performance of their texts is an exciting culmination of the class' artful learning. As audience, all of the class participate in the ironic reading process, penetrating between the lines of each other's creations and thereby generating the excitement, the energy

described by Dewey (1934) that is central to artistic engagement. So it is essential that the instructor create the space within which expression can occur. If the classroom is fully dialogic then not only are both instructors and students learning at the same time – as emerges from the unique and often spontaneous conversations that occur – but also as each individual courageously takes up the position that emerges from a synthesis of their experience, emotion and reflection, they must also try to grasp positionings alternative to their own.

This demands commitment from both instructors and students, and the introduction of this artful assignment offered an opportunity to enliven management learning that is more often static in its concepts and epistemologies. The key ideas of service management are trotted out in text upon text: with little variation of the *key steps to success* in customer service management. Such texts are formulaic, and much writing that is interesting and provocative about service management is rarely, if ever, acknowledged and referred to in them. In classrooms where the development of critical thinking skills is a declared aim, the ability to speak to such established theories in an ironic voice is demonstrably valuable, for it provides us with a succinct way of demonstrating knowledge of the dominant story, with all of its inbuilt assumptions, as well as providing an ever-present, alternative and divergent narrative.

One of the dialogic strengths of incorporating irony into the classroom learning experience is that interpretive outcomes are created by a combination of both the depth and diversity of thoughtful reception. As a general rule we have found that the more subtle the irony in the artwork, the more pressing is the need for readers to creatively respond – to *write* the unwritten story that the written story suggests – and that sharing these many individual interpretations in group discussions enriches all.

An artful teaching approach, then, requires an acceptance of both the critical and the prescriptive, and a working knowledge of a complex body of theory and practice. There is resistance between the two, but an artful approach welcomes this ambiguity.
