ABSTRACT

Stimuli Sensitive Polysaccharide Based Hydrogels as Colon Targeted Drug Delivery Vehicles.

By Iman Kavianinia

Supervised by Professor David R.K. Harding ^a, Associate Professor Paul G. Plieger ^a
and Professor Nadia G. Kandile ^b

^a Institute of Fundamental Sciences, College of Sciences,
Massey University, Palmerston North.

^b Department of Chemistry, Faculty for Women, Ain Shams University, Heliopolis,
Cairo, Egypt

Administering drugs orally is by far the most widely used route of administration that will help eliminate the pain caused by injection, psychological barriers associated with multiple daily injections and possible infection from injection sites. However, it is important for oral drug administration to overcome several different obstacles during the delivery through the gastrointestinal tract. The barriers can be morphological barriers and physiological factors such as a wide range of pH and enzymatic activities. The lower water content and fluid mobility of the colon, which leads to longer retention times and also lower proteolytic activity of colon compared to other areas of the gastrointestinal tract, make the colon an ideal site for both systemic and local delivery of drugs. Therefore aggressive research efforts have recently focused on development of new strategies for delivering drugs to the colon.

As a drug delivery systems, hydrogels have received increasing attention due to their outstanding merits. Among the various hydrogels, including natural, synthetic and natural/synthetic hybrid hydrogels, chitosan has attracted significant attention in a broad

range of pharmaceutical and biomedical applications. Chitosan is a hydrophilic polyelectrolyte heteropolysaccharide composed of randomly (1→4)-linked 2-acetamido-2-deoxy-β-D-glucopyranose and 2-amino-2-deoxy-β-D-glucopyranose linked by (1→4)-β-glycosidic bonds. Unlike most known bioadhesive polymers, chitosan displays unique pharmaceutical and biomedical applications due to the large number of hydroxy and amino groups on the backbone of chitosan. These functional groups can be readily modified. This study was commenced with the aim of engineering a carrier with high enough physicochemical stability to reach the colon and to be able to protect a drug from various obstacles throughout the gastrointestinal tract. In this study, a new generation of chitosan derivatives was developed. Furthermore, their viability was investigated for potential applications as drug carriers to the colon. Chitosan based films with improved physical properties from introducing a cyclic imide moiety into the chitosan matrices was developed and characterised. Mechanical, thermal and chemical analyses of these films show that the heterocyclic imide linkage imparts excellent thermal, mechanical and chemical stability to the chitosan film. Additionally, spray dried chitosan microspheres with improved mechanical stability were examined for the controlled drug release of bovine serum albumin as a model protein drug. Additionally, a novel generation of amphoteric crosslinked chitosan derivatives was designed to be pH sensitive and bacterially degradable. Tableted carriers were designed to protect the drug from the harsh acidic environment of the stomach and the rigorous enzymic activity of the small intestine and deliver the drug to the colon. Tableted formulation forms of these novel amphoteric derivatives of chitosan showed the excellent potential formulations as colon specific drug delivery vehicles.

ACKNOWLEDGEMENTS

The study described in this thesis was carried out at the Department of Chemistry and at the Institute of Fundamental Science (IFS), Massey University, New Zealand.

I would like to express my sincere appreciation to my chief supervisor, Professor David R.K. Harding, for accepting me as a student and providing all kinds of support throughout my graduate years. His enthusiasm, passion and encouragement will definitely influence my career. His valuable advice, from professional to personal levels, will never be forgotten. I am very grateful to have had the opportunity to learn under his guidance.

I would like to thank my co-supervisors Associate Professor Paul G. Plieger and Professor Nadia G Kandile for all their guidance throughout the length of this project. I cannot thank you enough for all your unlimited support and encouragement, and for all the productive discussions.

I would also like to thank Mr. David Lun for all the technical support and assistance with the initial training on the HPLC, MALDI and ESI-MS. I would also like to pass my gratitude to Dr Pat Edwards for his help when using the NMR and advice for structural analysis. I also wish to thank Dr Jason Hindmarsh, Institute of Food, Nutrition & Human Health, Massey University, for his assistance and providing access to the solid-state NMR spectrometer. I am also very thankful to Professor Geoff Jameson, for helping me carry out the X-ray analysis and for his voluble assistance in interpreting the results. I would like to thank my office mate Dr. Olekile Tibe, for his friendship, discussions, cooperation and support.

I would like to show my gratitude and sincerest thankfulness to Dr. Nick Cave and his research group members, Dr Magda Dunowska and Mrs Gaya Gopakumar, Institute of Veterinary, Animal & Biomedical Sciences.

I thank all the members of IFS for all the friendship and for making my days more cheerful and also for the funding me to attend conferences in Spain and Australia.

Finally, I wish to extend a big thank you to my family for their continuous support throughout project, you are my sources of strength and inspiration.

Chapter One: Introduction

1.0 Hydrogel	1
1.1 Classifications of hydrogels	2
1.1.1 According to source	2
1.1.1.1 Natural hydrogels	
1.1.1.2 Synthetic hydrogels	
1.1.1.3 Hybrid hydrogels	
1.1.2 According to the method of preparation	4
1.1.2.1 Homopolymers	
1.1.2.2 Copolymers	
1.1.2.3 Interpenetrating polymer network hydrogels	
1.1.3 According to ionic charge.....	4
1.1.3.1 Non-ionic hydrogels	
1.1.3.2 Ionic hydrogels	
1.1.3.3 Ampholytic Hydrogels	
1.1.4 According to the biodegradability.....	5
1.1.4.1 Biodegradable hydrogels	
1.1.4.2 Non-biodegradable hydrogels	
1.1.4.3 Ampholytic Hydrogels	
1.1.5 According to method of crosslinking	6
1.1.5.1 Physically crosslinked hydrogels	
1.1.5.2 Chemically crosslinked hydrogels	
1.1.6 According to physical properties	7
1.1.6.1 Conventional hydrogels	
1.1.6.2 Stimuli responsive hydrogels “Smart hydrogels”	

1.2 Stimuli responsive hydrogel classification	8
1.2.1 Chemical responsive hydrogels.....	8
1.2.1.1 pH responsive hydrogels	
1.2.1.2 Glucose responsive hydrogels	
1.2.2 Physical responsive hydrogels	10
1.2.2.1 Pressure responsive hydrogels	
1.2.2.2 Temperature responsive hydrogels	
1.2.2.3 Ultrasound responsive hydrogels	
1.2.2.3 Field responsive hydrogels	
1.2.2.3 Light responsive hydrogels	
1.2.3 Biochemically responsive hydrogels	12
1.2.3.1 Antigen responsive hydrogels	
1.2.3.2 Enzyme responsive hydrogels	
1.1.3.3 Ultrasound responsive hydrogels	
1.1.3.3 Field responsive hydrogels	
1.1.3.3 Light responsive hydrogels	
1.3 Biomedical applications of stimuli-responsive hydrogels	13
1.3.1 Applications of hydrogels in tissue engineering	13
1.3.2 Applications of hydrogels in wound healing	14
1.3.3 Applications of hydrogels in drug delivery	15
1.3.3.1 Ocular drug delivery	
1.3.3.2 Rectal drug delivery	
1.3.3.3 Subcutaneous delivery	
1.3.3.4 Transdermal delivery	
1.3.3.5 Oral drug delivery	
1.4 Site specific drug delivery	20
1.4 Human gastrointestinal physiology	20
1.5.1 Anatomy and physiology of the stomach	21
1.5.2 Anatomy and physiology of the small intestine	22
1.5.3 Anatomy and physiology of the large intestine.....	22
1.6 Colon specific drug delivery	24
1.6.1 Anatomy and physiology of colon	25
1.6.2 Factors affecting in the design of colon-specific drug delivery system	25

Chapter Two: Preparation and characterization of crosslinked Chitosan based films with excellent physiochemical properties

2.0 Introduction	77
2.1 Materials and Methods	78
2.1.1 Materials	78
2.1.2 Preparation and crosslinking of the polymeric films.....	79
2.2. Characterization of the crosslinked films	79
2.2.1 Fourier transform infrared (FTIR) spectroscopy.....	79
2.2.2 Nuclear magnetic resonance (NMR) spectroscopy	79
2.2.3 Determination of the degree of substitution.....	80
2.2.4 Swelling studies.....	80
2.2.5 Film thickness	81
2.2.6 CHN elemental analysis	81
2.2.7 Mechanical test.....	82
2.2.8 Thermal gravimetric analysis (TGA) and differential thermal gravimetric analysis (DTG)	82
2.2.9 In vitro biodegradation study	82
2.2.10 Contact angle analysis	82
2.3 Results and discussion	77
2.3.1 The degree of substitution.....	82
2.3.2 Fourier Transform Infrared (FTIR) Spectroscopy	85
2.3.3 Mechanical testing.....	86
2.3.4 Swelling studies.....	87
2.3.5 Solid state ¹³ C NMR analysis	89
2.3.6 In vitro biodegradability	90
2.3.7 Thermal gravimetric analysis (TGA) and differential thermal gravimetric analysis (DTG)	91
2.3.8 Water Contact Angle Measurements.....	93
2.4 Conclusion	94
2.5 References	95

Chapter Three: In vitro evaluation of spray-dried chitosan microspheres cross-linked with pyromellitic dianhydride for oral colon-specific delivery of protein drugs

3.0 Introduction	99
3.1 Materials and Methods	100
3.1.1 Materials	100
3.1.2 Preparation of the spray-dried chitosan microspheres	100
3.1.3 Crosslinking of the spray-dried chitosan microspheres.....	101
3.2. Characterization	101
3.3. Determination of the swelling behavior of the microparticles	102
3.4. BSA loading and release experiments	102
3.4.1 Protein encapsulation efficiency and loading capacity	102
3.4.2 In vitro drug-release study.....	103
3.5. HPLC protein analysis	103
3.6. Statistics	104
3.7 Results and discussion	104
3.7.1 Preparation of the spray-dried chitosan microspheres	104
3.7.2 Swelling studies	108
3.7.3 Microsphere encapsulation efficiency (EE) and loading capacity (LC) study	109
3.7.4 In vitro release study	111
3.8 Conclusion	114
3.9 References	115

Chapter Four: Synthesis and characterization of a novel generation of amphoteric pH sensitive hydrogels

4.0 Introduction	119
4.1 Materials and Methods	120
4.1.1 Materials	120
4.1.2 Preparation of chitosan films	121
4.1.3 Preparation of amic acid derivatives	121
4.1.4 Preparation of crosslinked chitosan films.....	121
4.2. Enzyme inhibitory effect	121
4.2.1 Trypsin inhibition study.....	122

4.2.2 Chymotrypsin inhibition study.....	122
4.3 Results and discussion.....	122
4.3.1 Preparation of chitosan amic acid films.....	122
4.3.2 Fourier transform infrared (FTIR) spectroscopy.....	125
4.3.3 Solid state ¹³ C NMR analysis	126
4.3.4 Mechanical test.....	127
4.3.5 Thermal gravimetric analysis (TGA) and differential thermal gravimetric analysis (DTG)	128
4.3.6 Swelling studies.....	129
4.3.7 Water contact angle measurements	130
4.3.8 In vitro biodegradability	131
4.3.9 Enzyme inhibitory effect	132
4.4 Conclusion	133
4.5 References.....	134

Chapter Five: Development of a pH sensitive carrier system based on a novel water soluble chitosan and alginate for colon targeted drug delivery

5.0 Introduction.....	137
5.1 Experimental	138
5.1.1 Materials	138
5.1.2 Preparation of Cts-TMAC amic acid (CTAA).....	138
5.1.3 Preparation of CTAA amic acid (CTAA) film	138
5.2. Characterization of the CTAA amic acid (CTAA) film	139
5.2.1 NMR spectroscopy	139
5.2.2 X-ray diffraction (XRD)	139
5.2.3 Scanning electron microscope.....	139
5.2.4 Solubility test	140
5.3. Preparation of CTAA/alginate film	140
5.4. Swelling studies of CTAA/alginate films	140
5.5. Release profile of 5-fluorouracil (5-FU) from CTAA/alginate films	141
5.6. HPLC analysis	141
5.7. Cell cultures.....	141

5.8. Cytotoxicity test	142
5.9 Results and discussion	143
5.9.1 Preparation of CTAA	143
5.9.2 Characterization of the chitosan derivative	143
5.9.3 Thermal gravimetric analysis (TGA) and differential thermal gravimetric analysis (DTG)	148
5.9.4 Enzyme inhibitory effect of CTAA.....	149
5.9.5 Solubility test	150
5.9.6 Swelling studies of CTAA/alginate films.....	150
5.9.7 In vitro drug release study	152
5.9.7.1 Effect of pH of media on release profile of 5-FU from CTAA/alginate films	
5.9.7.2 Effect of enzyme on release profile of 5-FU from CTAA/alginate films	
5.9.8 Cytotoxicity studies	156
5.10 Conclusion	156
5.11 References	157

Chapter Six: Formulation and evaluation of pH and enzyme controlled colon specific delivery system using novel amphoteric chitosan based matrix tablet.

6.0 Introduction	160
6.1 Materials and Methods	161
6.1.1 Materials	161
6.1.2 Preparation of Amic acid derivatives	161
6.2. Characterization of the hydrogel	162
6.3. Preparation and evaluation of tablets	162
6.3.1 Preparation of compression-coated tablets	162
6.3.2 Tablet crushing strength	162
6.3.3 Swelling behaviour of tablets.....	163
6.3.4 Tablet erosion study	163
6.3.5 Enzymatic degradation study of tablets.....	163
6.4. In vitro drug release study	164
6.5. HPLC analysis	165
6.5.1 ASA determination.....	165

6.5.2	BSA determination	165
6.6.	Results and discussion	165
6.6.1	Preparation of chitosan amic acid derivatives.....	166
6.6.2	Characterization	168
6.6.3	Enzyme inhibitory effect of CBAA.....	176
6.6.4	Swelling and erosion behaviour tablets	176
6.6.4.1	Cts-CBAA (75:25%)	
6.6.4.2	Cts-COAA (75:25%)	
6.6.5	Enzymatic degradation of tablet.....	185
6.6.6	In vitro drug release study	185
6.6.6.1	Controlled colon specific delivery system of 5-ASA using Cts:CBAA tablet	
6.6.6.1.1	Effect of coating polymer ratio	
6.6.6.1.2	Effect of pH and enzyme	
6.6.6.2	Colon specific delivery of protein therapeutics using Cts:COAA tablet	
6.6.6.2.1	Effect of coating polymer ratio	
6.6.6.2.2	Effect of pH and enzyme	
6.6.7	Cytotoxicity studies	194
6.7.	Conclusion	195
6.8	References.....	195

Chapter Seven: Development and evaluation of a novel colon targeting drug delivery system for the treatment of Tritrichomonas foetus intestinal infection in cats

7.0	Introduction.....	199
7.1	Materials and Methods	200
7.1.1	Materials	200
7.1.2	Preparation of Cts-PMDA amic acid (CPAA).....	200
7.1.3	Swelling behaviour of the tablets	200
7.1.4	Tablets erosion study.....	202
7.1.5	In vitro drug release study	202
7.1.6	HPLC analysis.....	202
7.2.	Results and discussion	203
7.2.1	Preparation of CPAA.....	203
7.2.2	Characterization	203
7.2.2.1	Fourier transform infrared (FTIR) spectroscopy	

7.2.2.2	Nuclear magnetic resonance (NMR) spectroscopy	
7.2.2.3	Scanning electron microscopy (SEM)	
7.2.2.4	Powder X-ray diffraction study	
7.2.2.5	Thermogravimetric analysis (TGA)	
7.2.2.6	Enzyme inhibitory effect of CPAA	
7.2.2.7	Swelling and erosion behaviour of Cts:CPAA tablets	
7.2.2.8	Enzymatic degradation study	
7.2.2.9	Swelling and erosion behaviour of Cts:CPAA tablets	
7.2.3	In vitro drug release study	203
7.2.3.1	Effect of coating polymer ratio	
7.2.3.2	Effect of pH and enzyme	
7.2.4	Cytotoxicity studies	203
7.3.	Conclusion	216
7.4	References.....	216

Chapter Eight: Summary and possible future directions

Figure 7-1 Reaction illustration and FTIR spectra of crosslinked chitosan with PMDA a) at 130 °C b) at room temperature.....	203
Figure 7-2 13C DP-MAS spectra of (a) Cts and (b) CPAA.....	204
Figure 7-3 SEM image of (a) Cts and (b) CPAA.....	205
Figure 7-4 2D-XRD of (a) Cts, (b) CPAA.....	206
Figure 7-5 TGA and DTG thermograms of Cts and CPAA.....	207
Figure 7-6 Photographs of the radial and axial swelling behaviour of the Cts:CPAA (75:25%) tablet in different pH media.....	208
Figure 7-7 Swelling behaviour of Cts:CPAA (75:25%) tablets in a) pH 1.5, b) pH 6.5 and c) pH 5.5.....	209
Figure 7-8 Photographs of radial and axial swelling behaviour of tablets in a simulated GIT of a cat..	210
Figure 7-9 Swelling behaviour of Cts:CPAA (75:25 %) tablets in a simulated gastrointestinal tract..	210
Figure 7-10 Percentages remaining of Cts:CPAA (75:25 %) matrix tablets a) 24 h in pH 1.2, 6.5,5.5 b) in a simulated gastrointestinal tract (30 min in pH 1.5 followed by 2 h in pH 6.5 then 24 h in pH 5.5). ..	211
Figure 7-11 Effect of enzyme on cumulative release of ronidazole from the Cts:CPAA (75:25 %)	214
Figure 7-12 Percent viability of cells incubated with tested compounds as compared to control cells. .	215

LIST OF ABBREVIATIONS

AAm	Acrylamide
5-ASA	5-aminosalicylic acid
BSA	Bovine serum albumin
BAPNA	N- α -benzoyl-L-arginine p-nitroanilide
BTEE	N-benzoyl-L-tyrosine ethyl ester solution
BTDA	Benzophenone-3,3',4,4'-tetracarboxylic dianhydride
CF	Carboxyfluorescein
Cts	Chitosan
CST	Critical solution temperature
CFU	Colony forming unit
CBAA	Amic acid derivative chitosan crosslinked with BTDA
CFAA	Amic acid derivative chitosan crosslinked with FDA
CNAA	Amic acid derivative chitosan crosslinked with NTDA
COAA	Amic acid derivative chitosan crosslinked with ODP
CPAA	Amic acid derivative chitosan crosslinked with PMDA
CTAA	Amic acid derivative chitosan crosslinked with TMAC
DD	Degree of deacetylation
DMF	Dimethylformamide
DD	Degree of deacetylation
DTG	Differential thermal gravimetric analysis
Da	Dalton
EC	Ethylcellulose
Ea	Electron affinity
EVAC	Ethylenevinyl acetate copolymer
EE	Encapsulation efficiency
ppm	Parts per million
EVAC	Ethylene dimethacrylate
FDA	4,4'-(Hexafluoroisopropylidene) diphthalic anhydride
5-FU	5-Fluorouracil
FTIR	Fourier transform infrared spectroscopy

GIS	Gastrointestinal system
GIT	Gastrointestinal tract
GA	Glutaraldehyde
g	Gram
HCl	Hydrochloric acid
HPLC	High-performance liquid chromatography
HEMA	Hydroxyethylmethacrylate
HPMA	Hydroxypropylmethacrylate
IBD	Inflammatory bowel disease
LCST	Lower critical solution temperature
LC	Loading capacity
LD	Lethal dose
LYZ	Lysozyme
MPEG	Methoxyl poly(ethylene glycol)
M_w	Molecular weight
MAS	Magic angle spinning
MHz	Megahertz
MPa	Megapascal
NTDA	1, 4, 5, 8-Naphthalenetetracarboxylic dianhydride
NaCS	Sodium cellulose sulfite
NMR	Nuclear magnetic resonance spectroscopy
ODPA	4,4'-Oxydiphthalic dianhydride
PBS	Phosphate buffered saline
PAA	Poly (acrylic acid)
PMAAc	Poly (methacrylic acid)
PDMAEMA	Poly (N,N'-dimethylaminoethyl methacrylate)
PL	Poly (lysine)
PHEMA	Poly (2-Hydroxyethyl methacrylate)
PEG	Poly (ethylene glycol)
PNIPAm	Poly (N-isopropylacrylamide)
PEO	Polyethylene oxide
PS	Puncture strength
PEGMA	Polyethyleneglycol methacrylate
PNPAm	Poly (N-n-propylacrylamide)

PDEAM	Poly (N,N-diethylacrylamide)
PVA	Polyvinylalcohol
pH	Measure of acidity and basicity in solution
PPS	Sodium polyphosphate
PMDA	Pyromellitic dianhydride
RDZ	Ronidazole
RPM	Revolutions per minute
SCF	Simulated colonic fluid
SEM	Scanning electron microscopy
S %	Swelling percentage
SGF	Simulated gastric fluids
SIF	Simulate gastric fluids
T. foetus	Tritrichomonas foetus
TGA	Thermal gravimetric analysis
TMAC	Trimellitic anhydride chloride
UC	Ulcerative colitis
UCST	Upper critical solution temperature
XRD	X-ray diffraction

LIST OF PUBLICATIONS

1. **Kavianinia, I.**; Plieger, P. G.; Kandile, N. G.; Harding, D. R., In Vitro Evaluation of Spray-Dried Chitosan Microspheres Crosslinked with Pyromellitic Dianhydride for Oral Colon-Specific Delivery of Protein Drugs. *Article first published online*: 13 Feb **2013**.
2. **Kavianinia, I.**; Plieger, P. G.; Kandile, N. G.; Harding, D. R., Preparation and characterization of crosslinked chitosan based films with excellent physiochemical propertie. *International Journal of Biological Macromolecules*. Manuscript under revision.
3. **Kavianinia, I.**; Plieger, P. G.; Kandile, N. G.; Harding, D. R., Fixed-bed column studies on a modified chitosan hydrogel for detoxification of aqueous solutions from copper (II). *Carbohydrate Polymers*. **2012**, 90 (2), 875–886.
4. **Kavianinia, I.**; Plieger, P. G.; Kandile, N. G.; Harding, D. R., New hydrogels based on symmetrical aromatic anhydrides: Synthesis, characterization and metal ion adsorption evaluation, *Carbohydrate Polymers*. **2012**, 87 (1), 881–893.

Papers to be submitted

1. Development of a pH sensitive carrier system based on a novel water soluble chitosan and alginate for colon targeted drug delivery. *Under preparation*
2. Development and evaluation of a novel colon targeting drug delivery system for the treatment of *Tritrichomonas foetus* intestinal infection in cats. *Under preparation*
3. Synthesis and characterization of a novel generation of amphoteric pH sensitive hydrogels. *Under preparation*

4. Formulation and evaluation of a novel pH and enzyme controlled colon-specific delivery system of 5-ASA using amphoteric chitosan based matrix tablet. *Under preparation.*

5. Preparation and characterization of an amphoteric chitosan based matrix table chitosan based matrix tablet for oral colon-specific drug delivery of protein therapeutics. *Under preparation.*
