Information Technology in Pre-service Teacher Education within a New Zealand College of Education

A thesis presented in partial fulfilment of the requirements for the degree of Master of Education at Massey University

> Anthony Neil Hunt 2000

Abstract

This thesis examines the use of Information Technology (IT) by lecturers and preservice student teachers at the Auckland College of Education to provide a basis for future development of policy and programmes.

The concept of IT is examined and the term defined in terms of a broad range of artefacts, knowledge and skills which includes the use of computers, but also other technologies for handling and storing information. Information skills are also identified as being an important component of IT. The development of IT use in preservice teacher education is examined in New Zealand, and for comparison in the United Kingdom, the U.S.A. and Australia. The survey demonstrates that the place of IT in pre-service teacher education was originally ignored by education authorities in those countries in favour of in-service teacher education, but in recent years has has become the subject of official concern and, overseas, action. The establishment of goals and standards for pre-service IT teacher education is one reflection of this concern in a number of countries.

The literature indicates a number of issues that need to be addressed if pre-service teacher education institutions are to successfully prepare teachers to work in IT-enhanced schools. These include the development of teacher education programmes which integrate IT and emphasise its pedagogical use, the provision of adequate IT teaching experience for student teachers, the provision of resources and staff development for teacher educators.

A survey of lecturers, first and final year primary student teachers, and graduating secondary student teachers indicates that, while all groups have a high degree of access to computers and many have basis skills in using software, the use of computers and other information technologies within the College curriculum is limited. All groups believe that skills in using IT are important for beginning teachers but most lecturers do not model its use or teach its use in schools. Students have limited experience in using IT during practicum sessions, and lecturers, themselves, have limited practical experience of IT in education. The importance of strategies indicated by the literature for improving this aspect of pre-service teacher education is supported by the findings of the research. The various factors identified as influencing pre-service teacher education are summarised in a model which draws attention to the different sites in which students develop a range of skills, knowledge and attitudes, all of which affect their understanding and capacity to use IT in their teaching roles.

In the light of these findings, and the absence of any previous New Zealand research in this area, the study identifies areas where there is a need for further research. It is argued that such research is urgently needed in view of growing concern at the ineffectiveness of pre-service teacher education in this area.

Acknowledgments

I would like to acknowledge the support of the administration, teaching staff and students of the Auckland College of Education during this research and the contribution of Rudi Petersen in entering the data..

In addition, it would not have been possible without the support of my family who enabled it be completed, and Bryan Tuck who taught me about reality and whose advice and support was inestimable.

Chapter 1: Review of the Literature1
Introduction
Information Technology1
IT in schools
IT in pre-service teacher education in UK, USA, Australia and New Zealand 11
United Kingdom 12
United States15
Australia21
New Zealand24
Issues in IT and teacher education
Goals & standards
Attitudes & experience of student teachers to IT
Skills and knowledge of lecturers
The location of IT in pre-service teacher education programmes
Integration or stand-alone courses?
Teaching experience
Resources
Need for further research on IT in New Zealand pre-service teacher education 54
Chapter 2: The Method
The Participants
Procedure
Analysis of data
Ethical issues
Chapter 3: Results
Use of Computers
Access and ownership65
Use of Information Technology by lecturers 69
Internet and electronic mail access 69
Computers in teaching and learning72
Student experiences of IT within the College74
Confidence in using information technology 85
Beliefs about the IT needs of the Beginning Teacher
Comparison between categories for aspects of IT grouped by function
Chapter 4: Discussion
Introduction
College lecturers and IT
Lecturers' use of IT
Lecturers' modelling of IT use
Student teachers and IT
Students' use of IT

Teaching experience	
Comparison of secondary and primary students	100
Course structure and design	103
Alternative teaching methods using IT	103
Developing students' skills in teaching with IT	104
Limitations of the study	109
Summary	111
Chapter 5: Conclusion and Implications	113
Introduction	
Implications for Teacher Education Practice	113
Pre-service teacher education programmes	113
Staff development	120
Recommendations for further research	123
