THE IMPACT OF DYSFUNCTIONAL RELATIONSHIP BELIEFS ON MARITAL SATISFACTION: COMPARISON OF CLINICAL AND NON-CLINICAL SAMPLES

A thesis presented in partial fulfilment of the requirements for the degree of Master of Arts in Psychology

Jan Dickson

1996

ABSTRACT

Cognitive components of marital distress have been examined in the past decade, but few studies to date have focused on relationship beliefs. The present study is a partial replication of Eidelson and Epstein's (1982) evaluation of the Relationship Belief Inventory, a questionnaire developed by them to assess dysfunctional relationship beliefs. Participants comprised ninety men and ninety-two women (including 90 couples) drawn from both clinical and non-clinical settings. They completed questionnaires which included demographic data, the Relationship Belief Inventory (Eidelson & Epstein, 1982) and the Dyadic Adjustment Scale (Spanier, 1976), a commonly used measure of marital satisfaction. Comparisons were made between responses from clinical and non-clinical groups, between men and women, and between partners. A multiple regression analysis was performed to determine whether specific beliefs represented by the Relationship Belief Inventory were predictive of low levels of marital satisfaction. The results indicated that a belief that disagreement is destructive to a relationship was consistently related to low levels of marital satisfaction. Participants in the clinical group had significantly higher scores on this belief than the non-clinical group, and in the multiple regression equation, this belief was a unique predictor of reduced Men were found to hold the belief that sexual marital satisfaction. perfectionism is important with greater intensity than women. The findings are discussed in terms of their implications for marital therapy.

ACKNOWLEDGEMENTS

I am grateful to my supervisor, Dr Frank Deane, for his efforts in keeping me on track, and his patience during the data analysis phase of this project. In particular, I wish to thank him for being consistently cheerful, especially when I wasn't!

Special thanks are due to my lovely Doug for his unstinting love and support, his practical assistance (creating the research displays and helping to set them up in various parts of the country), and for faithfully keeping the meals coming! Thanks also to our wonderful offspring for their words of encouragement over the years I have been studying.

To my dear friends, who have offered so much moral support (providing a sympathetic ear) and practical help (distributing questionnaires, proofreading, help with SPSS) over the past eighteen months. Fiona, Toos and Frances, I really appreciate you!

I am especially grateful to all those people who took the time to complete and return the questionnaires - this study is for you. Thank you also to the people who helped in various locations: staff of Relationship Services offices and Te Aroha Noa; Gerard and the staff at Ezi-Buy; relationship counsellors working in private practice; members of the Manawatu Vintage Car Club and Alvis Car Club, and Carolyn Smith from Parent Centre.
