Axilla Crutch - A Case Study**

**A thesis presented in partial fulfilment of
the requirements for the degree of Master
of Technology in Product Development at
Massey University**

PERCIVAL BRENT CHALLIS

1990

ABSTRACT

The application of product development in the area of designing equipment for people with disabilities was studied using, as a case study, the development of a new design of axilla crutch.

From the literature available it became apparent that very little work on the product development process has been carried out within this industry. This situation exists side by side with, and may be strongly related to, a dearth of basic information on the market requirements and size for the equipment currently being used.

To overcome this problem for the case study a questionnaire was used to provide basic information for the axilla crutch. This was supplemented by a literature search which provided some information as to the essential operation of the equipment. This information provided the basis for the design of the new axilla crutch which was then field trialled.

From the results of the work carried out, it can be seen that the product development process in the disability sector is essentially the same as in other areas. The difference comes in the emphasis that needs to be applied to the initial market research and functional definition of the equipment, and the final assessment of the prototype.

ACKNOWLEDGEMENTS

I would like to take the opportunity to thank the following people for their assistance with my work:

- Professor Terry Cunniffe and Dr Brian Howard for their supervision.
- Dr Mary Earle for her guidance and assistance.
- Mr Byron McKillop for his assistance with the design and construction of the prototype.
- Mr Lee Anderson for his assistance with the construction of the prototype and information on the various production techniques.
- Mr Doug Hankin for his initial field testing of the prototype and his very useful feedback.
- The Medical Ethics Committee and staff of the Accident and Emergency Department of the Palmerston North Hospital for their assistance in the field trials.
- Mr Kelvin Lord for his assistance with the concepts of Patent protection.
- Ms Susanne Dwyer for her assistance with the layout.
- My wife, Sharon, for her patience and assistance with the making of the covers for the axilla piece.

Table of Contents

ABSTRACT	i
ACKNOWLEDGEMENTS	ii
TABLE OF CONTENTS	iii
✓1. INTRODUCTION	1
1.1. Products	1
1.2. The Product Development Process	2
1.3. Variation for the Disability Sector	3
1.4. Historical Perspective on Equipment for People with Disabilities	5
1.5. Aims of the Project	8
2. BACKGROUND ON PRODUCT DEVELOPMENT	10
2.1. The History of Product Development	10
2.2. Product Development in the Disability Sector	14
2.3. Product Development Plan for the axilla crutch	15
3. THE PRELIMINARY CONSUMER STUDY FOR THE AXILLA CRUTCH	17
3.1. Product Idea	17
3.2. Methods of Surveying the Market	17
3.2.1. Secondary Data, Advantages and Disadvantages	18
3.2.2. Primary Data, Advantages and Disadvantages	19
3.2.2.1. Observation	19
3.2.2.2. Communication	20
3.3. Secondary Data Gathered on Walking Aids	23
3.4. Primary Data Collection on axilla crutches	25
3.4.1. Survey Plan	25
3.4.2. Survey Method Selection for the Project	25
3.4.3. The Target Group	27
3.4.4. Data Collection and Returns	28
3.4.5. Processing the Data	28
3.4.6. Results of the Survey	29

3.4.6.1. User Group	29
3.4.6.2. Physical Characteristics of User Group	30
3.4.6.3. Use and Reasons for Use of Crutches	31
3.4.6.4. Design of Crutches	32
3.4.6.5. General	33
3.5. Product Concept	33
4. PROTOTYPE DESIGN	34
4.1. Historical Use of Crutches	34
4.2. Product Design Specification	34
4.3. Existing Designs	35
4.4. Literature Search	37
4.5. Dimensions	37
4.6. Prototype Designs	39
4.7. Theoretical Evaluation	42
4.8. Locking Bung Design	44
4.8.1. Testing of Locking Bung Concept	46
4.8.2. Results of the Bung Compression Test	47
4.8.3. Conclusion of Bung Design	48
4.8.4. Prototype Locking Bung Design	48
5. PROTOTYPE MECHANICAL TESTING	51
5.1. Pre-Test Preparation	51
5.2. Cyclic Loading Test	51
5.3. Impact Loading Test	51
5.4. Results	52
6. HUMAN FACTORS TESTING OF PROTOTYPE	53
6.1. Stage 1	53
6.2. Stage 2	53
6.3. Results of the Field Trials with Long Term User	54
6.4. Results of the Field Trial with Short Term Users	55
7. DISCUSSION	57

7.1. The product development process for the axilla crutch	57
7.1.1. Standards for Walking Aids.	58
7.1.2. Product Idea	58
7.1.3. Literature Survey	58
7.1.4. Technical Requirements.	59
7.1.5. Market Survey	59
7.1.6. Product Concept	59
7.1.7. Product Design Specifications	59
7.1.8. Product Constraints	59
7.1.9. Prototype Design	59
7.1.10. Theoretical Evaluation	60
7.1.11. Prototype Construction	60
7.1.12. Prototype Evaluation	60
7.2. The axilla crutch	60
8. CONCLUSION	63
BIBLIOGRAPHY	64
APPENDICES	
A. Walking Aids Questionnaire	68
B. Excerpts from New Zealand Standard for Axilla Crutches	71
C. Submission to Medical Ethics Committee	73
LIST OF TABLES	
1. Total number of crutches issued in 1986	28
2. Size needs for crutches	30
3. Axilla piece usage	31
4. Design considerations for the axilla crutch	32
5. General requirements for the axilla crutch	33
6. Body dimensions (Diffrient et al)	38
7. Basic dimensions of crutch	39
8. Stress calculations for standard tubes	43

9. Bung movement versus applied force	47
10. Pre and post test measurements	52

LIST OF FIGURES

1. Product development (Twiss)	2
