BOUNDS ON THE ARITHMETIC DEGREE

A THESIS PRESENTED IN PARTIAL FULFILMENT
OF THE REQUIREMENTS FOR
THE DEGREE OF MASTER OF SCIENCE IN
MATHEMATICS AT
MASSEY UNIVERSITY

Thomasin Ann Smith

1996

Abstract

In this thesis we study the arithmetic degree theory of polynomial ideals. The main objectives are: (i) to show whether we can generalize a lower bound on the arithmetic degree of monomial ideals to the arithmetic degree of arbitrary homogeneous ideals; and (ii) to explain whether some known bounds for the geometric degree can be restated in terms of bounds on the arithmetic degree. We give a negative answer to all questions raised by constructing counterexamples. In some cases we provide a general method for constructing such counterexamples. Concerning properties of the arithmetic degree, we give a new Bezout-type theorem. Finally we take a brief look at open problems concerning the arithmetic degree under hypersurface sections.

Acknowledgements

- This thesis is dedicated to the memory of my supervisor Professor Wolfgang Vogel. His expertise, guidance and enthusiasm were an inspiration. He will be greatly missed.
- My special thanks to Dr. Le Tuan Hoa for his careful critical reviews regarding this work. The final manuscript was substantially improved by these reviews.
- I would like to thank Dr. Kee Teo for taking over the position as my supervisor, with all that entails, at such a late stage. I am very grateful.
- Thanks to Mark Johnston for the help he has given me in learning to use text editors and the appropriate compilers. His patience is appreciated.
- I am also grateful for all of the encouragement and support given to me by fellow residents of Rm 2.40, in particular to Nick, Mary, and Anton.
- Thanks to all of the staff in the Department of Mathematics at Massey University for creating a friendly and supportive environment in which to work.
- I could not begin to put into words the thanks owed to my husband Brian. Thank you for making my world a much better place over the past 7 years.
- Finally, I would like to thank my parents Tom and Kathy for all the support they have given me, both financially and emotionally, in my educational career and otherwise.

Table of Contents

Abstract	iii
Acknowledgements	iv
Table of Contents	v
0 Introduction	1
0.1 Degrees of an ideal	1
0.2 This work: an outline	3
1 Preliminaries and Notation	5
1.1 Ideals	5
1.2 Primary Decomposition	6
1.3 Monomial Ideals, Their Primary Decomposition, and the Splitting Lemma	6
1.4 Dimension	9
1.5 Length-Multiplicity	10
1.6 Degree, Geometric Degree, and Arithmetic Degree	12
2 On a lower bound for the arithmetic degree	14
3 Remarks on the division problem and Bezout-type theorems	17
3.1 Introduction	17
3.2 Remark on Hilbert Nullstellensatz	18

3.3	Remark on a Bezout-type theorem, Part I	22
3.4	Remark on a Bezout-type theorem, Part II	23
4	A Bezout-type theorem for the arithmetic degree	26
4.1	Introduction	26
4.2	New Results	27
5	Arithmetic degree under hyperplane section	32
6	Conclusions and suggestions for future work	36
Appendix A	Some relationships between geometry and algebra	38
Appendix B	Computer output	40
