# BOUNDS ON THE ARITHMETIC DEGREE 

A thesis presented in partial fulfilment OF THE REQUIREMENTS FOR the degree of Master of Science in Mathematics at

Massey University

Thomasin Ann Smith
1996

## Abstract

In this thesis we study the arithmetic degree theory of polynomial ideals. The main objectives are: (i) to show whether we can generalize a lower bound on the arithmetic degree of monomial ideals to the arithmetic degree of arbitrary homogeneous ideals; and (ii) to explain whether some known bounds for the geometric degree can be restated in terms of bounds on the arithmetic degree. We give a negative answer to all questions raised by constructing counterexamples. In some cases we provide a general method for constructing such counterexamples. Concerning properties of the arithmetic degree, we give a new Bezout-type theorem. Finally we take a brief look at open problems concerning the arithmetic degree under hypersurface sections.

## Acknowledgements

- This thesis is dedicated to the memory of my supervisor Professor Wolfgang Vogel. His expertise, guidance and enthusiasm were an inspiration. He will be greatly missed.
- My special thanks to Dr. Le Tuan Hoa for his careful critical reviews regarding this work. The final manuscript was substantially improved by these reviews.
- I would like to thank Dr. Kee Teo for taking over the position as my supervisor, with all that entails, at such a late stage. I am very grateful.
- Thanks to Mark Johnston for the help he has given me in learning to use text editors and the appropriate compilers. His patience is appreciated.
- I am also grateful for all of the encouragement and support given to me by fellow residents of Rm 2.40, in particular to Nick, Mary, and Anton.
- Thanks to all of the staff in the Department of Mathematics at Massey University for creating a friendly and supportive environment in which to work.
- I could not begin to put into words the thanks owed to my husband Brian. Thank you for making my world a much better place over the past 7 years.
- Finally, I would like to thank my parents Tom and Kathy for all the support they have given me, both financially and emotionally, in my educational career and otherwise.

## Table of Contents

Abstract ..... iii
Acknowledgements ..... iv
Table of Contents ..... v
0 Introduction ..... 1
0.1 Degrees of an ideal ..... 1
0.2 This work: an outline ..... 3
1 Preliminaries and Notation ..... 5
1.1 Ideals ..... 5
1.2 Primary Decomposition ..... 6
1.3 Monomial Ideals, Their Primary Decomposition, and the Splitting Lemma ..... 6
1.4 Dimension ..... 9
1.5 Length-Multiplicity ..... 10
1.6 Degree, Geometric Degree, and Arithmetic Degree ..... 12
2 On a lower bound for the arithmetic degree ..... 14
3 Remarks on the division problem and Bezout-type theorems ..... 17
3.1 Introduction ..... 17
3.2 Remark on Hilbert Nullstellensatz ..... 18
3.3 Remark on a Bezout-type theorem, Part I ..... 22
3.4 Remark on a Bezout-type theorem, Part II ..... 23
4 A Bezout-type theorem for the arithmetic degree ..... 26
4.1 Introduction ..... 26
4.2 New Results ..... 27
5 Arithmetic degree under hyperplane section ..... 32
6 Conclusions and suggestions for future work ..... 36
Appendix A Some relationships between geometry and algebra ..... 38
Appendix B Computer output ..... 40
Index ..... 47
Bibliography ..... 49
