THE
GENETICAL EXAMINATION
OF
'GRASSLANDS ARIKI'
RYEGRASS

Lolium [(multiflorum x perenne) x perenne]

A thesis presented in partial fulfilment
of the requirements for the degree
of Master of Agricultural Science
in Plant Science.

John Richard Sedcole

1970

Preface.

'Grasslands Ariki' ryegrass - *Lolium* [(multiflorum x perenne) x perenne] - has been established in New Zealand as a successful pasture variety. While some genetic parameters were determined during its breeding programme, no diallel cross analyses have been performed on 'Ariki'. It was for this reason that this particular experiment was suggested to me.

The inclusion of two treatments arose from a cynical remark passed by W. Harris, regarding the failure on the part of plant breeders to use simulated swards. The experiment was designed to determine the levels of genotype-by-environment interaction in 'Ariki' ryegrass.

Acknowledgments.

The author wishes to record his appreciation of permission granted by Dr. L. Corkill, Director of "Grasslands Division", D.S.I.R., for the use of "Grasslands" facilities.

Acknowledgment is due to Professor B. R. Watkin, and to Mr. R. G. Clements, of the Agronomy Dept., Massey University, and to Dr. P. C. Barclay, of "Grasslands Division", D.S.I.R., for valued assistance in discussion on the design of the experiment and in interpreting the results; also to Professor B. I. Hayman of the Mathematics Dept., Massey University, and to Mr. V. G. Thomas, and Mrs. W. Singers of the Applied Mathematics Division, D.S.I.R., for encouraging help in the design of the experiment and in the statistical analyses.

Thanks are also due to the technicians in the Plant Breeding Section of "Grasslands Division" for assistance with planting, harvesting and weighing; and to Mrs. C. S. Lanting and Miss G. Smith for typing the thesis.

Finally, the author wishes to acknowledge the receipt of a State Services Study Award while at Massey University, thus enabling this work to be presented.

TABLE OF CONTENTS

	Page
Preface	ii
Acknowledgments	iii
List of Figures	vi
List of Tables	vii
Chapter I : Review and Discussion of the Relevant Literature	1
Methods of assessing the sward performance of forage plant genotypes	1
Simulated swards	7
Natural selection within swards and in spaced plant plots	10
The diallel cross	11
Chapter II : Materials and Methods	17
The area and the fertiliser used for the experiment	17
The population	17
Crossing techniques	18
Harvesting	20
Plant type notes	25
Statistical analysis	25
Heritability estimates	30
Chapter III : Tables of Results and Analyses of Data	33
Chapter IV : Discussion	84
General appraisal	84
Interactions for green weight	84
Seed production	88
Green yield and tiller number	91
Vegetative and fertile tiller numbers	94
Seed production and fertile tiller number	96
Characteristics of competitive ability	97
Chapter V : Conclusion	99
Genetic variation	99
Interactions	100
Components of yield	101
Competition	101

TABLE OF CONTENTS (cont.)

	Page
Chapter V (cont.)	
Changes in plant type	102
Limitations of the experiment	102
Summary	103
Appendix	105
Bibliography	108

List of Figures.
