HispaVeg: an online database

Currently holds data of 2663 vegetation plots, covering most of the Spanish woodland, scrubland and grassland types

Unlike other similar databases, a detailed description of the structure is stored with the floristic data of each plot

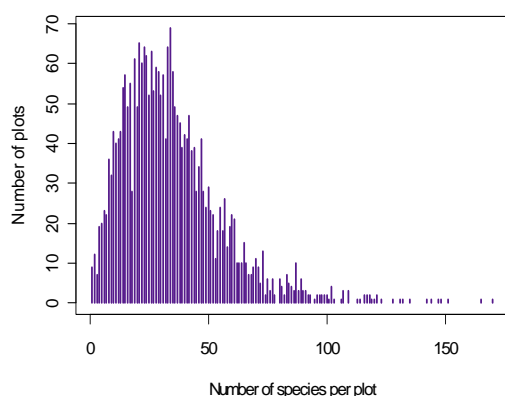

Most plots are large rectangles (400 m² or more)

Mean species number = 34

Survey dates from 1956 to present

Elevation from 0 to 2880 m

HispaVeg is freely available to the scientific community

Users can query the online database, view printable reports for each plot and download spreadsheet-like raw data for subsets of vegetation plots
