7 **Synthesis of ^oN-tert-butoxycarbonyl-L-arginine (2) [16a, c]**

8 In a one-neck flask, equipped with magnetic stirrer, we introduced *L*-arginine HCl (1.00; 4.8 mmol), dioxane (3.3 mL)
9 and 1 N NaOH (5.0 mmol). After cooling at 0°C, Di-*tert*-butyl-carbonate (Boc₂O) was added (1.1 equiv.) and the reaction
10 mixture was left under stirring for one night at r.t. The progress of the reaction was followed by TLC eluted in ethyl
11 acetate (AcOEt)/MeOH 9/1. Then the reaction mixture was poured into a separating funnel and extracted with *n*-hexane.
12 The organic phase was treated with saturated NaHCO₃ and the aqueous phases combined, acidified with 10% KHSO₄ to
13 pH = 2, while cooled at 0°C, extracted with *tert*-butanol and dried on Na₂SO₄ overnight. After evaporation of the solvent
14 at reduced pressure was obtained **2** that was investigated by IR and NMR analysis for checking the degree of purity and
15 was used in the next step without further purifications.

16 *o*N-*tert*-butoxycarbonyl-L-arginine (**2**) [16a, b, c] 1.21 g, white solid, 92% yield; m.p. 150°C dec., lit. 159-160 °C dec.
17 [16a], 145-150°C dec. [16c]; FTIR (KBr) 3500-2400 (OH), 3374 (NH), 3203 (NH), 1729 (C=O acid), 1671 (C=O
18 urethanecarbamate) cm⁻¹; ¹H NMR (300 MHz; DMSO-*d*₆) δ 1.38 (s, 9H, CH₃ Boc), 1.49-1.69 (m, 4H, βCH₂γCH₂), 3.09
19 (m, 2H, δCH₂), 3.84 (m, 1H, αCH), 7.04 (d, *J* = 7.9 Hz, 1H αNH), 7.30 (brs, 3H, ωNH₂ + ω'NH), 7.92 (t, 1H, δNH); ¹³C
20 NMR (75.5 MHz; DMSO-*d*₆) δ 25.45, 28.39, 31.30, 41.30, 53.42, 78.18, 155.71, 157.04, 174.29; Anal Calc. for
21 C₁₁H₂₂N₄O₄ (274.32): C, 48.16%; H, 8.08%; N, 20.42%; found: C, 47.75%; H, 7.78%; N, 20.21%.

Experimental procedure S9.

Synthesis of *N*-tert-butoxycarbonyl-*L*-ornithine (**4**) [22]

In a 50 mL two-neck flask *N*-tert-butoxycarbonyl- δ -*N*-Cbz-*L*-ornithine (2.05 g, 5.6 mmol), Pd/C 10% (1.19 g) and MeOH (38 mL) were introduced and the reaction mixture was maintained under stirring and at r.t. and under H₂ pressure (1.5 bar) for 5 h. After checking the completeness of the reaction by TLC (MeOH 100%), the catalyst is eliminated by filtration on a celite plug which was washed with H₂O two times. The filtrate was evaporated at reduced pressure and at temperature not exceeding 50-60°C to obtain an off-white solid which was treated with tetrahydrofuran (THF) and filtered. After washing with THF the solid was brought to constant weight under reduced pressure and then left overnight in a desiccator over P₂O₅ obtaining the desired product.

N-tert-butoxycarbonyl-*L*-ornithine (**4**) [22b] 1.06 g, white solid, 81.6% yield; m.p. dec.; FTIR (KBr) 3500-2400 (OH), 3380 (NH₂), 1690 (C=O acid + C=O urethanecarbamate), 1585 (NH) cm⁻¹; ¹H NMR (300 MHz; DMSO-*d*₆/D₂O) δ 1.41 (s, 9H, CH₃ Boc), 1.50-1.80 (m, 4H, β CH₂'CH₂), 2.89 (t, *J* = 6.5 Hz, 2H δ CH₂) 3.80 (m, 1H, α CH); ¹³C NMR (75.5 MHz; DMSO-*d*₆/D₂O) δ 25.42, 30.25, 31.58, 40.90, 57.01, 81.83, 158.35, 178.92; Anal Calc. for C₁₀H₂₀N₂O₄ (232.28): C, 51.71%; H, 8.68%; N, 12.06%; found: C, 51.47%; H, 8.94%; N, 12.28%.

Experimental procedure S10.

Synthesis of 1,3-Bis(tert-butoxycarbonyl)guanidine (**8**) [26]

In a 20 mL one-neck flask guanidine hydrochloride **7** (1.19 g, 12.5 mmol), H₂O (12.5 mL) and dioxane (2.5 mL) were inserted. The reaction mixture was added under stirring at 0 °C with di-*tert*-butyl carbonate (5.98 g, 27.4 mmol) and maintained at r.t. for 24 h, then was evaporated up to a third of the volume obtaining a white suspension which after dilution with H₂O (25 mL) was extracted with AcOEt (3 x 25 mL). The extracts were washed with 10% citric acid (15 mL), H₂O (15 mL), saturated NaCl (15 mL) and dried over anhydrous Na₂SO₄ overnight. The elimination of the solvent at reduced pressure gave a solid which was treated with petroleum ether and filtered, obtaining **8**.

1,3-Bis(tert-butoxycarbonyl)guanidine (**8**) [26] 1.94 g, white solid, 60% yield; m.p. 145-147°C (petroleum ether), lit. 144°C [26]; FTIR (KBr) 3370 (NH), 3310 (NH), 1588 (C=NH), 1730 (C=O), 1638 (NH) cm⁻¹; ¹H NMR (300 MHz; DMSO-*d*₆) δ 1.41 (s, 18H, CH₃ Boc), 8.00-11.00 (two brs, 3H, NH); ¹³C NMR (75.5 MHz; DMSO-*d*₆) δ 28.80, 80.51, 159.21, 159.48; Anal Calc. for C₁₁H₂₁N₃O₄ (259.30): C, 50.95%; H, 8.16%; N, 16.21%; found: C, 50.74 %; H, 8.48%; N, 16.42%.

1 **Experimental procedure S11.**

2 *Synthesis of 1,3-Bis(tert-butoxycarbonyl)-2-(trifluoromethylsulfonyl)guanidine (9) [26]*

3 In a 50 ml two-neck flask equipped with a dropping funnel, magnetic stirrer and a nitrogen valve **8** (1.86 g, 7.2 mmol),
4 CH₂Cl₂ (36 mL) and Et₃N (1.0 mL) were inserted. After cooling at -78°C, the mixture was added dropwise with triflic
5 anhydride (1.3 mL), the solution was allowed to reach r.t. and was stirred under nitrogen stream for 24 h. The dark solution
6 was then washed with 2 N KHSO₄ and H₂O and the organic phase was dried over anhydrous Na₂SO₄. The elimination of
7 the solvent under reduced pressure provided the crude **9** which was dissolved in CH₂Cl₂ (10 mL) and was percolated on
8 a small silica column (h = 10 cm, ø = 2 cm) eluting with CH₂Cl₂ (20 mL). The elimination of the solvent under reduced
9 pressure provided **9**.

10 *1,3- Bis(tert-butoxycarbonyl)-2-(trifluoromethylsulfonyl)guanidine (9) [26]* 1.98 g, white solid, 70% yield; m.p. 105-
11 108°C, lit. 115°C [26]; FTIR (KBr) 3377 (NH), 3306 (NH), 1787 (C=NSO₂CF₃), 1736 (C=O), 1631 (NH) cm⁻¹; ¹H NMR
12 (300 MHz; CDCl₃) δ 1.54 (s, 18H CH₃ Boc), 10.1 (br s, 2H, NH); ¹³C NMR (75.5 MHz; CDCl₃) δ 27.84, 86.02, 117.16,
13 121.40, 151.43; Anal Calcd for C₁₂H₂₀F₃N₃O₆ (391.36): C, 36.83%; H, 5.15%; N, 14.56%; Found: C, 36.77 %; H, 5.04%;
14 N, 14.24%.
