Abstract not available for ES2571854 (T3)

Abstract of corresponding document: WO2007135424 (A1)

There is described a surface mountable delivery device which has a multi layer construction comprising a liquid permeable support layer adjacent to a porous reservoir layer, the porous reservoir layer being provided with a backing layer. The surface mountable delivery device may comprise of stickers, tapes, pads, tubes, socks, etc.
