

Philosophical Books Vol. 50 No. 1 January 2009 pp. 79–86

**CHRISTOPHER ROWE'S PLATO AND THE ART OF
PHILOSOPHICAL WRITING**

[2]

GEORGE RUDEBUSCH
*Northern Arizona University***Interpretation**

“The biggest question of all” in the book is “What is it, exactly, that Plato wanted to achieve, and thought he could achieve, by writing as he did?” (p. 2). As the book sees them, “Plato’s texts . . . force us to try to see whatever point it is that they are making through the fog of a conversation with *this* individual now” (p. 11).

[3]

The book begins its answer to the big question by making some uncontroversial claims about philosophical dialogue. The questing after truth—about how to live an excellent human life—is, according to the book, true philosophy: “Philosophy, as an activity, is the “art of dialogue” . . . on the sorts of subjects expertise in which contributes to wisdom” (p. 8). The book identifies this *art of dialogue* in order to distinguish it from *rhetorical persuasion*.

For the book, it is reasonable to suppose that “the dialogues . . . have a persuasive function . . . in addition to any purely philosophical one” (p. 12). The book distinguishes the persuasive function of rhetoric from the philosophical function of dialectic. As I interpret the book, *The Art of Philosophical Writing*,¹ the art that is the topic of the book is not philosophical dialectic but persuasive rhetoric.

[4]

The book’s point in drawing a distinction between philosophical dialogue and persuasive rhetoric is that in the case of Plato’s dialogues “the philosophical will be employed in the service of the persuasive” (p. 12). Philosophical writing employs philosophical dialogue in the service of persuasive rhetoric. The subordination of philosophy to rhetoric justifies the book’s claim that, in the case of Plato, “written dialogue is something considerably more than a piece of philosophy” (p. 10) and also justifies its claim that the fact that Plato “employed dialogue form in different ways, some of them not portraying dialectic in action, does not . . . indicate that he ever abandoned his view that *living* dialogue, based on questioning of oneself or others . . . was the only available means to intellectual progress” (p. 10).

The big question was, “What was Plato’s goal in writing as he did?” As I interpret the book, the big answer—I take this to be the main thesis of the book—is that Plato’s writing is an art of persuasive rhetoric, employing in its service philosophical dialogue. And the goal of the rhetoric is to *persuade readers to turn to a life in which they seek wisdom about human excellence through philosophical dialogue*.

1. C. Rowe, *The Art of Philosophical Writing* (**, **).

1 It is a consequence of the book's big answer that it can defend a Unitarian
2 thesis about Plato's philosophical career, despite the sharp contrasts in the style
3 and content of Plato's dialogues. These contrasts seem to corroborate Aristotle's
4 view that the character Socrates in the dialogues is sometimes a historical
5 portrait, while at other times merely a mouthpiece for Plato's own views. The
6 book's big answer allows it to explain why sharp contrasts in style and content
7 need not correspond to a sharp contrast in Plato's philosophical career. Indeed,
8 the bulk of the book is devoted to giving such explanations for a number of
9 Plato's dialogues.

10 In *style*, for example, the book recognizes an appearance of sharp contrast
11 between *Socratic* dialogues (full of mostly unsuccessful search) and *non-Socratic*
12 dialogues (full of mostly successful answer). Here is the book's explanation:
13 "What the situation in the "non-Socratic" . . . dialogues marks is a change of
14 strategy, not a change of mind. If Plato writes in a different way, that is because
15 he has decided to approach his readers . . . by a different route . . . Even while
16 insisting that philosophy is the key, he by no means always uses dialectic or the
17 written counterpart of dialectic to achieve that stimulation and provocation. In
18 fact philosophical dialectic is merely one of his tools" (p. 13).

19 Coining my own terms for a distinction the book draws, I call the book's
20 Plato a *weak intellectualist* throughout his Unitarian career. A *strong intellectualist*
21 dismisses the tripartite soul as "mere illusion" (p. 170). In contrast, the weak
22 intellectualist is an intellectualist about "what the soul really is"—but *that* soul
23 is "hidden" in "what it actually becomes, in [embodied] life" (p. 170). Being
24 "made up of . . . three parts . . . isn't how the soul really is, in its essential
25 ("truest") nature" (pp. 170–1). But tripartite is what the soul actually becomes,
26 whenever people "choose to go that way. Appetite may be a monster, but in
27 itself . . . it is only a *potential* monster" (p. 172). Plato as a weak intellectualist
28 finds himself sometimes addressing souls who have not achieved their truest
29 nature and have monstrously overpowering appetites. He can use one genre of
30 writing—dialectic—for the *intellects* of such people, while using other genres—
31 involving myths or graphic images—for their *spirits*, so that such souls as a
32 whole can begin to move toward harmony by taming their *appetites*.²

33 In the *substance* of Plato's dialogues, the book recognizes a sharp contrast
34 between, on the one hand, for example, the apparent *intellectualism* of some
35 dialogues, which argue as if human excellence is nothing but knowledge how to
36 live well, and on the other hand, the apparent *nonintellectualism* of other dia-
37 logues, in which the soul has three parts and in which knowledge is not enough
38 for an excellent life, dialogues where virtues of character are required in
39 addition to virtue of intellect. The general form of the book's explanation for
40 this and other substantial contrasts in the dialogues is that when Plato portrays
41 dialectic in action, such as the conversations with Polus or Thrasymachus,
42 Socrates begins with different starting points appropriate to different interlocu-
43 tors, and *in such dialectic, different starting points compel different conclusions*.

44 For example, about "the political and psychological analyses conducted in
45 *Republic 4*," the book says, "there is a question mark over the level of Socrates'

46
47 2. See my "Swan Songs, Last Words and Myth's Aim," *Thomist*, 56 (1992), pp. 726–32.

1 (and Plato's) commitment to [the conclusions, because] . . . the argument is
2 itself shaped as much by the interlocutors' assumptions and starting-points as
3 by his own. Left to himself . . . Socrates makes quite clear [that] he would have
4 rather different things to say about the best kind of city and the best state of the
5 soul" (p. 17).

7 **First Evaluation: Small and Big Questions**

8
9 The book says that "for anyone who has seriously read any . . . dialogue from
10 beginning to end," "the biggest question of all" is "What is it, exactly, that Plato
11 wanted to achieve . . . by writing as he did?" (p. 2). This is a *meta*-question, an
12 academic question. In my judgment, there are much bigger questions for the
13 serious reader. For example, there is the existential question Callicles asks in
14 the *Gorgias*. Socrates has just concluded his argument with Polus: "To do wrong
15 to another and get away with it, unpunished, is the worst thing that can happen
16 to a man" (p. 479d). Upon hearing this, Callicles appropriately replies:
17 "Socrates, if what you say turns out to be true, aren't we human beings living
18 our lives upside down and doing everything quite the opposite of what we
19 ought?" I agree with Callicles: *everything important in human life hangs on the question*
20 *whether Socrates' arguments are sound*—not on the biographical question: "What
21 were Plato's goals when he wrote the dialogues?" In my judgment, the book's
22 scale of measurement about what is big and small for a serious reader needs to
23 be turned upside down: Existential questions are big and authorial intent is
24 small.

25 **Second Evaluation: Inferior and Superior Answers**

26
27 In order to make my second evaluation, I need to make an observation about
28 one advantage of Socratic conversation and to review the Divided Line.

29
30 According to the *Oxford English Dictionary*, "in classical Greek Drama, [*stichomythia* is] dialogue in alternate lines, employed in sharp disputation, and
31 characterized by antithesis." As examples, there are the disputations between
32 Haemon and Creon in Sophocles' *Antigone* and between Orestes and the
33 Chorus in the trial scene of Aeschylus's *Eumenides*.

34
35 Socrates refers to the event that I call *stichomythia in an extended sense* in the
36 *Euthyphro*—when "we get angry and hostile to each other because we disagree
37 and are unable to arrive at a decision" (7c10–12). As Socrates says, this
38 happens not about matters we know how to settle by counting, weighing, and
39 measuring, but about "the righteous and unrighteous, praiseworthy and dis-
40 graceful, good and bad" (7d1–2).

41
42 *Stichomythia* about what is righteous, praiseworthy, and good remains a
43 mark of our personal moral and shared political lives. For example, human
44 beings lack the ability to weigh the competing values of *autonomy* and *benevolence*
45 in a wide range of cases, leading to irresolvable disputes within a person or a
family, such as: *When should I cease to make life decisions for my teen-age children as their*

1 *intellects become more and more fully formed? When should I begin to make decisions for my*
2 *elderly parents, as their intellects become more and more disabled?* We are likewise unable
3 decisively to weigh such values in our national deliberations about such things
4 as legislating minimum wages or sex workers or sweat shops or trade in human
5 organs or payday loan companies. I take it that such stichomythia is the
6 defining existential problem for human beings.

7 My observation is that the great existential advantage of Socratic conversa-
8 tion is that it solves the problem of stichomythia. Socrates does not oppose
9 point with counterpoint. He does not oppose at all. He merely asks questions.
10 The interlocutor does not find himself making speeches opposed to rival
11 speeches by Socrates. Instead, the interlocutor finds that stichomythia is
12 replaced by self-examination, Socratically assisted.

13 I turn now to the Divided Line. As human beings, we seek answers to
14 questions of the form *What is X?* such as *What is the large?* or *What is a finger?*
15 There are two main kinds of answer: ostensive and discursive.

16 *Ostensive*—that is, *visible*—answers work by pointing out particular instances
17 of what is large, like *this* building or *this* room. There is a problem with
18 ostension. Particular instances of what is large will inevitably also be instances
19 of, say, *crowded or empty, well or poorly lit, warm or cold*, and many other things that
20 are not large. Worse, particular instances of large will inevitably also be, in
21 some respects, small. Because of their multifaceted and even contrary nature,
22 visible instances are ambiguous and relatively unclear answers to questions.

23 In contrast to ostensive answers, *discursive* answers draw attention to intelli-
24 gible, not visible objects—these are *Plato's Forms*. By doing so, discursive
25 answers avoid the unclarity of being ambiguous and contrary. Relative to
26 visible *instances*, intelligible general accounts give us single-faceted hence unam-
27 biguous and hence relatively clear answers.

28 In the *Republic*,³ Socrates divides an imaginary line in proportion to the
29 relative “clarity and obscurity” (509d9) of these different kinds of answers. The
30 main division he makes on the line of *more and less clear* gives us a ratio of
31 intelligible, discursive answers to visible, ostensive answers. Then, Socrates
32 subdivides the two main parts.

33 There is a *subdivision* of the visible, between visible images and the things of
34 which they are images. For example, take the question: *What is Socratic dialogue?*
35 One kind of answer points out a *visible image* of Socratic dialogue, say, a printed
36 Platonic text. While such a text is a kind of ostensive definition, Socrates says
37 that there is another, clearer kind of visible answer. It is to show the
38 questioners—to use my example—a living Socratic conversation by actually
39 cross-examining them on the subject of human excellence. This living instance
40 of Socratic dialogue belongs to the *more clear* subdivision of visible answers,
41 while the written record of such a dialogue belongs to the *less clear* subdivision
42 of visible answers.

43 In the same ratio of relative clarity and obscurity as the subdivisions of the
44 *visible*, Socrates also subdivides the *intelligible*. The *less clear* subdivision of the
45 intelligible proceeds down *from hypotheses to conclusions*—like Euclidean geometry

46
47 3. Plato, *Republic* (••, ••).

1 (510c2, 511b1)—while in the *more clear* subdivision, as the book translates,
2 “Reason will “grasp” the uppermost of the four segments of the line “through
3 its capacity for dialectic, treating its hypotheses not as [starting points, $\rho\chi\zeta$]
4 but actually as hypotheses, with the purpose [of] proceeding until it reaches the
5 unhypothetical” answer, not working down to a conclusion but going up “to
6 the starting point ($\rho\chi\nu$) of the whole” (219) and only from that point going
7 back down to a conclusion.⁴

6

8 Here, for example, is my hypothetical account in answer to the question,
9 what is Socratic dialogue? Like Euclidean geometry, my answer sets out start-
10 ing points from which it derives an account. Like Euclid, I allow myself five
11 starting points:

- 12 • Nonphilosophers are blameworthy because they negligently act as if they
- 13 know the ultimate human goods, while philosophers, seeking the wisdom
- 14 they lack, are free from blame.
- 15 • Socrates’ divine mission was to turn nonphilosophers into philosophers.
- 16 • Most people falsely think that the passions can overpower knowledge and
- 17 hence falsely think that human excellence requires *multiple* character traits
- 18 in addition to the single knowledge of human well-being.
- 19 • Socrates can refute most people who claim to know human excellence by
- 20 getting them to take on a claim that excellence is multiple, then eliciting a
- 21 contradiction.
- 22 • Socrates’ refutations of such people are the best way to turn nonphiloso-
- 23 phers into philosophers.

24
25
26 *Given these five starting points*, I can derive my account of Socratic dialogue.⁵ My
27 point here is that my account depends upon its starting points. *If you accept*
28 *contrary starting points*, you will derive a *contrary account of Socratic dialogue*.

29 Many scholars *do* accept contrary starting points in their accounts of Socratic
30 dialogue. My hypothetical answer does not have the resources to be reconciled
31 with theirs, producing stichomythia. This stichomythia makes the truth of my
32 hypothetical, Euclid-like answer unclear and illustrates how a hypothetical
33 answer is an inferior intelligible answer.⁶ (Inferior hypothetical reasoning is not
34 the method of hypothesis referred to in other dialogues. *That* method of
35 hypothesis is a method for testing hypotheses, rather than taking them for
36 granted and working down from them to conclusions.)

7

37 The superior intelligible answer is *dialectic*, which treats its hypotheses not as
38 starting points but “actually as hypotheses, proceeding until it reaches the
39 unhypothetical” answer (p. 219).⁷ If I am able to give this kind of dialectical
40 answer, *I would be able to begin with any starting points—in particular, the starting points*
41 *of my interlocutor*. Whenever the interlocutor gives a statement *contrary* to one of
42 my postulates, I would elicit from that interlocutor other statements refuting his
43 contrary statement.

44 4. Ibid., 511b4–8.

45 5. See my *Socrates* (Wiley-Blackwell, 2009).

46 6. See Plato, *Republic*, 509d6–e1, 511a3–8.

47 7. Ibid., 511b5–7.

1 Suppose, for example, that I meet someone who asserts a statement contrary
2 to my third postulate of Socratic dialogue, that is, someone who states that the
3 passions *can* overpower knowledge. If I am dialectical, I can begin from that
4 contrary statement, and then elicit other statements that lead to contradiction.
5 If I repeat this process often enough, eventually the interlocutor will have no
6 alternative but accept my third postulate. And so, by dialectic, I am able, if I
7 know my stuff, to lead interlocutors eventually to the truth of each of the five
8 postulates *from any statements they make contrary to those postulates*. Thus, I am able to
9 begin from *any starting points* yet reach, in the case of every interlocutor, the very
10 same account of Socratic dialectic. This explains why, unlike the Euclidean
11 kind of hypothetical answer, a dialectical answer is *unhypothetical*.

12 Let me sum up. A Euclidean answer can only work downward away from its
13 starting points to a conclusion. A Euclidean answer is hypothetical and subject
14 to stichomythia. In contrast, a dialectical answer is unhypothetical: It can begin
15 from *any* starting points yet always produce agreement to the *same* answer. A
16 dialectical answer is not caught in stichomythia. Thus, the dialectical is super-
17 ior in clarity and truth to the hypothetical.

18 Let me emphasize: Hypothetical answers are *not* dialectic. Dialectic is better
19 both for seeking the truth and for teaching the truth. It is better as a truth-
20 seeking strategy, because its results are not dependent upon possibly false
21 starting points that go unchallenged. And it is better for persuading or teaching
22 another the truth, because it begins with the *interlocutor's* assertions, even if they
23 are contrary to the truth.

24 My interpretation of the Divided Line is one way to justify Plato's distinction
25 between hypothetical and unhypothetical intelligibility. Very likely, my
26 account is wrong, and there is a better way to interpret Plato's Divided Line.
27 You do not need to accept my account as anything but provisional. *I ask only*
28 *that you accept that Plato does make a valid distinction between inferior hypothetical and*
29 *superior unhypothetical answers*, either according to the details of my interpretation
30 or according to some better interpretation. (Notice, by the way, that the essay
31 now in your hands is an inferior hypothetical answer: It is incapable of begin-
32 ning from *your* starting points to reach my conclusion.) If you accept that Plato's
33 distinction is valid, then you will also agree with my second evaluation of the
34 book: *The book fails to give an account of Plato's Art of Philosophical Writing*. The book
35 fails because its account of Socratic dialectic is *antidialectical*.

36 The book's confusion of the hypothetical method for unhypothetical dialectic
37 is easy to document. Let me begin from the statement: "The exchange
38 between Socrates and his interlocutors in the text of the *Republic* will itself count
39 as a perfectly acceptable example of the kind of thing *dialectic* may be" (p. 167).

40 About *Republic* I, the book says, "The real problem is that Socrates has been
41 talking *across* rather than *to* Thrasyarchus. [Socrates] may be satisfied with his
42 own arguments, but he has done little or nothing to persuade his opponent; and
43 indeed, insofar as he is—as I see it—using assumptions that Thrasyarchus will
44 never even have dreamed of sharing, one could say that he hasn't even tried"
45 (p. 177). The features the book attributes to Socrates make his discourse, what
46 the Divided Line calls, *inferior hypothetical* discourse. There is Socrates' use of
47 starting points that Thrasyarchus does not share ("will never even have

1 dreamed of sharing”) and the resulting stichomythia (“talking *across* rather than
2 *to* Thrasymachus”). Yet, the book says that this discourse is a “perfectly accept-
3 able example of the kind of thing dialectic may be.” This is a confusion of
4 hypothetical and dialectical discourse.

5 There is much more of the same confusion. The book says, “Socrates is using
6 premisses which are perfectly familiar and *true to him*, but entirely unfamiliar to
7 Thrasymachus, who if told what they were would reject them outright” (pp.
8 186–7). Not only must Socrates be using inferior hypothetical reasoning, he is
9 apparently hiding the fact from Thrasymachus!

10 Again, the book says: “It is true that this defence of Socrates’ argument in
11 one way leaves it looking even worse: not only is it rather a weak argument, but
12 it doesn’t really address Thrasymachus’s position at all” (p. 193). With Thra-
13 symachus, “Socrates at every turn begins from positions that he *himself* holds”
14 (p. 195). Socrates’ dialogue with Thrasymachus is an inconclusive “confronta-
15 tion between two opposing perspectives” (p. 195). And “the outcome is that we,
16 the readers, have two different arguments to choose from. If we opt for the one
17 Thrasymachus goes along with, then we shall end up about as happy as
18 Thrasymachus, i.e. not very happy. If on the other hand we opt for the
19 argument that Socrates has in mind, and that uses [that is, *works downward from*]
20 his premisses, then our degree of contentment will be in proportion to our
21 contentment with the premisses” (pp. 186–7).

22 Curiously, the book seems to endorse the hypothetical method (which it
23 confuses with dialectic) as a way to persuade someone who begins from con-
24 trary starting points: “Socrates starts from what he himself believes, and after
25 all his ultimate aim is to bring Thrasymachus and anyone else around to his
26 own point of view” (p. 189). The book seems unaware that the method it
27 attributes to Socrates is inferior, that its hypothetical conclusions are obscure in
28 comparison to the clarity of unhypothetical dialectic: “Since Socrates believes
29 in his own premisses and disbelieves in Thrasymachus’s . . . this is a *quite rea-*
30 *sonable way* for him—for Socrates—to go” (pp. 186–7). As I have documented
31 above, the book sees that, in fact, stichomythia rather than persuasion is a
32 feature of the hypothetical method it attributes to Socrates. So, I cannot tell
33 why the book endorses discourse that takes for granted one’s *own* starting points
34 in conversation with someone who does *not* share them, and I could find no
35 reasons anywhere in the book supporting the endorsement.

36 In my judgment, the Divided Line is right that *to elicit the same position from any*
37 *starting point is clearer and more persuasive than to be able only to work down to conclusions*
38 *from hypotheses taken for granted*. And so, the hypothetical method is an inferior way
39 to persuade.

40 Let me say in passing that the book’s repeated statements that Socrates uses
41 assumptions in his argument without securing agreement to them are *false*.
42 Certainly, Socrates does painstakingly work from Thrasymachus’ own
43 position.⁸ The book does not give a close reading of the arguments with
44

45 8. On 340d–345e, see my “Socratic Neutralism,” in D. Cairns, F.-G. Herrmann, and T. Penner
46 (eds.), *The Good and the Form of the Good*, (Edinburgh University Press, 2007), pp. 76–92. On
47 349a–354a, see my *Socrates, Pleasure, and Value* (Oxford University Press, 1999), pp. 97–113.

1 Thrasymachus, so I cannot tell why it denies the obvious: *Socrates, at every step,*
2 *begins with Thrasymachus' premises in eliciting Socratic conclusions.*

3 The book confuses the hypothetical method for unhypothetical dialectic
4 throughout, in, for example, its discussions of *Republic* 2 and 5, the *Phaedo*, and
5 the *Gorgias*. About Socrates' refutation of Polus and the conclusions reached in
6 the *Gorgias*, the book says: "The argument is not the one Socrates would have
7 chosen, but one that is *forced* on him by the state of Polus' thinking" (p. 159).
8 Evidently, the book imagines that the argument Socrates would *freely* choose is
9 one where the interlocutor grants to Socrates without dispute starting points of
10 Socrates' own choosing. This is to imagine that Socrates' preferred method is,
11 in terms of the Divided Line, the inferior hypothetical account, not the superior
12 unhypothetical, dialectical account. Notice that a dialectician is never forced to
13 do things in conversation but freely begins unhypothetically, with whatever
14 is challenged in conversation, and nevertheless, always derives the same
15 conclusion.

16 **Conclusion**

17
18
19 The book might *both* reverse its assessment of the relative value of existential
20 versus academic questions *and* repent of its antidialecticism, yet nonetheless
21 maintain its thesis that Plato's dialogues contain images of philosophical dia-
22 lectic as well as other genres, all for the sake of persuading the reader to turn
23 to a life of philosophy. But the book's Unitarian corollary about Plato's career
24 is a lost cause, depending as it does on the claim that *in dialectic, different*
25 *conclusions come from different starting points*—which is precisely the claim falsified
26 by the Divided Line.

27 Unitarianism forces the book to interpret Socrates as "forced" (p. 159) rather
28 than free in conversation. Unitarianism forces the book to see, instead of lucid
29 argument, a "fog" (p. 11) of Socrates *seeming* to argue for contrary positions in
30 different dialogues while *in fact* holding the same position throughout. The
31 book's Unitarianism comes at an exorbitant price: Socratic conversations turn
32 out to be, in terms of the Divided Line, inferior hypothetical persuasion rather
33 than superior unhypothetical dialectic. The book does wrong to purchase unity
34 at such a price. We do better to interpret Socratic conversation as superior
35 unhypothetical dialectic.

AUTHOR QUERY FORM

Dear Author,

During the preparation of your manuscript for publication, the questions listed below have arisen. Please attend to these matters and return this form with your proof.

Many thanks for your assistance.

Query References	Query	Remark
q2	AUTHOR: Please confirm that the article title is correct.	
q3	AUTHOR: Please note that numbers in parenthesis were formatted as page numbers. Please check and confirm that the changes are correct.	
q4	AUTHOR: Please note that citations were changed to footnotes as per journal style. Please check and confirm this is correct. Also, please provide the publisher and year of publication, and confirm that the author is correct for Footnote 1.	
q5	AUTHOR: Please provide the publisher and year of publication, and confirm that the author is correct for Footnote 3.	
q6	AUTHOR: "The less clear subdivision of the intelligible . . . down to a conclusion." There seems to be corrupted symbols in this sentence. Please check and insert the necessary symbols.	
q7	AUTHOR: Footnote 6 has been inserted here. Please check and confirm that the placement and the citation are correct.
