

# Application of the Dempster-Shafer Theory to the Classification of Pixels from Aster Satellite Images and Spectral Indices

Submitted by Alain Clément on Mon, 02/26/2018 - 16:52

Titre	Application of the Dempster-Shafer Theory to the Classification of Pixels from Aster Satellite Images and Spectral Indices
Type de publication	Article de revue
Auteur	Okaingni, Jean-Claude [1], Ouattara, Sié [2], Kouassi, Adles Francis [3], Adama, Koné [4], Vangah, Wognin Joseph [5], Clément, Alain [6]
Editeur	Scientific Research Publishing
Type	Article scientifique dans une revue à comité de lecture
Année	2017
Langue	Anglais
Date	27/07/2017
Numéro	7
Pagination	1462-1477
Volume	5
Titre de la revue	Journal of Applied Mathematics and Physics
ISSN	2327-4352
Mots-clés	Aster Satellite Images [7], Belief Functions [8], classification [9], Dempster-Shafer Theory [10], Source Modeling [11], Spectral Indices [12]
Résumé en anglais	<p>In this paper, it is proposed to apply the Dempster-Shafer Theory (DST) or the theory of evidence to map vegetation, aquatic and mineral surfaces with a view to detecting potential areas of observation of outcrops of geological formations (rocks, breastplates, regolith, etc.). The proposed approach consists in aggregating information by using the DST. From pretreated Aster satellite images (geo-referencing, geometric correction and resampling at 15 m), newchannels were produced by determining the spectral indices NDVI, MNDWI and NDBaI. Then, the DST formalism was modeled and generated under the MATLAB software, an image segmented into six classes including three absolute classes (E,V,M) and three classes of confusion ({E,V}, {M,V}, {E,M}). The control on the land, based on geographic coordinates of pixels of different classes on said image, has made it possible to make a concordant interpretation thereof. Our contribution lies in taking into account imperfections (inaccuracies and uncertainties) related to source information by using mass functions based on a simple support model (two focal elements: the discernment framework and the potential set of belonging of the pixel to be classified) with a normal law for the good management of these.</p>
