# **Learning Object Metadata Interchange Mechanism**

A thesis presented in partial fulfillment of  
the requirements for the degree of  
Master of Information Science  
at Massey University, Palmerston North, New Zealand.

**Yuejun Zhang**

**2005**

## **Acknowledgements**

I would like to thank all my friends who provided various helps in completion of this thesis.

Special thanks are given to Associate Professor Kinshuk, my supervisor, for all his help throughout this project. Without his patient guidance and valuable advice, it would be impossible to complete this thesis.

## Abstract

In spite of the current lack of conceptual clarity in the multiple definitions and uses, the term *learning objects* is still frequently used in content creation and aggregation in the online-learning field. In the mean time, considerable efforts have been initiated in the past few years for the standardization of metadata elements for consistent description of learning objects, so that learning objects can be identified, searched and retrieved effectively and efficiently across multiple contexts. However, there are currently a large number of standardization bodies and an even much larger number of ongoing standard initiatives in the learning field, and different learning objects repositories are likely to apply different metadata schemas to meet the specific needs of their intended communities. An interchange mechanism for the conversion between various metadata schemas, therefore, becomes necessary for intensive interoperability.

In this thesis, we first make a brief introduction to the concept *learning objects*, then the term *metadata*, followed by a description of the functional requirements of learning objects, the purposes of metadata, and the importance of metadata for learning objects. After that, this thesis investigates metadata schemas in various fields in general, focused on several mainstream metadata specifications developed for learning objects in particular. The differences among these metadata schemas for learning objects are analyzed and a mapping between their elements is identified. On the basis of literature review, a framework for interchange of metadata schemas is proposed and a prototype to demonstrate the functionalities of the framework is developed. For the high scalability and the high accuracy of the developed system, a so-called LOM-intermediated approach is suggested, and a so-called dynamic-database methodology is adopted. The LOM-intermediated approach significantly simplifies the metadata mapping issues by undertaking the schema-schema mapping in a way of schema-LOM-schema mapping, while the dynamic-database methodology effectively prevents any data-loss resulting as a by-product from the use of LOM-intermediated approach. The prototype currently generates and outputs XML metadata in IMS, EdNA, Dublin Core and LOM. It is a web-based three-tier architecture, using Java technologies for implementation, MySQL as the database server and JDBC for database access.

# **TABLE OF CONTENTS**

<b>CHAPTER 1 BACKGROUND AND PROJECT OUTLINE</b>	<b>1</b>
<b>1.1 Background</b>	<b>1</b>
<b>1.2 Project Outline</b>	<b>2</b>
1.2.1 Scalable, General-purpose System	2
1.2.2 LOM-intermediated Approach	3
1.2.3 Dynamic-database Methodology	3
1.2.4 System Functionalities	4
1.2.5 System Architecture and Technologies	5
<b>1.3 Outline of This Thesis</b>	<b>5</b>
<b>CHAPTER 2 LEARNING OBJECTS AND METADATA</b>	<b>7</b>
<b>2.1 Learning Objects</b>	<b>7</b>
2.1.1 Definition of Learning Objects	7
2.1.2 Capabilities of Learning Objects	10
2.1.3 Pros and Cons of Learning Object Approach	11
2.1.4 Types of Learning Objects	12
2.1.5 Other Issues about Learning Objects	15
<b>2.2 Learning Object Metadata</b>	<b>16</b>
2.2.1 What Is Metadata?	18
2.2.2 Problems of Normal Search Technologies	21
2.2.3 Advantages and Disadvantages of Metadata	22
2.2.4 Categorization of Metadata	23
2.2.5 Who Creates Metadata?	25
<b>2.3 Learning Objects Repositories</b>	<b>25</b>
2.3.1 Introduction to Learning Objects Repository	25
2.3.2 Examples of Learning Object Repositories	27
<b>2.4 Summary</b>	<b>27</b>
<b>CHAPTER 3 METADATA SCHEMAS</b>	<b>29</b>
<b>3.1 Metadata Standardization</b>	<b>29</b>
<b>3.2 Metadata Schemas Overview</b>	<b>31</b>
3.2.1 Web Community and Dublin Core	32
3.2.2 Metadata Standardization in Government Sector	35
3.2.3 Libraries and MARC	36
3.2.4 Archives and ISAD	36
3.2.5 Publishing Industry and ONIX	37
3.2.6 Multimedia Metadata Standards	39

<b>3.3 Metadata Schemas for Learning Objects</b>	<b>39</b>
3.3.1 General Introduction	39
3.3.2 LOM	40
3.3.3 IMS and ADL SCORM	44
3.3.4 EdNA Metadata Standard	49
<b>3.4 Summary</b>	<b>50</b>
<b>CHAPTER 4 METADATA INTERCHANGE AND PROTOTYPE DESIGN</b>	<b>52</b>
<b>4.1 The Issue of Metadata Interchange</b>	<b>52</b>
<b>4.2 Crosswalks</b>	<b>53</b>
4.2.1 Definition and Issues	53
4.2.2 Examples of Crosswalks	54
4.2.3 Our Mapping Work	55
<b>4.3 Current Work on Metadata Interchange</b>	<b>56</b>
<b>4.4 A Metadata Interchange Framework and Prototype Design</b>	<b>60</b>
4.4.1 Purpose and General Requirements	60
4.4.2 The Proposed Framework	61
4.4.3 Prototype Functionalities	66
4.4.4 Prototype Architecture	68
4.4.5 Overall Processing Flow	69
4.4.6 The Database Design	71
4.4.7 Mappings between the Database and Metadata Schemas	75
4.4.8 XML Bindings and XML Schema Files	76
<b>4.5 Summary</b>	<b>84</b>
<b>CHAPTER 5 PROTOTYPE IMPLEMENTATION AND EVALUATION</b>	<b>86</b>
<b>5.1 Implementation Technologies</b>	<b>86</b>
5.1.1 Introduction	86
5.1.2 Java Technology	86
5.1.3 XML Technology	88
5.1.4 The JAXP API	91
5.1.5 The JDBC API	94
5.1.6 Java Servlets, JSPs, and JavaBeans	97
<b>5.2 Main Java Components in the Application</b>	<b>102</b>
<b>5.3 Description of Java Components</b>	<b>107</b>
5.3.1 The RecordBean and EdnaRecordBean Classes	107
5.3.2 The OpRecordBean and OpEdnaRecordBean Classes	109
5.3.3 The IMSCreator, EdNACreator, DCCreator, and LOMCreator Classes	109
5.3.4 The FileUploadBean Class	111
5.3.5 The FileRecordBean Class	112
5.3.6 The WebRecordBean Class	113

<b>5.4 The Web Application Deployment</b>	<b>114</b>
5.4.1 The Tomcat Server	114
5.4.2 Directory Structure of the Application	116
<b>5.5 System Evaluation</b>	<b>117</b>
5.5.1 Screen Interfaces	117
5.5.2 Examples of Interchange	121
<b>5.6 Summary</b>	<b>126</b>
<b>CHAPTER 6 CONCLUSION AND FUTURE WORK</b>	<b>128</b>
<b>6.1 Conclusion</b>	<b>128</b>
<b>6.2 Future Work</b>	<b>129</b>
