

Characterization of Nipah virus from naturally infected *Pteropus vampyrus* bats, Malaysia.

ABSTRACT

We isolated and characterized Nipah virus (NiV) from *Pteropus vampyrus* bats, the putative reservoir for the 1998 outbreak in Malaysia, and provide evidence of viral recrudescence. This isolate is monophyletic with previous NiVs in combined analysis, and the nucleocapsid gene phylogeny suggests that similar strains of NiV are co-circulating in sympatric reservoir species.

Keyword: Nipah virus; Bat; *Pteropus vampyrus* bats.
