Faculty: Science

Block Backward Differentiation Formulae (BBDF) method with variable step variable order approach (VSVO) for solving stiff Ordinary Differential Equations (ODEs) is described in this thesis. The research on Variable Step Variable Order Block Backward Differentiation Formulae (VSVO-BBDF) method is divided into two parts where the first part attempts to solve first order stiff ODEs, whereby second order stiff ODEs are considered subsequently. Initially, the computation of D^{th} -order variable step BBDF (VS-BBDF) method of order three up to five is presented. The detailed algorithms of VSVO-BBDF method is discussed to show the crucial parts of the order and stepsize selections. Prior to getting the numerical results, the MATLAB's suite of ODEs solvers namely ode15s and ode23s is applied for the numerical comparison purposes. Meanwhile, the consistency and zero stability properties that lead to the convergence of the method are also discussed. Finally, the implementation of the VSVO-BBDF(2) method for the solution of

second order stiff ODEs is analyzed. The derivation of the method of order two up to four, as well as the strategies in choosing the order and stepsize are elaborated. Similarly, numerical results are obtained after a fair comparison is made between VSVO-BBDF(2) and stiff ODEs solvers in MATLAB. In conclusion, the results display positive trends in reducing the total number of steps and increasing the accuracy of the approximations. The results also show that VSVO-BBDF method reduces the time execution for solving first and second order stiff ODEs as compared to MATLAB's ODEs solvers. Therefore, these methods serve the purpose of significant alternatives for solving stiff ODEs.

Abstrak tesis yang dikemukakan kepada Senat Universiti Putra Malaysia sebagai memenuhi keperluan untuk ijazah Doktor Falsafah

LANGKAH BERUBAH PERINGKAT BERUBAH FORMULA PEMBEZAAN BLOK KEBELAKANG UNTUK PENYELESAI PERSAMAAN PEMBEZAAN BIASA KAKU

Oleh

SITI AINOR BNTI MOHD YATIM

Julai 2013

Pengerusi: Zarina Bibi Binti Ibrahim, PhD

Fakulti: Sains

Kaedah Formula Pembezaan Blok Kebelakang (FPBK) dengan pendekatan langkah berubah peringkat berubah (LBPB) bagi penyelesaian kepada Persamaan Pembezaan Biasa (PPB) kaku dibincangkan di dalam tesis ini. Kajian mengenai Langkah Berubah Peringkat Berubah Formula Pembezaan Blok Kebelakang (LBPB-FPBK) terbahagi kepada dua bahagian dengan bahagian pertama tertumpu kepada penyelesaian PPB kaku peringkat pertama, dan seterusnya PPB kaku peringkat kedua. Pada permulaannya, komputasi kaedah Formula Pembezaan Blok Kebelakang langkah berubah peringkat ke- D (LB-FPBK) yang terdiri daripada peringkat ke tiga hingga ke lima dipaparkan. Algoritma terperinci kaedah LBPB-FPBK dibincangkan untuk menunjukkan bahagian penting pemilihan langkah dan peringkat. Bagi mendapatkan keputusan berangka, set penyelesai untuk PPB oleh MATLAB iaitu ode15s dan ode23s digunakan untuk tujuan perbandingan berangka. Manakala, ciri ketetapan dan keseimbangan-sifar yang menjurus kepada penumpuan kaedah turut dibincangkan. Akhir sekali, implimentasi kaedah LBPB-FPBK(2) untuk

penyelesaian PPB kaku peringkat kedua dianalisa. Derivasi kaedah peringkat kedua sehingga keempat, juga strategi dalam pemilihan peringkat dan langkah dihuraikan. Sekali lagi, keputusan berangka diperoleh setelah perbandingan secara teliti dibuat antara penyelesaian PPB oleh MATLAB. Kesimpulannya, keputusan mempamerkan tren positif dalam mengurangkan bilangan langkah dan meningkatkan ketepatan penganggaran. Keputusan juga menunjukkan kaedah LBPB-FPBK mengurangkan masa pelaksanaan untuk penyelesaian terhadap PPB kaku peringkat pertama dan kedua jika dibandingkan dengan penyelesaian PPB oleh MATLAB. Oleh itu, kaedah ini amat sesuai untuk dijadikan alternatif bagi menyelesaikan PPB kaku.

ACKNOWLEDGEMENTS

In the Name of Allah

The Most Beneficent, The Most Merciful

I sincerely thank Allah, my God, the Most Gracious, Most Merciful for giving me the strength to complete my Ph. D successfully.

I would like to express my deepest gratitude to none other than my supervisor, Associate Professor Dr Zarina Bibi Ibrahim, for her guidance, support, and constructive criticisms from the very beginning through to the completion of this thesis. Not forgetting the member of Supervisory Committee, YBhg. Prof. Dato' Dr. Mohamed bin Suleiman and Associate Professor Dr. Khairil b. Othman, I thank them for giving me the opportunity to widen the research on the Block Backward Differentiation Formula method. Without their knowledge and expertise this thesis would never have been completed.

I would like to express my sincere appreciation to my beloved family, who have been a great source of inspiration throughout my study. It was my parents all along, who believed in me and my dear husband who have helped me cling to my self-esteem. Special gratitude also goes to my colleagues, Nor Ain Azeany Nasir, and Noraini Zainuddin for their nice friendship and kind cooperation.

Finally, I would like to thank The Malaysia Ministry of Higher Education and Universiti Sains Malaysia for providing me with the scholarship during my study in UPM. The chance to study in UPM has always been a wonderful experience for me.

I certify that a Thesis Examination Committee has met on 2 July 2013 to conduct the final examination of Siti Ainor Binti Mohd Yatim on her thesis entitled "**Variable Step Variable Order Block Backward Differentiation Formulae for Solving Stiff Ordinary Differential Equations**" in accordance with the Universities and University Colleges Act 1971 and the Constitution of the Universiti Putra Malaysia [P.U.(A) 106] 15 March 1998. The Committee recommends that the student be awarded the degree of Doctor of Philosophy.

Members of the Thesis Examination Committee were as follows:

Mohamad Rushdan bin Md. Said, PhD

Associate Professor
Faculty of Science
Universiti Putra Malaysia
(Chairman)

Fudziah binti Ismail, PhD

Professor
Faculty of Science
Universiti Putra Malaysia
(Internal Examiner)

Nik Mohd Asri Bin Nik Long, PhD

Associate Professor
Faculty of Science

Date: 2 AUGUST 2013

This thesis was submitted to the Senate of Universiti of Putra Malaysia and has been accepted as fulfillment of the requirement for the degree of Doctor of Philosophy. The members of the Supervisory Committee were as follows:

Zarina Bibi Binti Ibrahim, PhD

Associate Professor
Faculty of Science
Universiti Putra Malaysia
(Chairman)

Dato' Mohamed Bin Suleiman, PhD

Professor
Faculty of Science
Universiti Putra Malaysia
(Member)

Khairil Iskandar Bin Othman, PhD

Associate Professor
Faculty of Computer and Mathematical Sciences
Universiti Teknologi MARA
(Member)

BUJANG KIM HUAT, PhD

Professor and Dean
School of Graduate Studies
Universiti Putra Malaysia

Date:

DECLARATION

I declare that the thesis is my original work except for quotations and citations which have been duly acknowledge. I also declare that it has not been previously, and is not currently, submitted for any other degree at Universiti Putra Malaysia or at any other institution.
