[57] ABSTRACT

Tin-zinc alloys can be electroplated from an aquialkaline solution containing an alkali metal zincate alkali metal stannate, and an alkali metal tartrate. electroplating bath is alkaline with a pH of 11 tc preferably 12.0 to 13.5.

Some adication of the inspective	Several thin-fifm analysis techniques (energy-dispersive x-ray analysis and Auger, Rutherford backscattering and non-resonance (d_{eq}) reactions) were used to assess the level of imparities incorporated during silver deposition in the presence and absence of additives. The study showed that the elemental constituents of the more strongly absorbed additives, i.e. brightners, were incorporated with the silver deposit. The levelling agents are less strongly absorbed and thus their constituents were not appreciably incorporated with the silver deposits.	
	mechanisms of action of levelle	is and brighteners is obtained.	NTRODUCTION	Energy-dispersive x-ray analysis
	INTRODUCTION This paper is concerned with ment and understanding o silver electropiating. Some baths are known to provide leveling, but ieveling relectro involving the smoothing of s profiles greater than Jum A number of feveling age- discovered, although they ar found than brighteners. In expense leveling is obtaine	bright silver were made up using bolled distilled water, a degree of de-acatate using cylinder nitrogen plating per se. (O ₂ -CO 05%). The bath contained: AGCN under emror 33.5gt ⁻¹ XCN 30gt ⁻¹ XCO 33gt ⁻¹ , at pH has not per his plage were made at room temperature (19°C). the state of the second second second second fact, in our Levelling experiments	The presence of impurities co-deposited with electro- deposited metal is an important factor in determining properties such as hardness, microstructure and dis- colouring rate. The knowledge of such impurities incorporated during electrodeposition may also be useful for the understanding of the development of properties such as leveling and brightening. The origin of such co-deposits is usually from the additives in the plating bath.	The investigations were carried out on a Philips 500 scanning electron microscope equipped with energy- dispersive x-ray analysis (EDX). The instrument pro- vides a semi-quantitative microprobe analysis of the deposits, and would identify elements if present above a detectable sensitivity of about $\sim 10^{-14}$ g in a virtual source volume of 1 µm ³ . For comparative purposes, the conditions of analysis were kept constant for each analysis, whereby counting of x-rays was for 30 s under fixed scanning conditions

1993 - 2000 1 PATENTS ACQUIRED

1997 FULLY COMMERCIALISED WORLDWIDE

Ψ

Why did we miss this opportunity in Nigeria?

The reasons follow:

LACK OF UNDERSTANDING OF THE IMPORTANCE OF STEM EDUCATION

Science, Technology, Engineering and Mathematics— STEM:

Vital to our future and shapes our everyday experiences.

- Science equips us with knowledge about our natural world
- Technology covers computers and smartphones, television, radio, and even the first wheel.
- Engineering encompasses buildings, roads, and bridges, and also tackles today's challenges like global warming.
- Mathematics is the cradle of all creations, it boosts our power of reasoning and problem-solving skills.

Need Policy For Developing Stempreneurs To Add Value By Creating Industry Solutions With Commercial Viability

When STEM meets entrepreneurship innovation happens

Nigeria needs Stempreneurs to develop from a consumer economy to a manufacturing economy

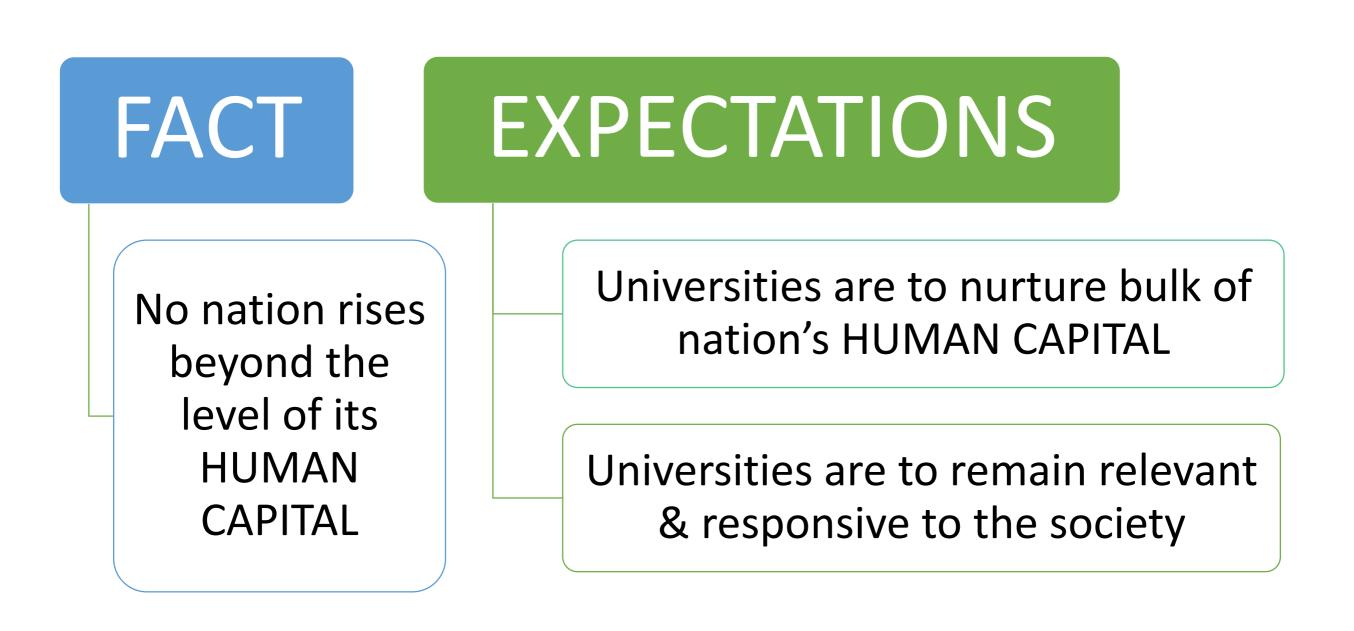

STEM graduates will develop sellable ideas, and build local industries Harness talents by putting in place suitable policies that will encourage STEM innovations

National Policy on Tertiary Education (2004)

Contribute to national development through high level relevant, manpower training

Develop the intellectual capability

Acquire skills for self-reliance and good citizenship

Engineering Education in Universities

138 Universities

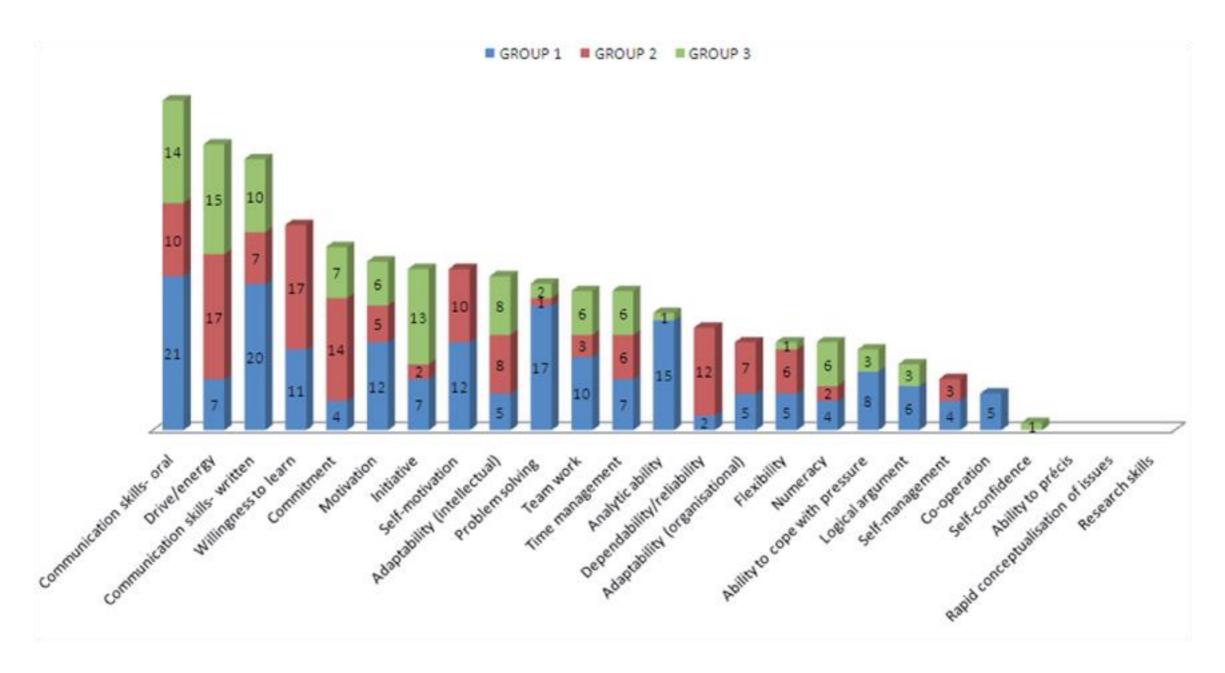

•40 Federal

•39 States

•60+ Private

47 offer COREN Accredited Programs

BEYOND THE CLASSROOMS: EMPLOYABILITY OF NIGERIAN GRADUATES

Credits: brunel.ac.uk

LARGE NUMBER OF GRADUATE ENGINEERS ARE UNEMPLOYABLE

No employment requirements

Highest rate of dissatisfaction observed by:

Thus, unsuccessful in securing or keeping jobs

Consulting Firms

Oil and Gas Sectors Engineering curriculum of 20th century no longer sufficient to address the engineering challenges of 21st century

- •Competencies now needed:
 - Analytical thinking
 - Problem solving
 - •Design

WHAT IS MISSING?

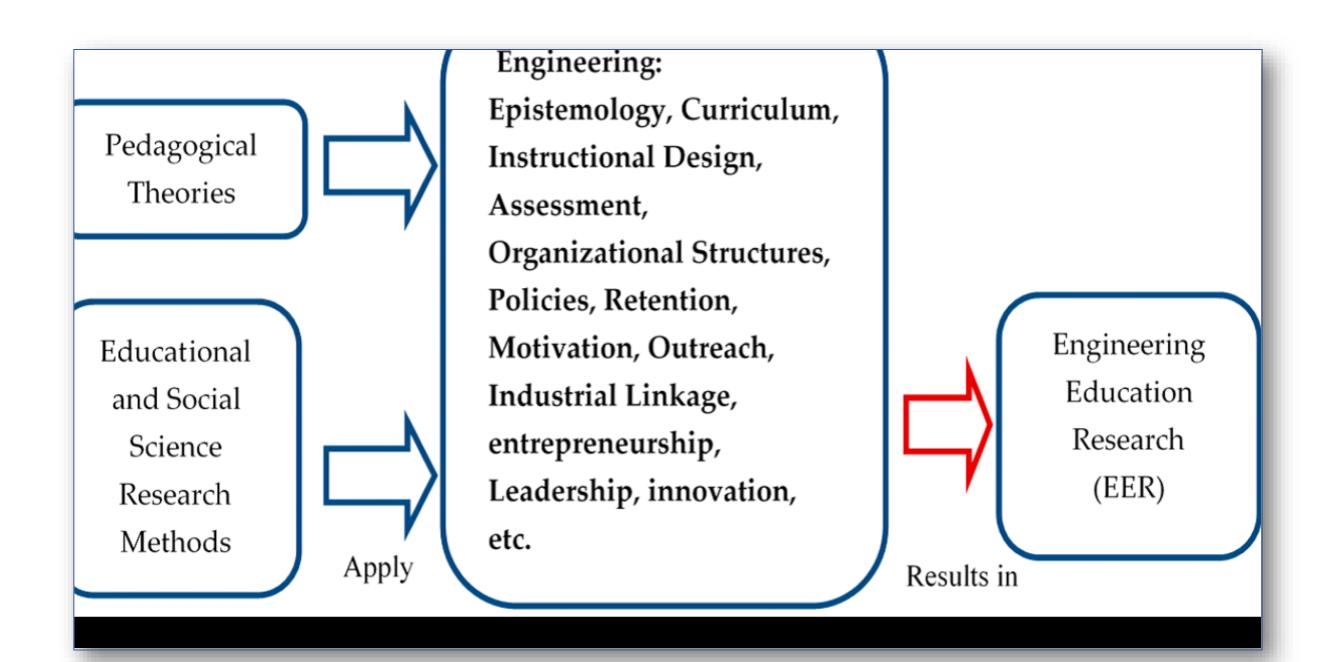

Graduates Inability to Work Independently

Low Critical and Analytical Thinking Skills

Education and Skills Mismatch with Labour Market Needs

Lag in Producing **Resourceful** Individuals

Training of Entrepreneur Engineers

Need for Organizational Entity in Engineering Schools for Driving Sustainable Development

- Technology Innovation and Engineering Education/Entrepreneurship (TIEE)
- Innovations to focus on two main pillars of sustainable developments:
 - Transformative engineering and technology human talent sustainable development
 - Technologies, products, services, innovations, and startups for shaping sustainable
 - Socio-economic development

LOCAL CONTENT ACT

Formulated to enhance local content in the oil and gas industry

To develop indigenous
 skills across the value chain

OUTCOME OF LOCAL CONTENT ACT

Slight growth from 4% in local content to 15% in the last few years

Still has **not** fulfilled **the critical manpower needs** in the sector

CHALLENGES WITH LOCAL CONTENT ACT

Most universities train students without the required practice opportunities in appropriate industries

Difficult to get the best of professionals from Nigeria

Dire need of Engineers with usable, practicable and modern skills to fill the spaces in the workforce

WHAT IS THE WAY FORWARD?

UNIVERSITY/INDUSTRY COLLABORATION:

BRIDGING THE VOID BETWEEN THEORY AND PRACTICE

Evolution of University-Industry Linkages

F	Phase	Success Factors	Drivers
Pre	-linkage	• Leading to an agreement to work together	
Esta	blishment	Leading to a contract	Communication

INDUSTRY INVOLVEMENT IN CURRICULUM DEVELOPMENT

REVAMPING OF EXISTING INTERNSHIP PROGRAMS

RESEARCH & DEVELOPMENT COLLABORATION

CSR-MOTIVATED DEVELOPMENT SCHEMES

UNIVERSITY INDUSTRY COLLABORATION (UIC)

USA (EXTENSIVE)

Successful Technological Innovation
Huge Economic Growth

NIGERIA (MINIMAL)

- Token, Informal & Individual Efforts
- Negligible Technology Transfer
- Low Economic Growth

FORMS OF UIC

1. CURRICULUM DEVELOPMENT

Course Planning, Design And Delivery

Formal Members of Course Advisory Panels

Encourage and Support inclusion of new areas of specialized skills

Support Course Contents that are Relevant for Future Employment Prospects

Ideas and Materials for Students' Projects

Guest Lectures

2. REVAMPING OF EXISTING INTERNSHIP PROGRAMS

Students' Industrial Work Experience Scheme

(SIWES)

After more than **40 years** has not provided adequate avenues for acquisition of industrial skills and experience

CHALLENGES OF SIWES

Misplacements of Students

 Engineering student intern in for example a fashion house

Lack of Proper Supervision by the Institutions

 Students just get logbooks signed off without working

Rejection of Interns

 Due to lack of suitable and sustainable UIC

Internship needs to be focused on hands-on skills on handling equipment and machinery

Close monitoring by university staff and industry staff

Alumni Support for Internship Placements

Proper placement of students in industries with the right technologies

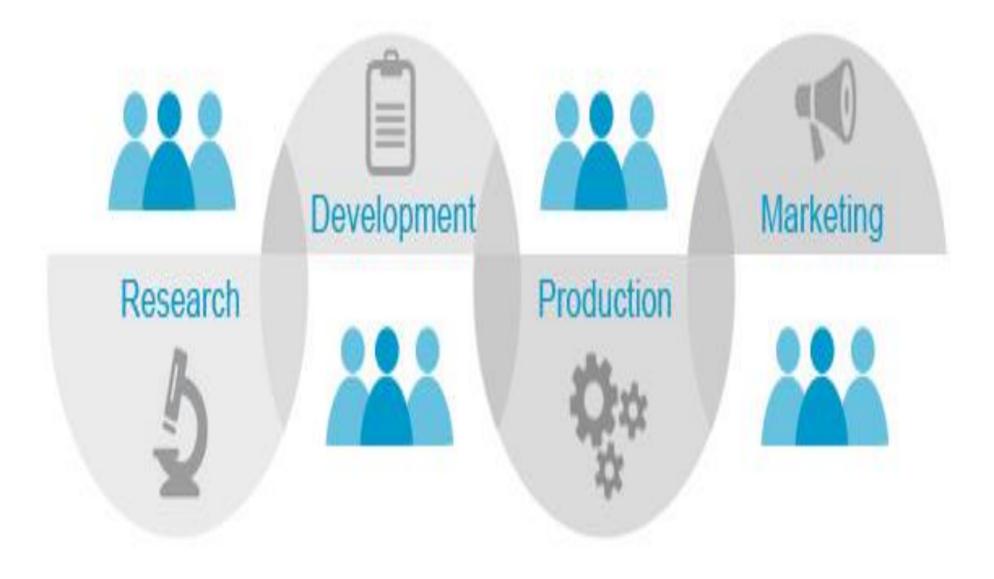

3. RESEARCH & DEVELOPMENT COLLABORATION

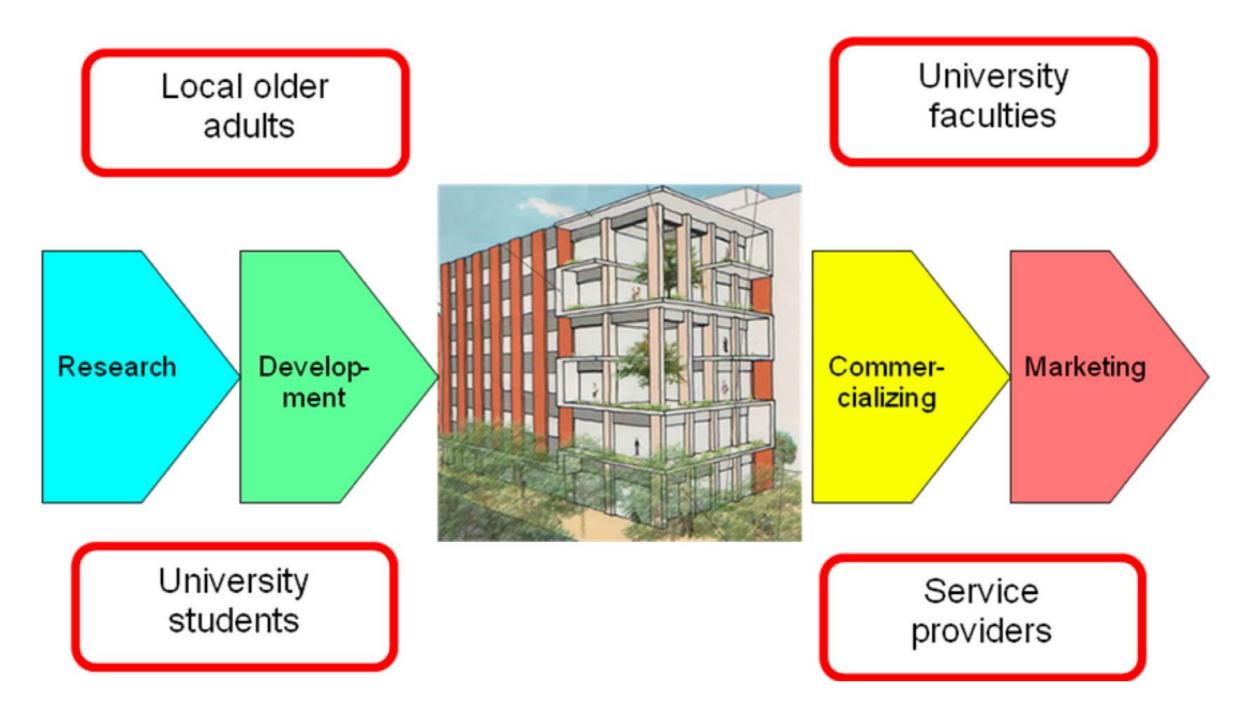

R&D Collaboration requires a sustainable system

University provides support and value for the business objectives of industries

Industries in turn provide the universities with funding and market-tested skills transfer to help develop the students

Smart Aging Square

UIC: MOTIVATION FOR UNIVERSITIES

Upgraded structures and grants for faculty members

Spin-off companies that financially benefit researchers and university

Enhancement of teaching

Job offers for graduates

Stimulation of entrepreneurial culture in the institution

UIC: MOTIVATION FOR INDUSTRIES

Access to new ideas and technologies that create competitive advantage

Reduction in R&D budget

Access to highly specialized university facilities

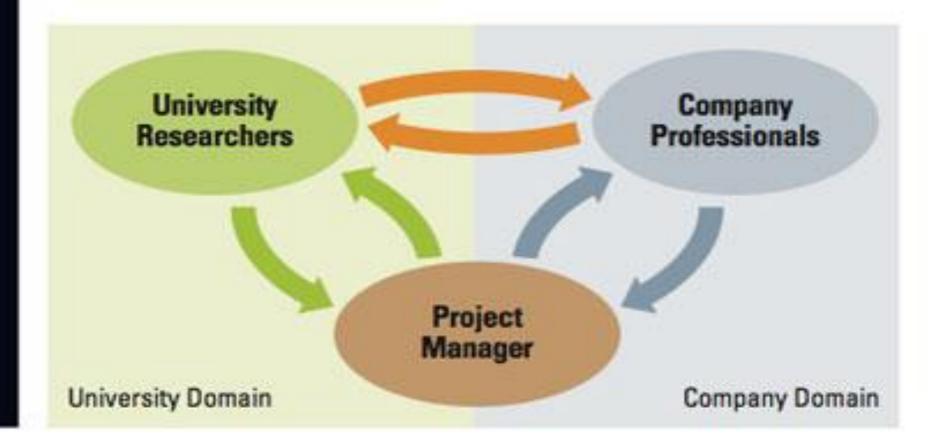

Access to research and consulting services of the university

Improved public image

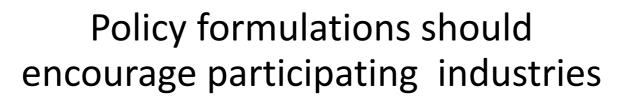

Less hassle with graduate (ready-to-go) recruitment

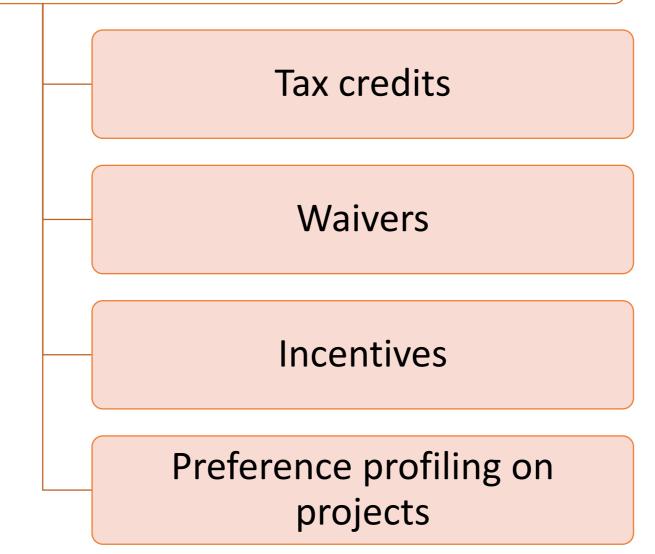

KNOWLEDGE EXCHANGE PATHS IN INDUSTRY-UNIVERSITY COLLABORATION

An effective communications framework can help bridge the gap between outcome and impact. It is important to have two-way knowledge transfer between the university researchers and the company's project manager (green arrows), as well as between the project manager and others in the company (blue arrows). In addition, the project manager should keep groups inside the company abreast of progress on the research collaboration, and inform the university team of ideas from the company regarding potential linkages to other company activities (orange arrows).

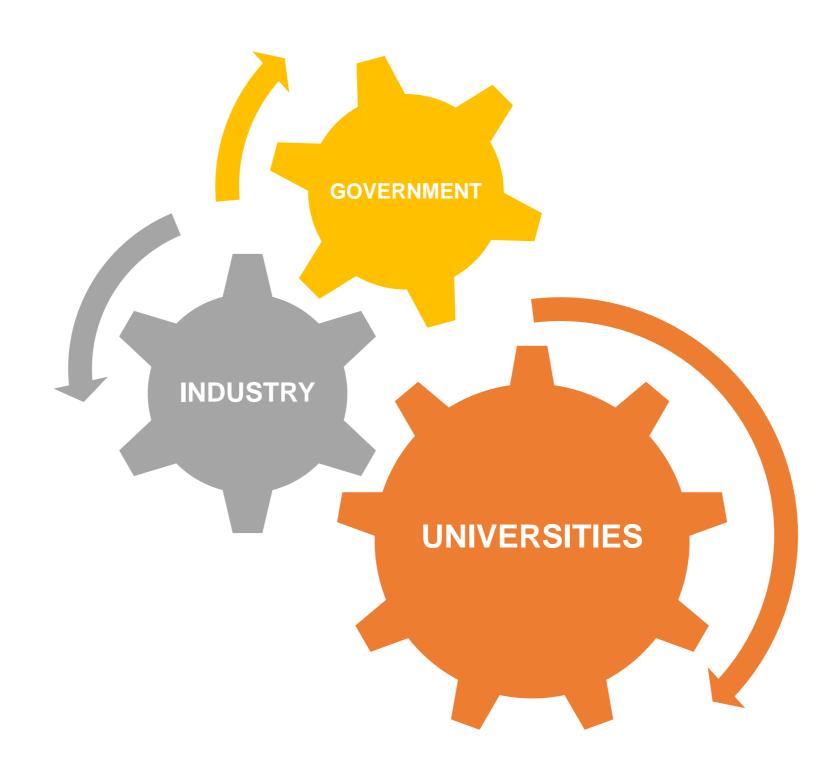

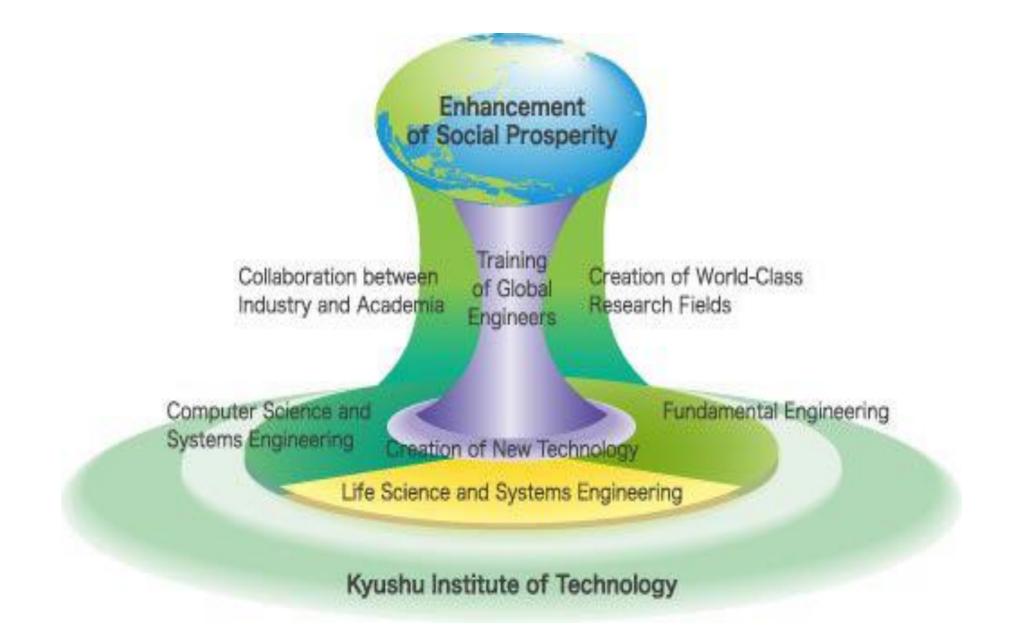

THE GOVERNMENT FACTOR

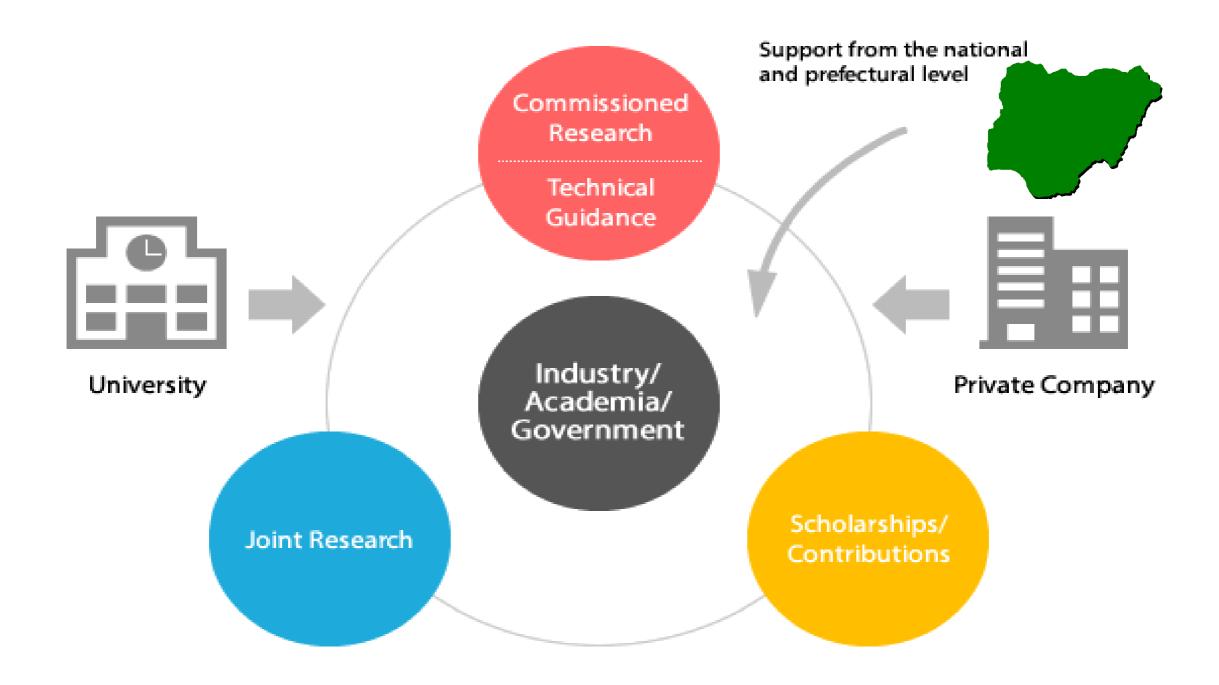

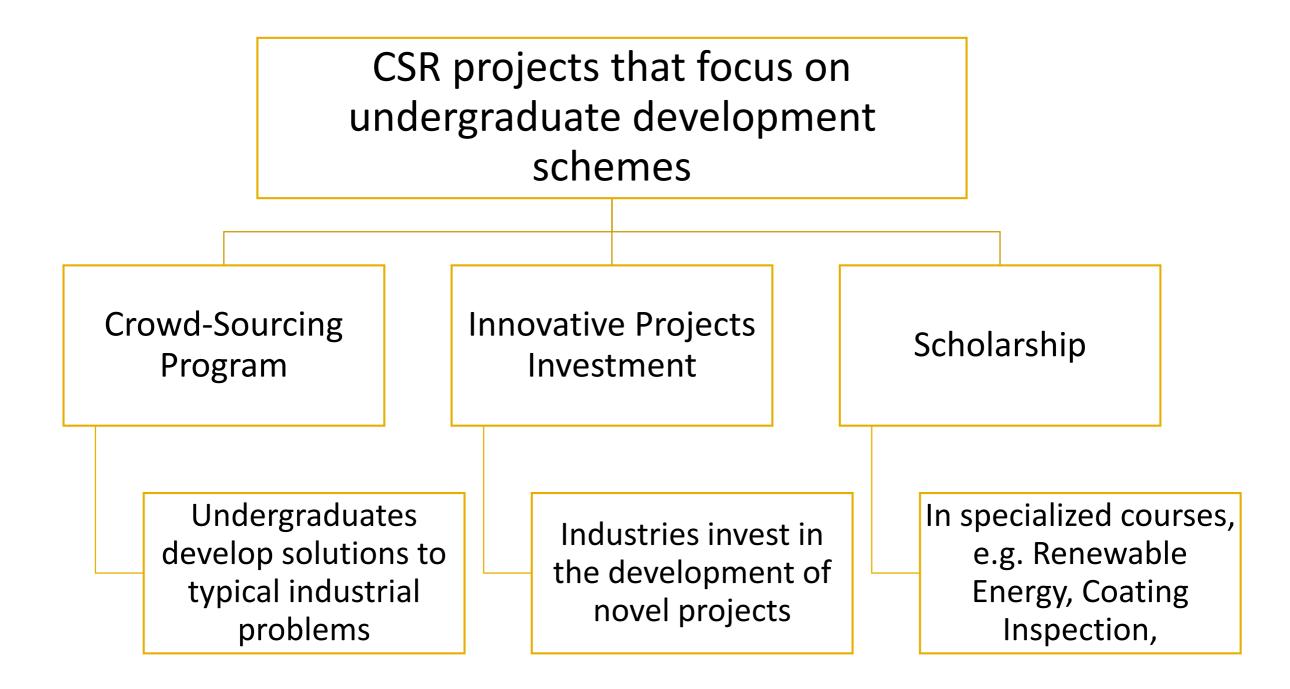

THE MESH

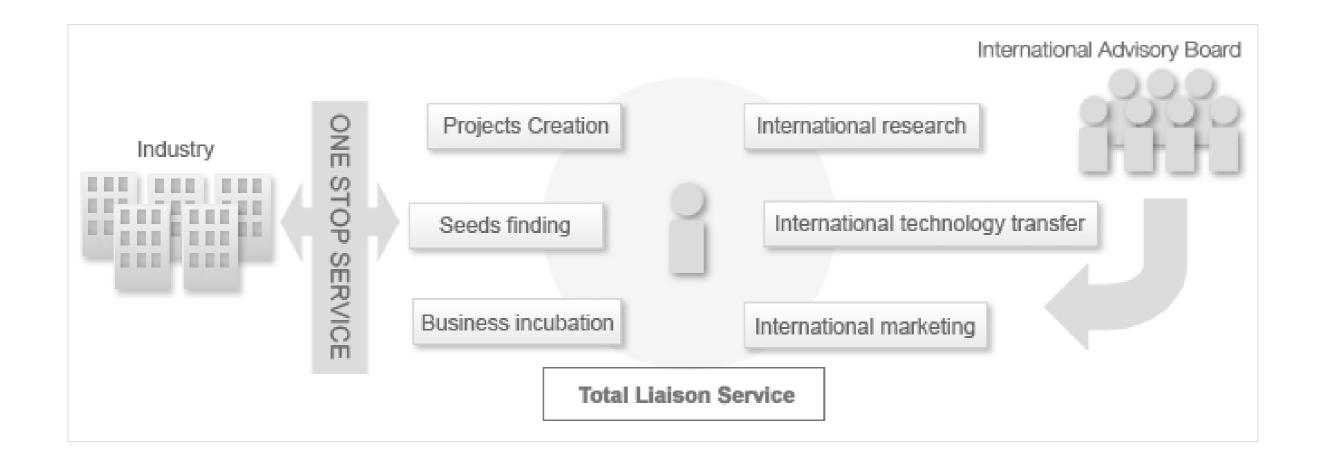

4. CSR-MOTIVATED DEVELOPMENT SCHEMES

Global Approach

CASE STUDIES OF SUCCESSFUL PROGRAMS WORLDWIDE

UNIVERSITY OF Cincinnati

A collaborative effort that developed a center of expertise in computer simulation called the UC Simulation Center.

Procter & Gamble and the University of Cincinnati: UC Simulation Center

Opened Sept. 22, 2008

Currently staffed with nine students from UC's College of Engineering:

Has seed funding for two years from three different organizations within P&G

UC students work side by side with P&G engineers, providing them with unusual opportunity of developing industry-ready skills and capacities that are in hot demand

A \$25 million annual investment by Dow Chemical Company at UC established the Dow Materials Institute (DowMI)

DOW Chemical Company and University of California, Santa Barbara

Researchers from across UCSB's Chemistry, Materials Science, and Engineering departments work on fundamental challenges to world problems that are of interest to industry and academia

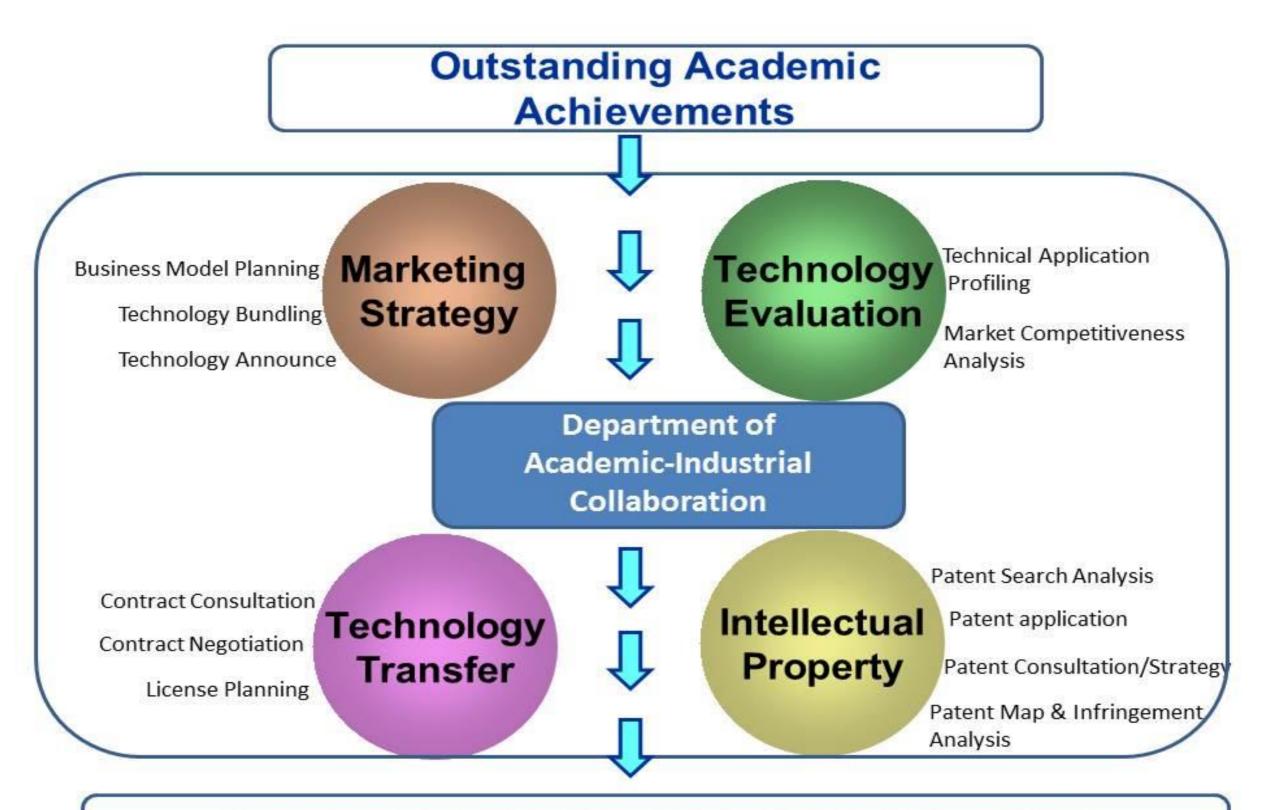

Students are prepared for careers in industry by instilling work practices and safety awareness levels consistent with those found in the private sector Education and training of students and postdocs and their development in highly interdisciplinary, collaborative teams

DOW Chemical Company and University of California, Santa Barbara

The Dow Discovery Fellowships for outstanding chemical engineering graduate students

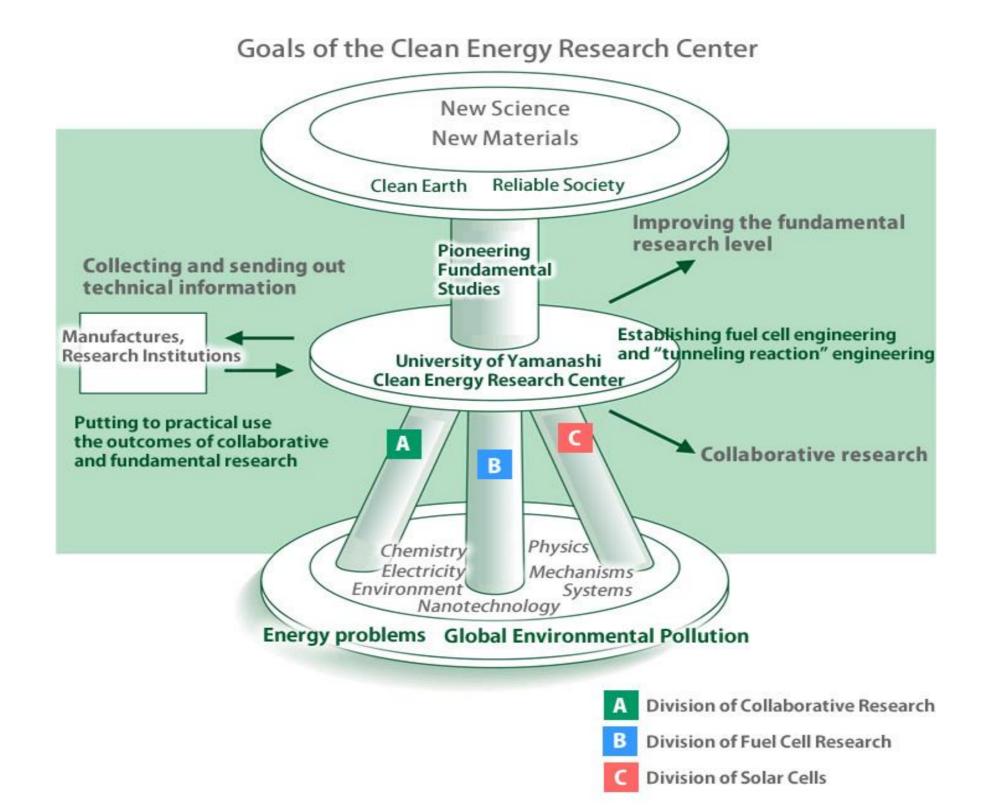

> Fosters a number of ties with students on campus through efforts such as the Dow-UCSB Safety Initiative

Engaging the campus' entrepreneurial community through its funding of an entrepreneurial program for UCSB students

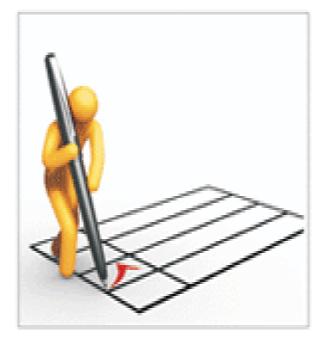

Commercialization & Industrialization

University of Yamanashi – Clean Energy Program

WRAP-UP

Let's EDUCATE our students for brilliant futures Let's PREPARE our students for the industry Let's ENTHUSE patriotic fervour & pride for our heritage in our students

Let's INSTIL discipline, integrity and honesty in our students

Let's EMPOWER our students with great communication skills

Let's INCULCATE team spirit & camaraderie among our students

Let's FOSTER civic engagement in our students Let's ENCOURAGE our students to think out of the box

Let's STIMULATE scholarly energy and diligence in our students Let's TEACH our students to become globally competitive

Let's INFUSE leadership skills in our students Let's INGRAIN spirit of entrepreneur among our students
