⁴ESS Neutronics Group, Sweden

- Monte Carlo neutron ray tracing engine
- Release 1.1 (1.2 beta available for linux)
- Portable code (Unix/Linux/Mac/Windows, 32 and 64 bit support)
Has run on all from iPhone to 1000+ node clusters (including FERMI)

Project website at
<http://www.mcstas.org>

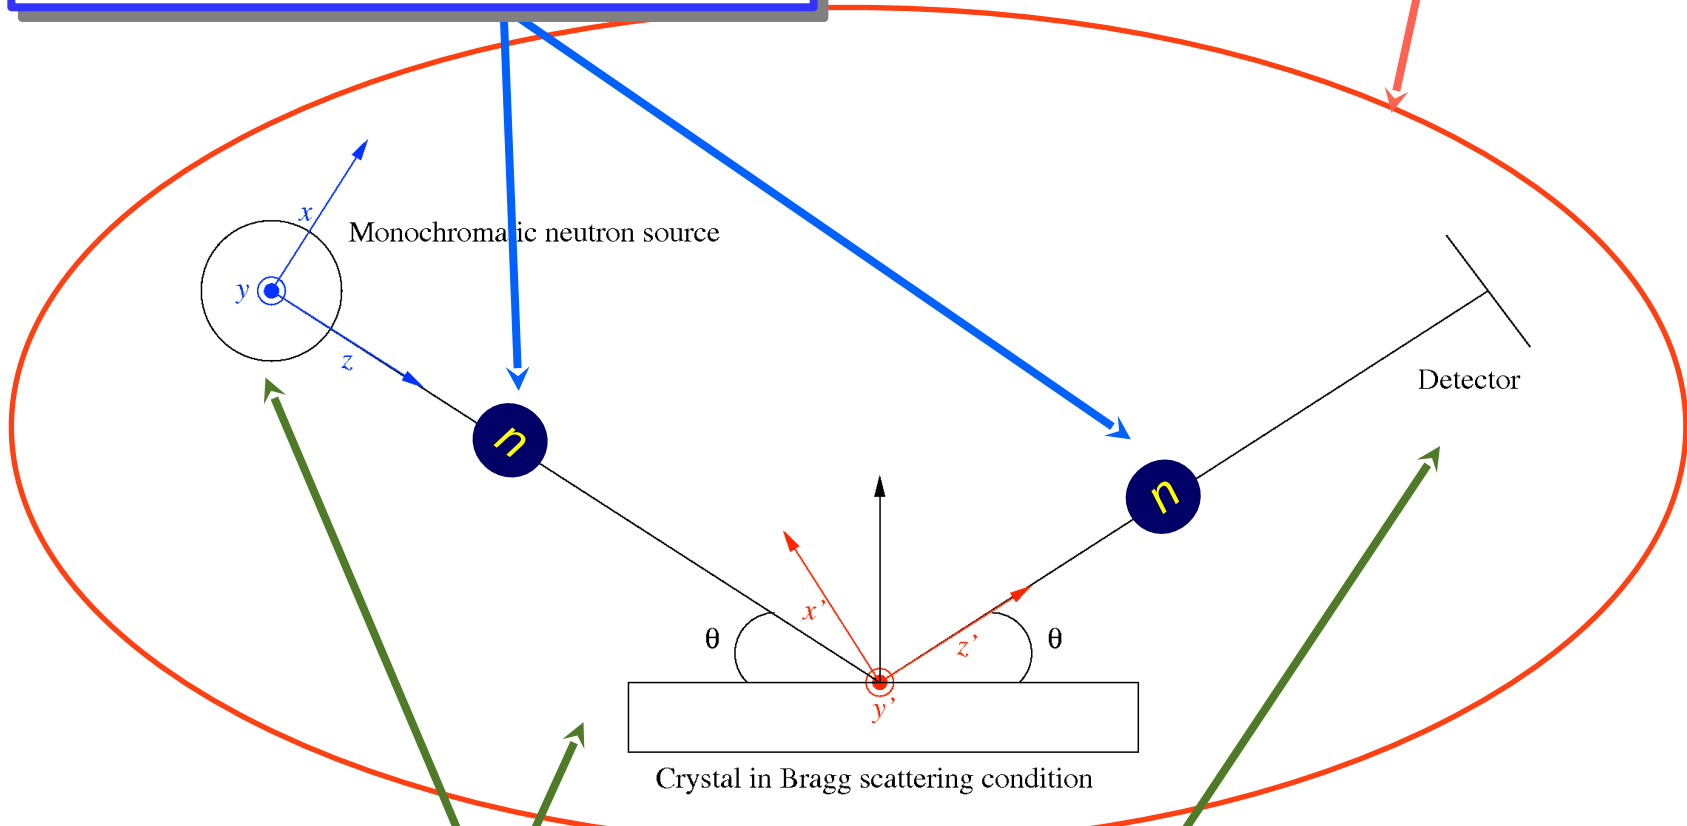

Project mailing list at
mcstas-users@mcxtrace.org

- GPL-license
- DSL / Compiler Technology.
Using Lex & Yacc
- Modular Open Structure.
Components/devices written in structured ISO-c automatically fits in the system
- Dependencies: c-compiler (perl/tk for gui).
- Permanent staff at DTU Physics maintaining the code

McStas overview

Neutron ray/package
 Weight (p): # neutrons (left) in the package
 Coordinates (x,y,z)
 Velocity (v_x, v_y, v_z)
 Spin (s_x, s_y, s_z)

Instrument: positioning + transformations
 between sequential component coordinate
 systems, e.g. neutron source, crystal, detector

Components: Where neutron physics happen,
 Weights adjusted according to scattering
 cross sections etc.

Independent geometrical entities with local
 Internal coordinate systems.

NEUTRON STATE ($x, y, z, v_x, v_y, v_z, t, s_x, s_y, s_z, p$)

- ONLY neutrons
- Validity determined by the code in the components.
- (Epi)Thermal to cold neutrons
 - No high energy stuff
- Structured materials

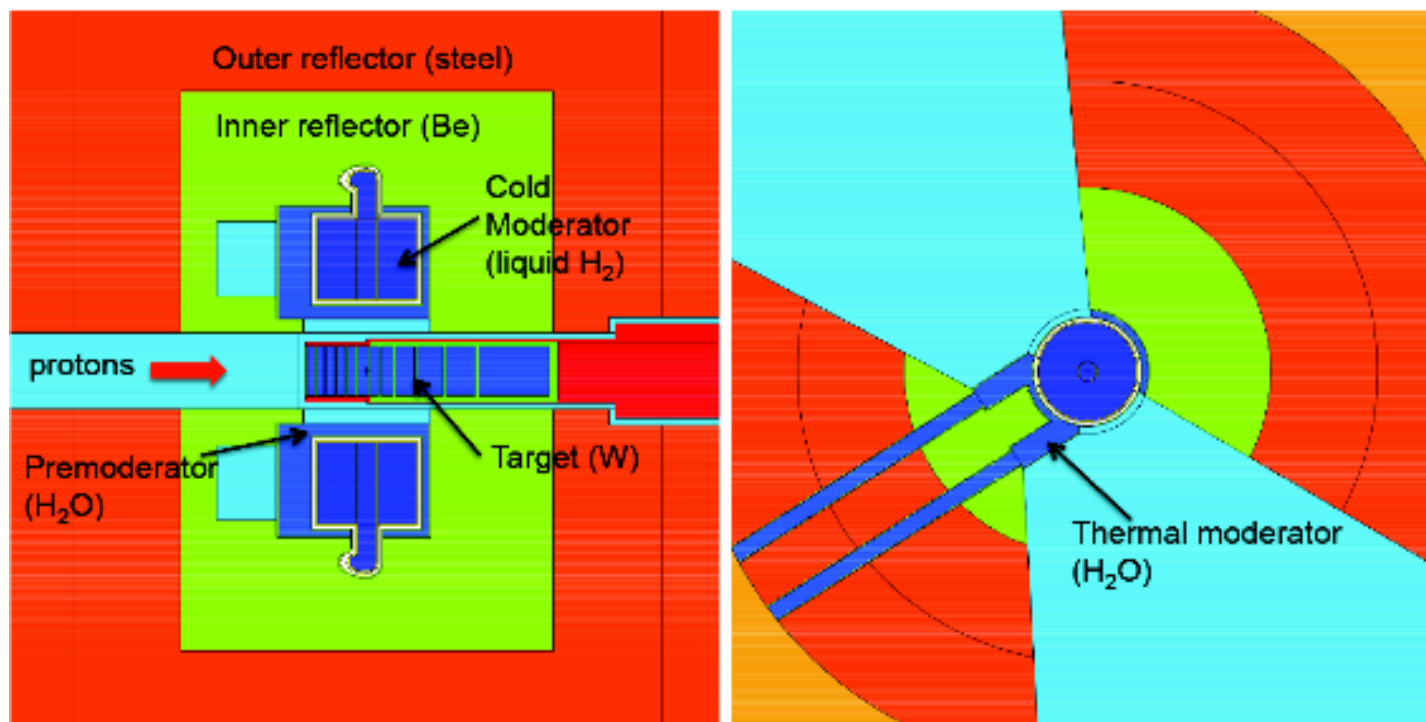

- Distributed “Freely” by RSICC.
- Source code available.
- Restrictive licensing-terms.
- Parallelism through MPI: MCNP6/MCNPx (most functionality)

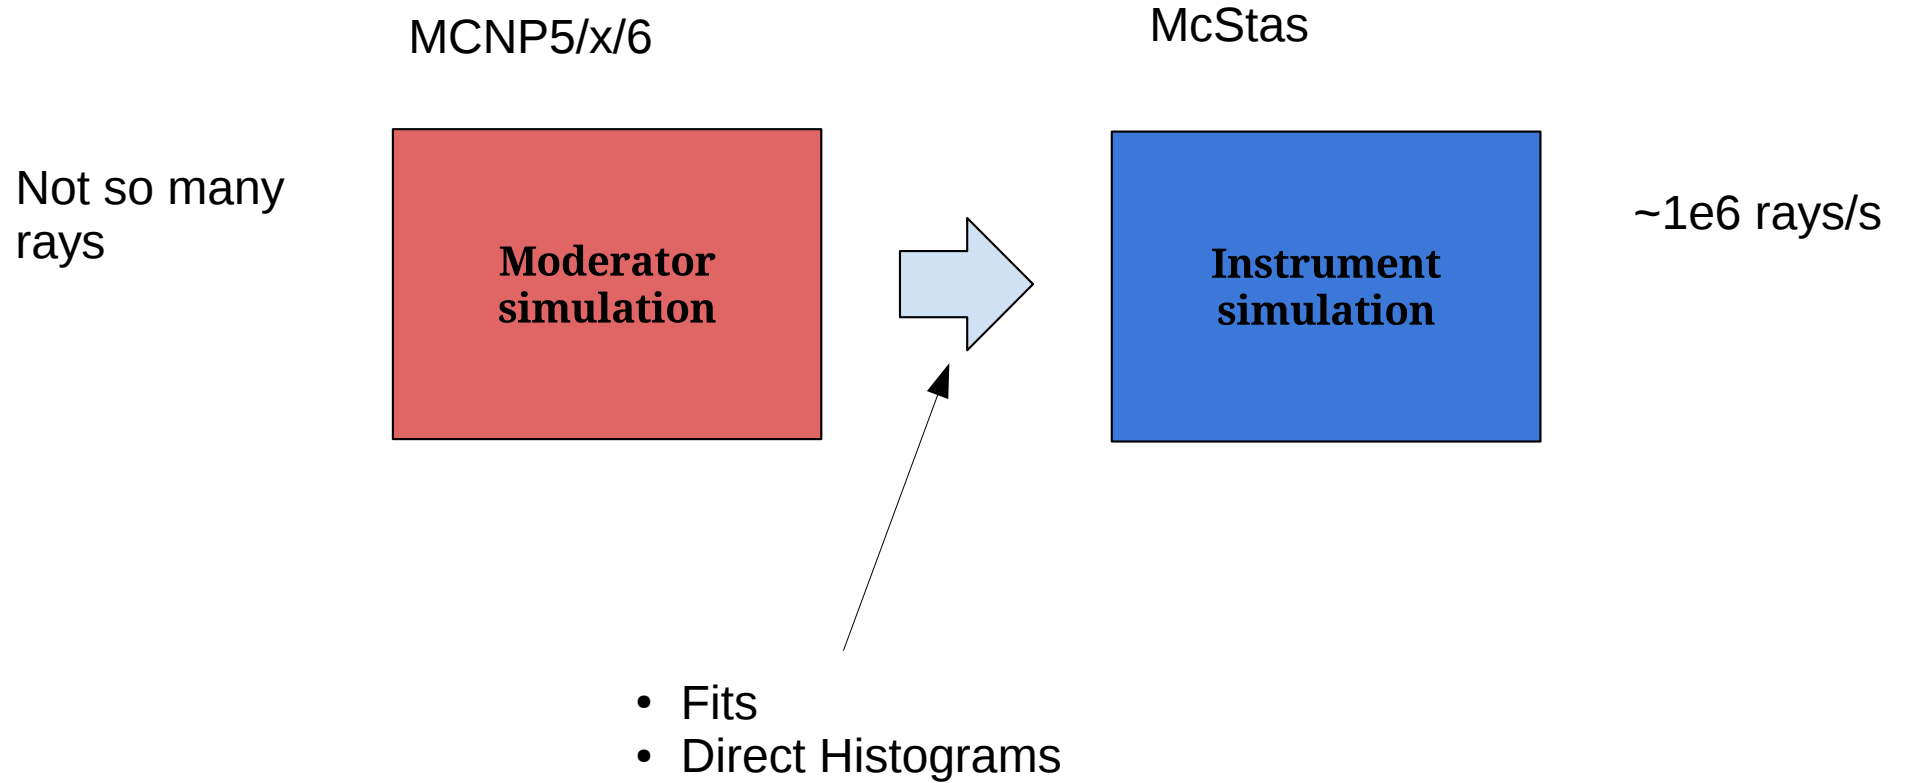

- Not restricted to neutrons (MCNPx / MCNP6)

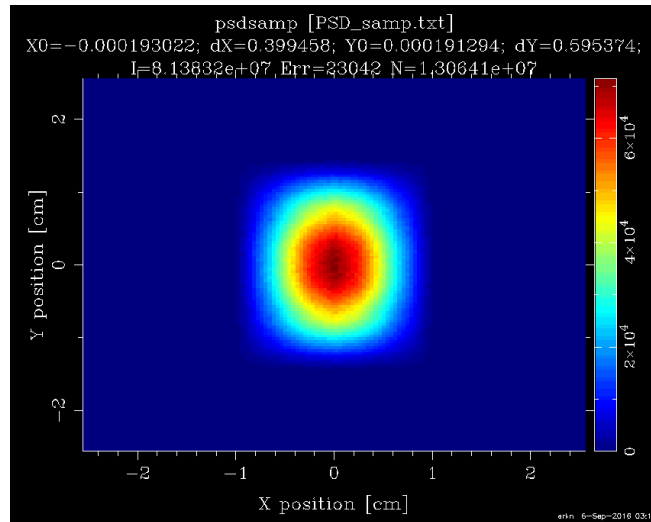

NEUTRON STATE ($x, y, z, v_x, v_y, v_z, t, p$)

- Materials: Everything is a gas
- $E < 150$ MeV
- Sense of p slightly different: $p < 1$
- Particle conversions possible

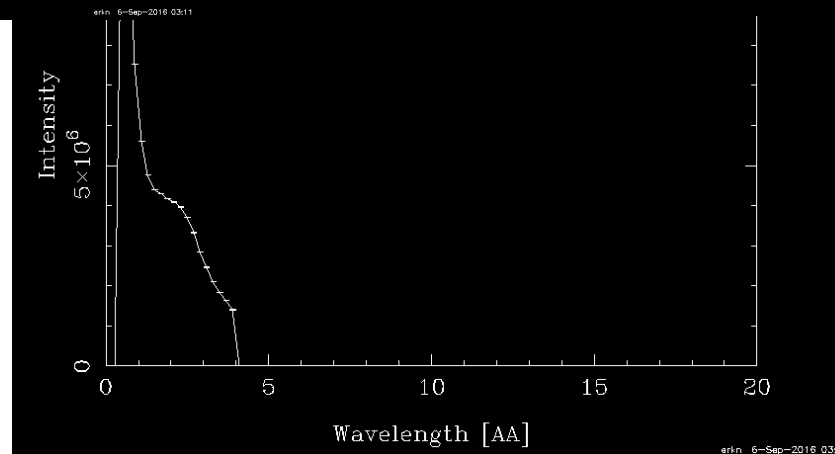

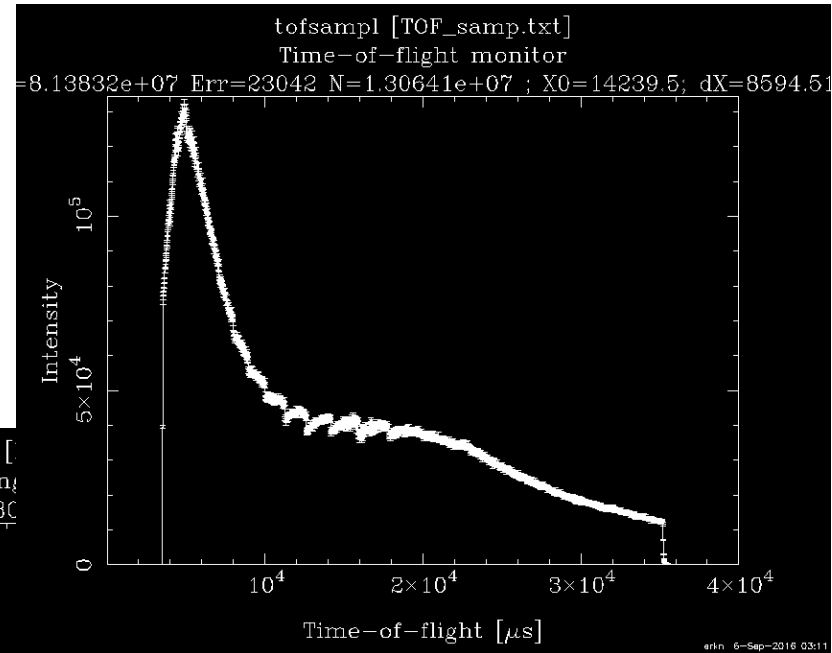

- ISIS_moderator
- SNS_source
- ESS_moderator/butterfly

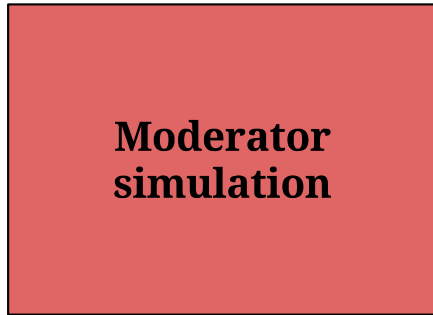

lsamp [
Wavelen
Err=23042 N=1.30

- Fits
- Direct Histograms

MCNP5/x/6

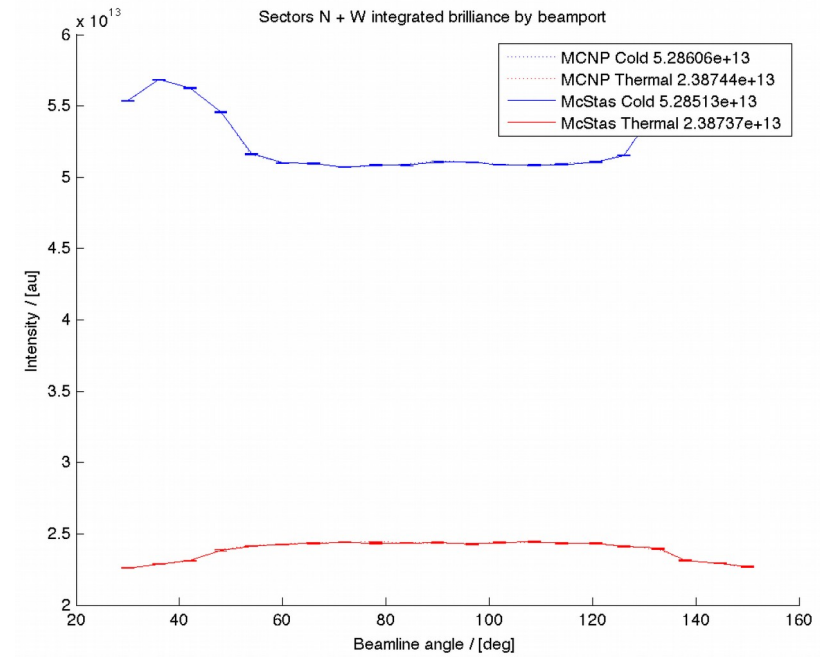

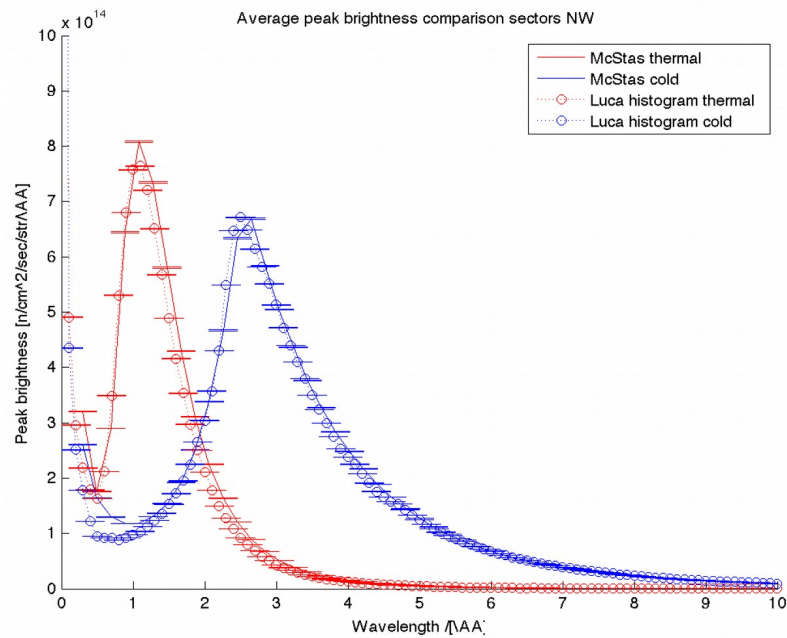

McStas

Scatter_logger / SSR/W
Using escaped neutrons

MCNP5/x/6

- 1) Tallys and Fits (traditional, typically uniform emission same spectrum everywhere)
- 2) Ptrac-files
- 3) Combined compilation
- 4) SSW/SSR
- 5)

- Fast
- Robust

- No reentry
- Highly dependent on quality of documentaion

- MCNPx outputs an ascii file containing neutron states.
- This file may be read by McStas MCNP_virtual_input

- Fast

- No reentry
- No MPI
- Large ascii files ~.2kB/event
- Only 1 ptrac surface allowed

Ptrac format

```

Source Surface Write/Read in MCNP stops/starts simulations at a given logical point.

Neutron state is written to a binary file

McStas Components:

MCNP_Virtual_ss_Input & MCNP_Virtual_ss_Output

- Flexible
 - Access to full McStas functionality
 - Access to full MCNPx functionality
- Reentrant (but limited)

- Big files ~.1kB/event
- Proprietary binary format (diff. MCNPx & MCNP6)

Prototype exists for MCNPx

- McStas entry surface defined in MCNPx
- Neutrons crossing the surface trigger a McStas simulation.
- Upon reentry the neutron state is updated.
-

- Flexible
 - Access to full McStas functionality
 - Access to full MCNPx functionality
- Reentrant

- Slow
- Requires MCNP source code
- Licensing Issues
- Not al all user-friendly

PROTOTYPE Exists for MCNPx

I. Neutrons generated with MCNPX

→ II. Handed to McStas through SSW interface [1]

III. Unreflected neutrons returned to MCNPX for dose-rate calculation

- I. Neutrons generated with MCNPX
- II. Handed to McStas through SSW interface [1]
- **III. Unreflected neutrons returned to MCNPX for dose-rate calculation**

At each scattering:

Incomming state: $n_{in} = (\mathbf{x}, \mathbf{v}_{in}, t, w_{in})$

Transmitted state: $n_{trans} = (\mathbf{x}, \mathbf{v}_{in}, t, w_{trans})$

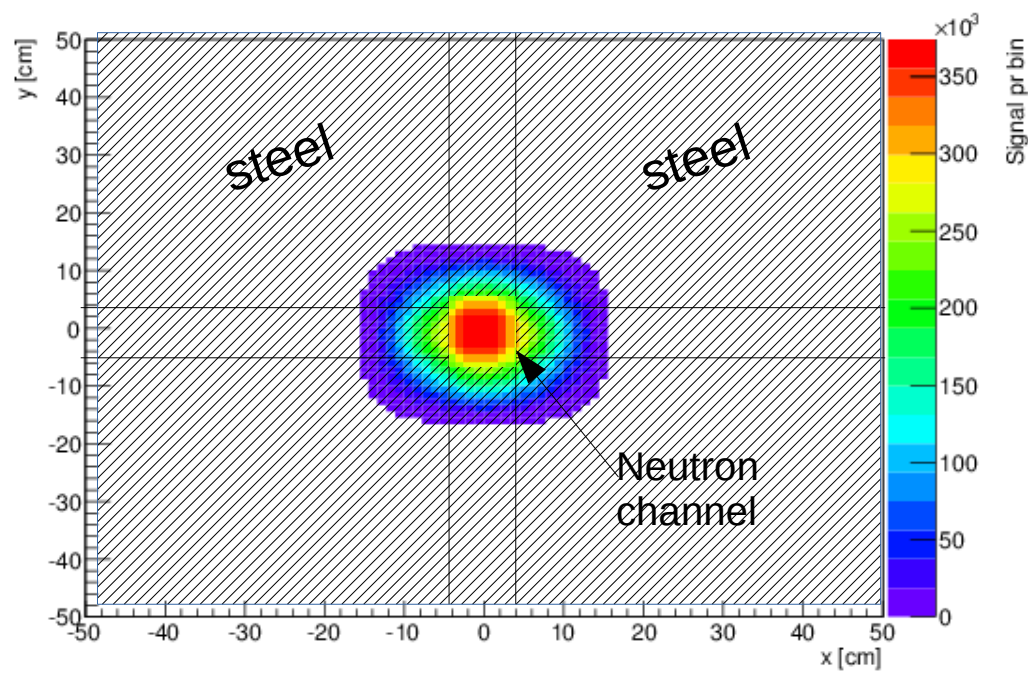

Reflected state: $n_{refl} = (\mathbf{x}, \mathbf{v}_{out}, t, w_{in} - w_{trans})$

- I. Neutrons generated with MCNPX
- II. Handed to McStas through SSW interface [1]
- **III. Unreflected neutrons returned to MCNPX for dose-rate calculation**

Guide end overilluminated by energetic neutrons

Straight guide

Curved guide ($r_{\text{curvature}} = 1500\text{m}$)

Line-of-sight lost

- Dose-rates, measured 5cm in the steel converted from flux according to official Swedish radiation protection procedures

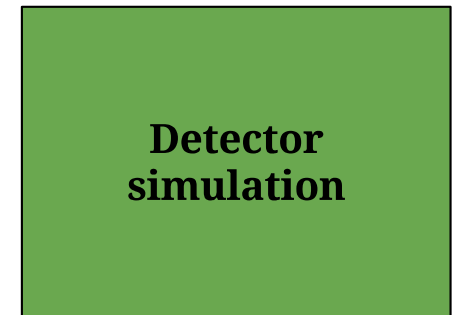

MCNP5/x/6
